> FCC INVESTIGATION LEADS TO FINE
> FOR LICENSED AMATEUR RADIO OPERATOR
>
> I. INTRODUCTION
> 1. In this Memorandum Opinion and Order (``Order''), we deny Leonard
Martin's
> petition for reconsideration and affirm the Forfeiture Order1 issued

against
> Leonard D. Martin in the amount of four thousand dollars ($4,000) for
willfully
> and repeatedly violating Sections 301 and 303(n) of the Communications Act
of
> 1934, as amended (``the Act''). 2 The noted violations involve Mr.
Martin's
> operation of a two-way radio station without Commission authorization and
his
> refusal to allow inspections of his radio installation.
>
> 2. On March 3, 2000, the Houston Resident Agent Office (``Houston
Office'')
> issued a Notice of Apparent Liability for Forfeiture (``NAL'') in the
amount of
> seventeen thousand dollars ($17,000) to Mr. Martin for the referenced
> violations.3 Mr. Martin filed a response to the NAL. On July 12, 2000, the
> Enforcement Bureau (``Bureau'') released a Forfeiture Order reducing the
> proposed forfeiture to $4,000.
>
> II. BACKGROUND
> 3. Mr. Martin is the former licensee of amateur station KC5WHN. By letter
of
> November 3, 1998, the Commission notified Mr. Martin of complaints
concerning a
> station identifying as KC5WHN. The complaints asserted that the station
> identifying as KC5WHN was operating on frequencies which were not
authorized
> for that station. In his telephone response to that letter, Mr. Martin
denied
> the alleged unauthorized operation.
>
> 4. On February 27, 1999, an agent from the Houston Office (``the agent''),
> using a mobile automatic direction finding (``MADF'') vehicle, observed
voice
> radio transmissions on frequencies 27.535 and 27.545 MHz. Frequency 27.535
MHz
> is allocated exclusively to Industrial radio stations. Frequency 27.545
MHz is
> allocated exclusively to United States Government radio stations. The
> transmissions were unidentified, but the operator responded to the name
> ``Leonard.'' Using the MADF vehicle, the agent determined that the source
of
> the transmissions was an antenna mounted on the residence at 4415
Spellman,
> Houston, Texas, which was then the address of record for Mr. Martin's
amateur
> service station. There was no record of a Commission authorization
permitting

> Mr. Martin to operate on 27.535 MHz or 27.545 MHz.
>
> 5. On March 15, 1999, the agent, using an MADF vehicle, observed voice radio
> transmissions on 27.370 MHz, a frequency allocated as a ``guard'' frequency
> between authorized channels in the Citizens Band Radio Service. The operator
> identified himself as ``Leonard.'' Using the MADF vehicle, the agent determined
> that the source of the transmissions was a vertical antenna mounted on the
> residence at 4415 Spellman, Houston, Texas. Immediately after his monitoring
> observations, the agent knocked on the door of the residence. Mr. Martin
> answered the door and refused the agent's request to inspect the radio station
> located in the residence. The agent informed Mr. Martin that his previously
> observed operation on 27.535 and 27.545 MHz was unlicensed and in violation of
> Section 301 of the Act because Mr. Martin held no Commission authorization to
> operate on those frequencies. The agent also informed Mr. Martin that his
> refusal to allow an inspection constituted violation of Section 303(n) of the
> Act.
>
> 6. On April 2, 1999, the Houston Office issued Mr. Martin an Official Notice of
> Violation (``NOV'') for violations of Sections 301 and 303(n) of the Act. In
> Mr. Martin's April 7, 1999, response to the NOV, he stated: ``I now fully
> understand that operation on the frequencies outlined is a violation ... that
> the FCC has the authority to inspect all radio installations... [and] ... I
> promise no further action by the Commission will be necessary to insure my
> complete compliance with the FCC Rules....''
>
> 7. On July 22, 1999, Mr. Martin submitted his amateur service license for
> KC5WHN to the Commission for cancellation. By letter of July 23, 1999, the
> Commission acknowledged receipt of the license, and confirmed that it was
> cancelled effective July 23, 1999. The letter also warned Mr. Martin that any
> unlicensed radio operation would constitute violation of Section 301 of the
> Act.
>
> 8. On October 19, 1999, the agent investigated an interference complaint

> against Mr. Martin. The agent, using an MADF vehicle, observed voice radio
> transmissions on frequency 27.535 MHz, and determined that the source of
those
> transmissions was a vertical antenna mounted on Mr. Martin's residence, at
4415
> Spellman, Houston, Texas. This frequency is allocated exclusively to
licensed
> Industrial radio stations. There was no record of a Commission
authorization
> permitting Mr. Martin to operate on 27.535 MHz.
>
> 9. On October 26, 1999, the agent, using an MADF vehicle, observed voice
radio
> transmissions on 27.455 MHz, a frequency allocated exclusively to
Industrial
> radio stations. Using the MADF vehicle, the agent determined that the
source of
> those transmissions was a vertical antenna mounted on Mr. Martin's
residence,
> at 4415 Spellman, Houston, Texas. There was no record of a Commission
> authorization permitting Mr. Martin to operate on 27.455 MHz. Immediately
after
> the monitoring, the agent knocked on the door of the residence and
requested
> permission to inspect the station located there. Mr. Martin, who answered
the
> door, refused to allow an inspection.
>
> 10. On March 3, 2000, the Houston Office issued a NAL in the amount of
$17,000
> to Mr. Martin for violations of Sections 301 and 303(n) of the Act. In his
> response to the NAL, Mr. Martin requested cancellation of the proposed
> forfeiture but did not deny violating Sections 301 and 303(n).
>
> 11. In its Forfeiture Order, released July 12, 2000, the Bureau concluded
that
> Mr. Martin willfully and repeatedly violated Section 301 of the Act by
> operating radio transmitting apparatus without authorization on February
27,
> October 19, and October 26, 1999; and that he willfully and repeatedly
violated
> Section 303(n) of the Act by refusing to make his radio installation
available
> for inspection on March 15 and October 26, 1999. The Forfeiture Order
assessed
> a monetary forfeiture of $4,000 for those violations. The sole basis for
> reducing the $17,000 forfeiture amount proposed by the NAL to $4,000 was
Mr.
> Martin's inability to pay more than $4,000.

>
> 12. In his petition for reconsideration of the Forfeiture Order, Mr.
Martin
> still does not deny operating radio transmitting apparatus without
> authorization or refusing to make his radio installation available for
> inspection. However, he propounds the following arguments for reduction or
> rescission of the forfeiture:
>
> (a) The Commission ``failed to comply with its own procedures.''
Specifically,
> Mr. Martin asserts that, when an FCC agent requested permission to inspect
his
> radio installation, the agent ``did not provide [Mr. Martin] proper notice
to
> inspect [Mr. Martin's] communications devices or of any pending
investigation,
> or allow [Mr. Martin] an opportunity to have an attorney present'' and did
not
> allow sufficient time for Mr. Martin ``to exercise [his] rights as a U.S.
> Citizen to review any FCC rule or federal law that would permit
unwarranted
> entry into [his] residence by the FCC.''
>
> (b) The Forfeiture Order ``is based upon unsubstantiated allegations with
> insufficient evidentiary support.'' In particular, Mr. Martin contends
that
> another station near his residence ``could have been'' the source of the
> transmissions observed by the FCC agent and that there is insufficient
proof
> that Mr. Martin was the operator the station observed by the FCC agent.
>
> (c) The forfeiture amount is ``grossly disproportionate to the alleged
> violations.'' Specifically, Mr. Martin asserts that the forfeiture amount
of
> $4,000 is unreasonable ``given the nature and extent of the alleged
> violations.'' Mr. Martin also contends that the Bureau did not consider
all the
> required mitigating factors. According to Mr. Martin, these include: the
number
> of occurrences; the corrective measures Mr. Martin agreed to take; Mr.
Martin's
> ability to pay; and ``the fact that no licensed radio station complained
of
> interference nor was there any proof of actual harm caused by any radio
> transmission from [Mr. Martin's] residence.''
>
> (d) The Commission, by imposing a forfeiture against Mr. Martin, has
exceeded
> its authority to regulate interstate communications under the Commerce

Clause
> of the Constitution. Mr. Martin argues that, although Section radio
> communications within one state as well as between states, the statute
must be
> interpreted and applied in a manner consistent with constitutional
limitations.
> In particular Mr. Martin claims that, because there has been no showing
that
> his transmissions were capable of causing harmful interference to
interstate
> communications, he cannot be prohibited from making those transmissions
without
> a license.
>
> (e) The prohibition of transmissions by Mr. Martin on frequencies for
which he
> is not authorized and the imposition of a monetary forfeiture against Mr.
> Martin for making such transmissions violate the First Amendment to the
United
> States Constitution.
>
> (f) The imposition of a forfeiture against Mr. Martin without an
opportunity
> for a hearing or ``to remedy [Mr. Martin's] alleged violation Section 301
of
> the Communications Act'' violates the Due Process clause of the Fourteenth
> Amendment to the United States Constitution.
>
> (g) The Commission is violating the Due Process clause of the Fourteenth
> Amendment to the United States Constitution by ``selectively'' initiating
a
> forfeiture proceeding against Mr. Martin and ``not targeting thousands of
other
> stations'' which operate without authorization.
>
>
> III. DISCUSSION
> 13. We reject the arguments made in Mr. Martin's petition for
reconsideration:
>
> (a) The agent who requested permission to inspect Mr. Martin's radio
> installation on March 15 and October 26, 1999, followed proper procedures.
On
> both occasions the agent informed Mr. Martin that Section 303(n) of the
Act
> authorizes the Commission to inspect radio installations and that the
agent had
> traced transmissions on frequencies for which Mr. Martin was not
authorized to

> Mr. Martin's residence. Immediate, on-the-spot inspections are necessary
in
> such circumstances because ``Any delay . . . can result in changed
conditions
> of the transmitting equipment or its operation, adversely affecting the
> efficiency of inspections." Ralph Yago, 35 FCC 113, 125 (Rev.Bd. 1963).
> Further, nothing in the Communications Act requires the Commission to
allow a
> subject of an inspection to have opportunity to have an attorney present
during
> a civil investigation proceeding.
>
> (b) The Bureau's conclusion that Mr. Martin operated radio transmitting
> apparatus without authorization on February 27, October 19, and October
26,
> 1999, is supported by substantial evidence. On each occasion, the agent
> determined electronically that transmissions on a frequency or frequencies
for
> which Mr. Martin was not authorized emanated from an antenna installed at
Mr.
> Martin's residence. The only person observed at Mr. Martin's residence on
any
> of these occasions was Mr. Martin. Mr. Martin has had ample opportunity to
> provide information, if it exists, which shows that another person
operated the
> station located at his residence; but he has not done so. During the
> transmissions observed on February 27, 1999, the operator of the station
> located at Mr. Martin's residence responded to the name ``Leonard."
>
> (c) As the NAL explicitly states, the forfeiture amount in this case was
> assessed in accordance with Section 503(b) of the Act,4 Section 1.80 of
the
> Rules,5 and The Commission's Forfeiture Policy Statement and Amendment of
> Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC
Rcd
> 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement").
> Section 503(b) of the Act requires that, in examining Mr. Martin's
response,
> the Commission take into account the nature, circumstances, extent and
gravity
> of the violation and, with respect to the violator, the degree of
culpability,
> any history of prior offenses, ability to pay, and other such matters as
> justice may require.6 In the Forfeiture Order, we considered all factors
> applicable to this matter and reduced the monetary forfeiture from $17,000
to
> $4,000 on the basis of Mr. Martin's inability to pay a larger amount. Mr.
> Martin has not furnished any information which justifies a further
reduction.

>
> (d) Mr. Martin's Commerce Clause argument is dependent on the incorrect
> assumption that transmissions emanating from his residence on 27.445,
27.535
> and 27.545 MHz are not capable of interfering with interstate
communications.
> In fact, transmissions on those frequencies are capable of long range
> (interstate) propagation through the natural phenomenon known as sky
(``skip'')
> wave. Furthermore, the view that the Commission cannot constitutionally
> regulate communications unless they are capable of interfering with
interstate
> communications is erroneous. See National Broadcasting Co. v. United
States,
> 319 U.S. 190, 209-217 (1943); FCC v. League of Women Voters of California,
468
> U.S. 364, 377 (1984); and Stephen Paul Dunifer, 11 FCC Rcd 718, 727
(1995).
>
> (e) The prohibition against unlicensed operation does not abridge Mr.
Martin's
> First Amendment rights. The United States Supreme Court has held
repeatedly
> that there is no constitutional right to use radio facilities without a
> license. See Red Lion Broadcasting Co. v. FCC, 395 U.S. 367, 388 (1969);
and
> National Broadcasting Co. v. United States, 319 U.S. 190, 227 (1943).
>
> (f) . The Commission did not abridge Mr. Martin's right to procedural Due
> Process by failing to provide opportunities for an evidentiary hearing and
for
> correction of the violations prior to the imposition of the forfeiture.
> Sections 503 and 504 of the Communications Act7 provide safeguards which
> satisfy Due Process requirements.8 See Stephen Paul Dunifer, 11 FCC Rcd
718,
> 729 (1995). Further, nothing in the Communications Act requires the
Commission
> to provide an unlicensed operator the opportunity for an evidentiary
hearing or
> an opportunity to correct a violation prior to imposition of a forfeiture.
>
> (g) The Commission did not abridge Mr. Martin's right to procedural Due
Process
> by proceeding against him ``selectively.'' The case against Mr. Martin
arose
> from the routine investigation of a complaint. As the Commission stated in
> KMAP, Inc., 46 FCC 2d 978 (1974): ``While our limited resources may result
in
> some violators going unpunished, that does not mean that we cannot impose

> sanctions against those violators we do find."9
>
> 14. We have examined Mr. Martin's petition for reconsideration pursuant to
the
> statutory factors set forth above, and in conjunction with the Policy
Statement
> as well. As a result of our reconsideration, we conclude that Mr. Martin
has
> failed to provide a sufficient justification for rescission or further
> reduction of the forfeiture.
>
> IV. ORDERING CLAUSES
> 15. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 1.106 of the
Rules,
> Mr. Martin's petition for reconsideration IS DENIED and the Forfeiture
Order,
> 15 FCC Rcd 12699 (Enf. Bur. 2000), released on July 12, 2000, IS AFFIRMED.
>
> 16. Payment of the forfeiture of $4,000 shall be made in the manner
provided
> for in Section 1.80 of the Rules within 30 days of the release of this
Order.
> If the forfeiture is not paid within the period specified, the case may be
> referred to the Department of Justice for collection pursuant to Section
504(a)
> of the Act.10 Payment may be made by mailing a check or similar
instrument,
> payable to the order of the ``Federal Communications Commission,'' to the
> Federal Communications Commission, P.O. Box 73482, Chicago, Illinois
> 60673-7482. The payment should note ``NAL/Acct. No. X3254-003'' referenced
> above. Requests for full payment under an installment plan should be sent
to:
> Chief, Credit and Debt Management Center, 445 12th Street, S.W.,
Washington,
> D.C. 20554.11
>
> 17. IT IS FURTHER ORDERED that a copy of this Order shall be sent by
Certified
> Mail -- Return Receipt Requested, to Mr. Leonard D. Martin at 4415
Spellman,
> Houston, Texas 77035.

> FORFEITURE ORDER

>
>
> Adopted: December 28, 2000 Released: December 29, 2000
>
>
> By the Chief, Enforcement Bureau:
>
>
>
> 1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in
the
> amount of seven thousand dollars ($7,000) against Stephen Fowler d/b/a
Exports
> R Us, for willfully violating Sections 2.803 and 2.815 of the Commission's
> Rules (``Rules'')1 by marketing an unauthorized external frequency power
> amplifier.
>
> 2. On September 28, 2000, the Commission's New Orleans, Louisiana Field
Office
> issued a Notice of Apparent Liability for Forfeiture in the amount of
seven
> thousand dollars ($7,000) to Stephen Fowler d/b/a Exports R Us. Stephen
Fowler
> d/b/a Exports R Us has not filed a response. Based on the information
before
> us, we affirm the forfeiture.
>
> 3. Accordingly, IT IS ORDERED THAT, pursuant to Section 503(b) of the
Act,2 and
> Sections 0.111, 0.311 and 1.80 of the Rules,3 Stephen Fowler d/b/a Exports
R
> Us, IS LIABLE FOR A MONETARY FORFEITURE in the amount $7,000, for willful
> violations of Sections 2.803 and 2.815 of the Rules.
>
> 4. Payment of the forfeiture shall be made in the manner provided for in
> Section 1.80 of the Rules within 30 days of the release of this Order. If
the
> forfeiture is not paid within the period specified, the case may be
referred to
> the Department of Justice for collection pursuant to section 504(a) of the
> Act.4 Payment may be made by mailing a check or similar instrument,
payable to
> the order of the Federal Communications Commission, to the Federal
> Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482.
The
> payment should note the NAL/Acct. number X3262010. Requests for full
payment
> under an installment plan should be sent to: Chief, Credit and Debt
Management

> Center, 445 12th Street, S.W., Washington, D.C. 20554.
>
> 5. IT IS FURTHER ORDERED that a copy of this Forfeiture Order shall be sent by

> Amateur radio operator Robert L. Meyers N5WLY
> loses license and pays ($1000) fine
>
> ORDER
>
>
> Adopted: October 5, 2000 Released: October 10, 2000
>
> By the Chief, Enforcement Bureau:
>
> 1. In this Order, we adopt a Consent Decree terminating a forfeiture proceeding
> against Robert L. Meyers (``Meyers'') concerning operation of an Amateur Radio
> transmitter in violation of Section 333 of the Communications Act of 1934, as
> amended (the ``Act''), and Sections 97.101(d) and 97.119(a) of the Commission's
> Rules (the ``Rules'').1 Meyers agrees to submit his Amateur Radio license for
> cancellation and not re-apply for an Amateur license for a period of 5 years.
> Meyers further agrees to make a voluntary contribution to the U.S. Treasury of
> $1,000.
>
> 2. The Enforcement Bureau assessed an $8,000 forfeiture against Meyers for
> violation of Section 333 of the Act and Sections 97.101(d) and 97.119(a) of the
> Rules.2
>
> 3. The Enforcement Bureau staff and Meyers have negotiated the terms of a
> Consent Decree that would terminate this proceeding. A copy of the Consent
> Decree is attached hereto and incorporated by reference.
>
> 4. We have reviewed the terms of the Consent Decree and evaluated the facts
> before us. We believe that the public interest would be served by approving the
> Consent Decree and terminating this proceeding.

>
> 5. Accordingly, IT IS ORDERED, pursuant to Sections 4(i) and 4(j) of the
> Communications Act of 1934, as amended, 47 U.S.C ?? 154(i) and 154(j), and
the
> authority delegated in Sections 0.111 and 0.311 of the Commission's Rules,
47
> C.F.R. ?? 0.111 and 0.311, that the attached Consent Decree is hereby
ADOPTED.
>
> 6. IT IS FURTHER ORDERED that the voluntary contribution referenced in the
> Consent Decree shall be paid by a check or money order drawn to the order
of
> the ``Federal Communications Commission.'' Reference should be made on the
> check or money order to ``NAL Acct. No. X3254- 001.'' The remittance
should be
> sent to: Forfeiture Collection Section, Finance Branch, Federal
Communications
> Commission, P.O. Box 73482, Chicago, Illinois 60673-7482.
>
> 7. IT IS FURTHER ORDERED that the above captioned forfeiture proceeding IS
> TERMINATED.

> Notice of Apparent Liability in the amount of ($8000)
> issued against amateur radio operator Paul E. Holcombe K4TOF
>
> FORFEITURE ORDER
>
>
> Adopted: May 2, 2000 Released: May 3, 2000
>
> By the Chief, Enforcement Bureau:
>
>
> I. INTRODUCTION
> 1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in
the
> amount of eight thousand dollars ($8,000) against Paul E. Holcombe,
licensee of
> amateur radio station K4TOF, Houston, Texas, for willful violation of
Section
> 333 Communications Act of 1934, as amended (``the Act''),1 and Sections
> 97.101(d) and 97.119 of the Commission's Rules.2 The noted violations
involve
> the operation of an amateur radio station so as to willfully or
maliciously
> cause interference to radio communications and the transmission of
unidentified
> amateur radio communications.

>
> 2. On January 13, 2000, the Commission's Resident Agent Office in Houston,
> Texas, issued a Notice of Apparent thousand dollars ($8,000) to Mr.
Holcombe.3
> Mr. Holcombe filed a response on February 4, 2000.
>
>
> II. BACKGROUND
> 3. Between 1993 and 1999, the Commission's Houston Resident Agent Office
> received numerous complaints alleging intentional interference to users on
the
> Memorial Emergency Repeater Association's 145.470/144.870 MHz amateur
radio
> repeater in Houston (``MERA repeater''). The interference was allegedly
caused
> by stations transmitting unidentified tones, inflammatory or derogatory
> remarks, and unmodulated signals, none of which were identified with an
> FCC-assigned call sign.
>
> 4. On May 25, 1999, an FCC agent from the Houston Office, using a mobile
> automatic direction finding (``MADF'') vehicle to monitor the MERA
repeater,
> observed a radio signal consisting of unidentified tones and remarks being
> transmitted on the input frequency of the MERA repeater. The agent
> simultaneously monitored the output frequency of the MERA repeater and
observed
> that this signal would transmit immediately after other stations began
> transmitting, resulting in interference to communications already in
progress
> on the MERA repeater. At about 8:08 p.m., using the MADF equipment and
> direction-finding techniques, the agent determined that the source of the
> unidentified interfering transmissions was a silver Toyota bearing Texas
> license plate DVZ74F. This vehicle was registered to Paul E. Holcombe,
licensee
> of amateur radio station K4TOF. Immediately thereafter, the Commission
agent
> conducted an interview with Mr. Holcombe and inspected the vehicle. Inside
the
> vehicle, the agent found an amateur radio transceiver which was tuned to
the
> MERA repeater frequency pair and was capable of transmitting on the MERA
> repeater frequency pair. Although Mr. Holcombe admitted that he owned the
> vehicle and the amateur radio transceiver and that he was the licensee of
> amateur radio station K4TOF, he denied intentionally making any radio
> transmissions that day.
>
> 5. On June 2, 1999, the Houston Office issued to Mr. Holcombe an Official
> Notice of Violation (``NOV'') for willful and malicious interference to
radio

> communications in violation of Section 333 of the Act and Section
97.101(c)4 of
> the Rules and for transmitting unidentified amateur radio communications
in
> violation of Section 97.119 of the Rules. In his June 4, 1999, response to
the
> NOV, Mr. Holcombe stated that his amateur radio station may have been
> inadvertently activated on May 25, 1999, but he denied any intent to
interfere
> with other stations. Mr. Holcombe also stated that he suffered from a
nerve
> disorder in his hands which makes it difficult for him to manipulate the
> controls of the amateur radio transceiver in his vehicle.
>
> 6. On January 13, 2000, the Houston Office issued the subject NAL, citing
Mr.
> Holcombe for willful violations of Section 333 of the Act and Sections
> 97.101(d) and 97.119 of the Rules. In his February 4, 2000, response to
the
> NAL, Mr. Holcombe denies that the violations occurred. Mr. Holcombe
asserts
> that there was a passenger in his car on May 25, 1999, Dennis Rogers, who
is
> willing to testify that the alleged violations did not occur. Mr. Holcombe
> states that Mr. Rogers told the FCC agent at the time that the alleged
> violations did not take place, but the agent discounted his statement. In
> addition, Mr. Holcombe asserts that the NAL unfairly holds him responsible
for
> violations dating back to 1993. Mr. Holcombe maintains that he is being
charged
> for any and all violations occurring during the period from 1993 to 1999
as a
> ``convenient target.'' Finally, Mr. Holcombe argues that he has been
denied a
> fair hearing of the facts and the right to due process.
>
>
> III. DISCUSSION
> 7. As the NAL explicitly states, the forfeiture amount in this case was
> assessed in accordance with Section 503 of the Act,5 Section 1.80 of the
Rules,
> 6 and The Commission's Forfeiture Policy Statement and Amendment of
Section
> 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd
17087
> (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement''). In
> examining Mr. Holcombe's response, Section 503(b) of the Act requires that
the
> Commission take into account the nature, circumstances, extent and gravity

of
> the violation and, with respect to the violator, the degree of
culpability, any
> history of prior offenses, ability to pay, and other such matters as
justice
> may require. 7
>
> 8. Section 333 of the Act and Section 97.101(d) of the Rules both prohibit
> willful or malicious interference to radio communications. Section 97.119
of
> the Rules prohibits the transmission of unidentified amateur radio
> communications. While Mr. Holcombe generally denies that any violations of
> these provisions occurred, his denial is contradicted by the observations
of
> the FCC agent. On May 25, 1999, using MADF equipment, the investigating
FCC
> agent observed a radio signal consisting of unidentified tones and remarks
> which would transmit on the MERA repeater input frequency immediately
after
> another station began transmitting, resulting in harmful interference to
> communications already in progress on the MERA repeater. The agent
positively
> identified the source of the interfering transmissions to be Mr.
Holcombe's

James I think the morse code is ah gettin to ya.

Probably need to shoot more skip, go to less PTA and tree hugger
meetings, and chase honey's around.

Jay in the Mojave

Joe,

All I can think to suggest is, if you paid with a credit card, call
the credit card company and dispute the charge, since you've not
received the goods.

Re: selling illegal radios ..... in all my travels, the

> > April 7, 2000 Forfeiture Order Against "Two Way Shop" in the amount of
> ($7000)
> > for Offering Linear Amplifiers for Sale
> >
> >
> > FCC INVESTIGATION LEADS TO ARREST
> > OF UNLICENSED AMATEUR RADIO OPERATOR
> >
> > The Federal Communications Commission today announced that an
> investigation by
> > its Enforcement Bureau led to the July 20, 2000, arrest of Mr. William
> Flippo,
> > Jupiter, Florida, for operating an unlicensed radio station on amateur
> radio
> > frequencies and for intentionally causing interference to licensed
amateur
> > radio stations.
> >
> > The Enforcement Bureau, responding to numerous complaints, had
previously
> > warned Mr. Flippo to stop his illegal activities and had issued him a
> $20,000
> > forfeiture. Despite the Enforcement Bureau's administrative response,
Mr.
> > Flippo did not stop his illegal activity.
> >
> > The United States Attorney's Office for the Southern District of Florida
> > charged Mr. Flippo with four counts of unlicensed radio operation (47
> U.S.C. &#65533;
> > 301) and four counts of interfering with licensed radio stations (47

> U.S.C. &#65533;
> > 333), which he allegedly committed between June 8, 1999, and April 11,
> 2000.
> > The United States Marshals Service arrested Mr. Flippo at his Jupiter,
> Florida
> > home, from which it also seized his radio transmitting equipment.
> >
> > If convicted, Mr. Flippo could face up to one year in prison and a fine
of
> up
> > to $10,000 for each violation.
> >
> > Commenting on behalf of the Enforcement Bureau, Jane E. Mago, Deputy
> Chief,
> > commended the members of the amateur radio community, who provided
> information
> > leading to Mr. Flippo's arrest, and thanked the United States Attorney's
> Office
> > for the Southern District of Florida and the United States Marshals
> Service for
> > their efforts in prosecuting the case.
> >
> >
> > TOP
> > FCC INVESTIGATION LEADS TO FINE
> > FOR LICENSED AMATEUR RADIO OPERATOR
> >
> > I. INTRODUCTION
> > 1. In this Memorandum Opinion and Order (``Order''), we deny Leonard
> Martin's
> > petition for reconsideration and affirm the Forfeiture Order1 issued
> against
> > Leonard D. Martin in the amount of four thousand dollars ($4,000) for
> willfully
> > and repeatedly violating Sections 301 and 303(n) of the Communications
Act
> of
> > 1934, as amended (``the Act''). 2 The noted violations involve Mr.
> Martin's
> > operation of a two-way radio station without Commission authorization
and
> his
> > refusal to allow inspections of his radio installation.
> >
> > 2. On March 3, 2000, the Houston Resident Agent Office (``Houston
> Office'')
> > issued a Notice of Apparent Liability for Forfeiture (``NAL'') in the
> amount of
> > seventeen thousand dollars ($17,000) to Mr. Martin for the referenced

> > violations.3 Mr. Martin filed a response to the NAL. On July 12, 2000,
the
> > Enforcement Bureau (``Bureau'') released a Forfeiture Order reducing the
> > proposed forfeiture to $4,000.
> >
> > II. BACKGROUND
> > 3. Mr. Martin is the former licensee of amateur station KC5WHN. By
letter
> of
> > November 3, 1998, the Commission notified Mr. Martin of complaints
> concerning a
> > station identifying as KC5WHN. The complaints asserted that the station
> > identifying as KC5WHN was operating on frequencies which were not
> authorized
> > for that station. In his telephone response to that letter, Mr. Martin
> denied
> > the alleged unauthorized operation.
> >
> > 4. On February 27, 1999, an agent from the Houston Office (``the
agent''),
> > using a mobile automatic direction finding (``MADF'') vehicle, observed
> voice
> > radio transmissions on frequencies 27.535 and 27.545 MHz. Frequency
27.535
> MHz
> > is allocated exclusively to Industrial radio stations. Frequency 27.545
> MHz is
> > allocated exclusively to United States Government radio stations. The
> > transmissions were unidentified, but the operator responded to the name
> > ``Leonard.'' Using the MADF vehicle, the agent determined that the
source
> of
> > the transmissions was an antenna mounted on the residence at 4415
> Spellman,
> > Houston, Texas, which was then the address of record for Mr. Martin's
> amateur
> > service station. There was no record of a Commission authorization
> permitting
> > Mr. Martin to operate on 27.535 MHz or 27.545 MHz.
> >
> > 5. On March 15, 1999, the agent, using an MADF vehicle, observed voice
> radio
> > transmissions on 27.370 MHz, a frequency allocated as a ``guard''
> frequency
> > between authorized channels in the Citizens Band Radio Service. The
> operator
> > identified himself as ``Leonard.'' Using the MADF vehicle, the agent
> determined
> > that the source of the transmissions was a vertical antenna mounted on

the
> > residence at 4415 Spellman, Houston, Texas. Immediately after his
> monitoring
> > observations, the agent knocked on the door of the residence. Mr. Martin
> > answered the door and refused the agent's request to inspect the radio
> station
> > located in the residence. The agent informed Mr. Martin that his
> previously
> > observed operation on 27.535 and 27.545 MHz was unlicensed and in
> violation of
> > Section 301 of the Act because Mr. Martin held no Commission
authorization
> to
> > operate on those frequencies. The agent also informed Mr. Martin that
his
> > refusal to allow an inspection constituted violation of Section 303(n)
of
> the
> > Act.
> >
> > 6. On April 2, 1999, the Houston Office issued Mr. Martin an Official
> Notice of
> > Violation (``NOV'') for violations of Sections 301 and 303(n) of the
Act.
> In
> > Mr. Martin's April 7, 1999, response to the NOV, he stated: ``I now
fully
> > understand that operation on the frequencies outlined is a violation ...
> that
> > the FCC has the authority to inspect all radio installations... [and]
...
> I
> > promise no further action by the Commission will be necessary to insure
my
> > complete compliance with the FCC Rules....''
> >
> > 7. On July 22, 1999, Mr. Martin submitted his amateur service license
for
> > KC5WHN to the Commission for cancellation. By letter of July 23, 1999,
the
> > Commission acknowledged receipt of the license, and confirmed that it
was
> > cancelled effective July 23, 1999. The letter also warned Mr. Martin
that
> any
> > unlicensed radio operation would constitute violation of Section 301 of
> the
> > Act.
> >

> > 8. On October 19, 1999, the agent investigated an interference complaint
> > against Mr. Martin. The agent, using an MADF vehicle, observed voice
radio
> > transmissions on frequency 27.535 MHz, and determined that the source of
> those
> > transmissions was a vertical antenna mounted on Mr. Martin's residence,
at
> 4415
> > Spellman, Houston, Texas. This frequency is allocated exclusively to
licen
> sed
> > Industrial radio stations. There was no record of a Commission
> authorization
> > permitting Mr. Martin to operate on 27.535 MHz.
> >
> > 9. On October 26, 1999, the agent, using an MADF vehicle, observed voice
> radio
> > transmissions on 27.455 MHz, a frequency allocated exclusively to
> Industrial
> > radio stations. Using the MADF vehicle, the agent determined that the
> source of
> > those transmissions was a vertical antenna mounted on Mr. Martin's
> residence,
> > at 4415 Spellman, Houston, Texas. There was no record of a Commission
> > authorization permitting Mr. Martin to operate on 27.455 MHz.
Immediately
> after
> > the monitoring, the agent knocked on the door of the residence and
> requested
> > permission to inspect the station located there. Mr. Martin, who
answered
> the
> > door, refused to allow an inspection.
> >
> > 10. On March 3, 2000, the Houston Office issued a NAL in the amount of
> $17,000
> > to Mr. Martin for violations of Sections 301 and 303(n) of the Act. In
his
> > response to the NAL, Mr. Martin requested cancellation of the proposed
> > forfeiture but did not deny violating Sections 301 and 303(n).
> >
> > 11. In its Forfeiture Order, released July 12, 2000, the Bureau
concluded
> that
> > Mr. Martin willfully and repeatedly violated Section 301 of the Act by
> > operating radio transmitting apparatus without authorization on February
> 27,
> > October 19, and October 26, 1999; and that he willfully and repeatedly
> violated

> > Section 303(n) of the Act by refusing to make his radio installation
> available
> > for inspection on March 15 and October 26, 1999. The Forfeiture Order
> assessed
> > a monetary forfeiture of $4,000 for those violations. The sole basis for
> > reducing the $17,000 forfeiture amount proposed by the NAL to $4,000 was
> Mr.
> > Martin's inability to pay more than $4,000.
> >
> > 12. In his petition for reconsideration of the Forfeiture Order, Mr.
> Martin
> > still does not deny operating radio transmitting apparatus without
> > authorization or refusing to make his radio installation available for
> > inspection. However, he propounds the following arguments for reduction
or
> > rescission of the forfeiture:
> >
> > (a) The Commission ``failed to comply with its own procedures.''
> Specifically,
> > Mr. Martin asserts that, when an FCC agent requested permission to
inspect
> his
> > radio installation, the agent ``did not provide [Mr. Martin] proper
notice
> to
> > inspect [Mr. Martin's] communications devices or of any pending
> investigation,
> > or allow [Mr. Martin] an opportunity to have an attorney present'' and
did
> not
> > allow sufficient time for Mr. Martin ``to exercise [his] rights as a
U.S.
> > Citizen to review any FCC rule or federal law that would permit
> unwarranted
> > entry into [his] residence by the FCC.''
> >
> > (b) The Forfeiture Order ``is based upon unsubstantiated allegations
with
> > insufficient evidentiary support.'' In particular, Mr. Martin contends
> that
> > another station near his residence ``could have been'' the source of the
> > transmissions observed by the FCC agent and that there is insufficient
> proof
> > that Mr. Martin was the operator the station observed by the FCC agent.
> >
> > (c) The forfeiture amount is ``grossly disproportionate to the alleged
> > violations.'' Specifically, Mr. Martin asserts that the forfeiture
amount
> of

> > $4,000 is unreasonable ``given the nature and extent of the alleged
> > violations.'' Mr. Martin also contends that the Bureau did not consider
> all the
> > required mitigating factors. According to Mr. Martin, these include: the
> number
> > of occurrences; the corrective measures Mr. Martin agreed to take; Mr.
> Martin's
> > ability to pay; and ``the fact that no licensed radio station complained
> of
> > interference nor was there any proof of actual harm caused by any radio
> > transmission from [Mr. Martin's] residence.''
> >
> > (d) The Commission, by imposing a forfeiture against Mr. Martin, has
> exceeded
> > its authority to regulate interstate communications under the Commerce
> Clause
> > of the Constitution. Mr. Martin argues that, although Section radio
> > communications within one state as well as between states, the statute
> must be
> > interpreted and applied in a manner consistent with constitutional
> limitations.
> > In particular Mr. Martin claims that, because there has been no showing
> that
> > his transmissions were capable of causing harmful interference to
> interstate
> > communications, he cannot be prohibited from making those transmissions
> without
> > a license.
> >
> > (e) The prohibition of transmissions by Mr. Martin on frequencies for
> which he
> > is not authorized and the imposition of a monetary forfeiture against
Mr.
> > Martin for making such transmissions violate the First Amendment to the
> United
> > States Constitution.
> >

> opportunity
> > for a hearing or ``to remedy [Mr. Martin's] alleged violation Section
301
> of
> > the Communications Act'' violates the Due Process clause of the
Fourteenth
> > Amendment to the United States Constitution.
> >
> > (g) The Commission is violating the Due Process clause of the Fourteenth
> > Amendment to the United States Constitution by ``selectively''
initiating

> a
> > forfeiture proceeding against Mr. Martin and ``not targeting thousands
of
> other
> > stations'' which operate without authorization.
> >
> >
> > III. DISCUSSION
> > 13. We reject the arguments made in Mr. Martin's petition for
> reconsideration:
> >
> > (a) The agent who requested permission to inspect Mr. Martin's radio
> > installation on March 15 and October 26, 1999, followed proper
procedures.
> On
> > both occasions the agent informed Mr. Martin that Section 303(n) of the
> Act
> > authorizes the Commission to inspect radio installations and that the
> agent had
> > traced transmissions on frequencies for which Mr. Martin was not
> authorized to
> > Mr. Martin's residence. Immediate, on-the-spot inspections are necessary
> in
> > such circumstances because ``Any delay . . . can result in changed
> conditions
> > of the transmitting equipment or its operation, adversely affecting the
> > efficiency of inspections.'' Ralph Yago, 35 FCC 113, 125 (Rev.Bd. 1963).
> > Further, nothing in the Communications Act requires the Commission to
> allow a
> > subject of an inspection to have opportunity to have an attorney present
> during
> > a civil investigation proceeding.
> >
> > (b) The Bureau's conclusion that Mr. Martin operated radio transmitting
> > apparatus without authorization on February 27, October 19, and October
> 26,
> > 1999, is supported by substantial evidence. On each occasion, the agent
> > determined electronically that transmissions on a frequency or
frequencies
> for
> > which Mr. Martin was not authorized emanated from an antenna installed
at
> Mr.
> > Martin's residence. The only person observed at Mr. Martin's residence
on
> any
> > of these occasions was Mr. Martin. Mr. Martin has had ample opportunity
to
> > provide information, if it exists, which shows that another person

> operated the
> > station located at his residence; but he has not done so. During the
> > transmissions observed on February 27, 1999, the operator of the station
> > located at Mr. Martin's residence responded to the name ``Leonard.''
> >
> > (c) As the NAL explicitly states, the forfeiture amount in this case was
> > assessed in accordance with Section 503(b) of the Act,4 Section 1.80 of
> the
> > Rules,5 and The Commission's Forfeiture Policy Statement and Amendment
of
> > Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12
FCC
> Rcd
> > 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy
Statement'').
> > Section 503(b) of the Act requires that, in examining Mr. Martin's
> response,
> > the Commission take into account the nature, circumstances, extent and
> gravity
> > of the violation and, with respect to the violator, the degree of
> culpability,
> > any history of prior offenses, ability to pay, and other such matters as
> > justice may require.6 In the Forfeiture Order, we considered all factors
> > applicable to this matter and reduced the monetary forfeiture from
$17,000
> to
> > $4,000 on the basis of Mr. Martin's inability to pay a larger amount.
Mr.
> > Martin has not furnished any information which justifies a further
> reduction.
> >
> > (d) Mr. Martin's Commerce Clause argument is dependent on the incorrect
> > assumption that transmissions emanating from his residence on 27.445,
> 27.535
> > and 27.545 MHz are not capable of interfering with interstate
> communications.
> > In fact, transmissions on those frequencies are capable of long range
> > (interstate) propagation through the natural phenomenon known as sky
> (``skip'')
> > wave. Furthermore, the view that the Commission cannot constitutionally
> > regulate communications unless they are capable of interfering with
> interstate
> > communications is erroneous. See National Broadcasting Co. v. United
> States,
> > 319 U.S. 190, 209-217 (1943); FCC v. League of Women Voters of
California,
> 468
> > U.S. 364, 377 (1984); and Stephen Paul Dunifer, 11 FCC Rcd 718, 727
> (1995).

> >
> > (e) The prohibition against unlicensed operation does not abridge Mr.
> Martin's
> > First Amendment rights. The United States Supreme Court has held
> repeatedly
> > that there is no constitutional right to use radio facilities without a
> > license. See Red Lion Broadcasting Co. v. FCC, 395 U.S. 367, 388 (1969);
> and
> > National Broadcasting Co. v. United States, 319 U.S. 190, 227 (1943).
> >
> > (f) . The Commission did not abridge Mr. Martin's right to procedural
Due
> > Process by failing to provide opportunities for an evidentiary hearing
and
> for
> > correction of the violations prior to the imposition of the forfeiture.
> > Sections 503 and 504 of the Communications Act7 provide safeguards which
> > satisfy Due Process requirements.8 See Stephen Paul Dunifer, 11 FCC Rcd
> 718,
> > 729 (1995). Further, nothing in the Communications Act requires the
> Commission
> > to provide an unlicensed operator the opportunity for an evidentiary
> hearing or
> > an opportunity to correct a violation prior to imposition of a
forfeiture.
> >
> > (g) The Commission did not abridge Mr. Martin's right to procedural Due
> Process
> > by proceeding against him ``selectively.'' The case against Mr. Martin
> arose
> > from the routine investigation of a complaint. As the Commission stated
in
> > KMAP, Inc., 46 FCC 2d 978 (1974): ``While our limited resources may
result
> in
> > some violators going unpunished, that does not mean that we cannot
impose
> > sanctions against those violators we do find.''9
> >
> > 14. We have examined Mr. Martin's petition for reconsideration pursuant
to
> the
> > statutory factors set forth above, and in conjunction with the Policy
> Statement
> > as well. As a result of our reconsideration, we conclude that Mr. Martin
> has
> > failed to provide a sufficient justification for rescission or further
> > reduction of the forfeiture.
> >

> > IV. ORDERING CLAUSES
> > 15. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 1.106 of the
> Rules,
> > Mr. Martin's petition for reconsideration IS DENIED and the Forfeiture

> > By the Chief, Enforcement Bureau:
> >
> >
> > I. INTRODUCTION
> > 1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture
in

> the
> > amount of eight thousand dollars ($8,000) against Paul E. Holcombe,
> licensee of
> > amateur radio station K4TOF, Houston, Texas, for willful violation of
> Section
> > 333 Communications Act of 1934, as amended (``the Act''),1 and Sections
> > 97.101(d) and 97.119 of the Commission's Rules.2 The noted violations
> involve
> > the operation of an amateur radio station so as to willfully or
> maliciously
> > cause interference to radio communications and the transmission of
> unidentified
> > amateur radio communications.
> >
> > 2. On January 13, 2000, the Commission's Resident Agent Office in
Houston,
> > Texas, issued a Notice of Apparent thousand dollars ($8,000) to Mr.
> Holcombe.3
> > Mr. Holcombe filed a response on February 4, 2000.
> >
> >
> > II. BACKGROUND
> > 3. Between 1993 and 1999, the Commission's Houston Resident Agent Office
> > received numerous complaints alleging intentional interference to users
on
> the
> > Memorial Emergency Repeater Association's 145.470/144.870 MHz amateur
> radio
> > repeater in Houston (``MERA repeater''). The interference was allegedly
> caused
> > by stations transmitting unidentified tones, inflammatory or derogatory
> > remarks, and unmodulated signals, none of which were identified with an
> > FCC-assigned call sign.
> >
> > 4. On May 25, 1999, an FCC agent from the Houston Office, using a mobile
> > automatic direction finding (``MADF'') vehicle to monitor the MERA
> repeater,
> > observed a radio signal consisting of unidentified tones and remarks
being
> > transmitted on the input frequency of the MERA repeater. The agent
> > simultaneously monitored the output frequency of the MERA repeater and
> observed
> > that this signal would transmit immediately after other stations began
> > transmitting, resulting in interference to communications already in
> progress
> > on the MERA repeater. At about 8:08 p.m., using the MADF equipment and
> > direction-finding techniques, the agent determined that the source of
the
> > unidentified interfering transmissions was a silver Toyota bearing Texas

> > license plate DVZ74F. This vehicle was registered to Paul E. Holcombe,
> licensee
> > of amateur radio station K4TOF. Immediately thereafter, the Commission
> agent
> > conducted an interview with Mr. Holcombe and inspected the vehicle.
Inside
> the
> > vehicle, the agent found an amateur radio transceiver which was tuned to
> the
> > MERA repeater frequency pair and was capable of transmitting on the MERA
> > repeater frequency pair. Although Mr. Holcombe admitted that he owned
the
> > vehicle and the amateur radio transceiver and that he was the licensee
of
> > amateur radio station K4TOF, he denied intentionally making any radio
> > transmissions that day.
> >
> > 5. On June 2, 1999, the Houston Office issued to Mr. Holcombe an
Official
> > Notice of Violation (``NOV'') for willful and malicious interference to
> radio
> > communications in violation of Section 333 of the Act and Section
> 97.101(c)4 of
> > the Rules and for transmitting unidentified amateur radio communications
> in
> > violation of Section 97.119 of the Rules. In his June 4, 1999, response
to
> the
> > NOV, Mr. Holcombe stated that his amateur radio station may have been
> > inadvertently activated on May 25, 1999, but he denied any intent to
> interfere
> > with other stations. Mr. Holcombe also stated that he suffered from a
> nerve
> > disorder in his hands which makes it difficult for him to manipulate the
> > controls of the amateur radio transceiver in his vehicle.
> >
> > 6. On January 13, 2000, the Houston Office issued the subject NAL,
citing
> Mr.
> > Holcombe for willful violations of Section 333 of the Act and Sections
> > 97.101(d) and 97.119 of the Rules. In his February 4, 2000, response to
> the
> > NAL, Mr. Holcombe denies that the violations occurred. Mr. Holcombe
> asserts
> > that there was a passenger in his car on May 25, 1999, Dennis Rogers,
who
> is
> > willing to testify that the alleged violations did not occur. Mr.
Holcombe

> > states that Mr. Rogers told the FCC agent at the time that the alleged
> > violations did not take place, but the agent discounted his statement.
In
> > addition, Mr. Holcombe asserts that the NAL unfairly holds him
responsible
> for
> > violations dating back to 1993. Mr. Holcombe maintains that he is being
> charged
> > for any and all violations occurring during the period from 1993 to 1999
> as a
> > ``convenient target.'' Finally, Mr. Holcombe argues that he has been
> denied a
> > fair hearing of the facts and the right to due process.
> >
> >
> > III. DISCUSSION
> > 7. As the NAL explicitly states, the forfeiture amount in this case was
> > assessed in accordance with Section 503 of the Act,5 Section 1.80 of the
> Rules,
> > 6 and The Commission's Forfeiture Policy Statement and Amendment of
> Section
> > 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd
> 17087
> > (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement''). In
> > examining Mr. Holcombe's response, Section 503(b) of the Act requires
that
> the
> > Commission take into account the nature, circumstances, extent and
gravity
> of
> > the violation and, with respect to the violator, the degree of
> culpability, any
> > history of prior offenses, ability to pay, and other such matters as
> justice
> > may require. 7
> >
> > 8. Section 333 of the Act and Section 97.101(d) of the Rules both
prohibit
> > willful or malicious interference to radio communications. Section
97.119
> of
> > the Rules prohibits the transmission of unidentified amateur radio
> > communications. While Mr. Holcombe generally denies that any violations
of
> > these provisions occurred, his denial is contradicted by the
observations
> of
> > the FCC agent. On May 25, 1999, using MADF equipment, the investigating
> FCC

> > agent observed a radio signal consisting of unidentified tones and
remarks
> > which would transmit on the MERA repeater input frequency immediately
> after
> > another station began transmitting, resulting in harmful interference to
> > communications already in progress on the MERA repeater. The agent
> positively
> > identified the source of the interfering transmissions to be Mr.
> Holcombe's
> > vehicle. On inspection of Mr. Holcombe's vehicle, the agent found an
> amateur
> > radio transceiver which was capable of transmitting on the MERA repeater
> > frequency pair and was in fact tuned to the MERA repeater frequency
pair.
> We
> > conclude that this evidence is sufficient to establish that Mr. Holcombe
> > willfully and maliciously interfered with radio communications in
willful
> > violation of Section 333 of the Act and Section 97.101(d) of the Rules.
As
> > stated in the NAL, the interference was both willful and malicious
because
> Mr.
> > Holcombe timed his transmissions to commence just after other stations
had
> > begun transmitting. Mr. Holcombe also willfully violated Section 97.119
of
> the

> FCC INVESTIGATION LEADS TO ARREST
> OF UNLICENSED AMATEUR RADIO OPERATOR
>
> The Federal Communications Commission today announced that an
investigation by
> its Enforcement Bureau led to the July 20, 2000, arrest of Mr. William

Flippo,
> Jupiter, Florida, for operating an unlicensed radio station on amateur
radio
> frequencies and for intentionally causing interference to licensed amateur
> radio stations.
>
> The Enforcement Bureau, responding to numerous complaints, had previously
> warned Mr. Flippo to stop his illegal activities and had issued him a
$20,000
> forfeiture. Despite the Enforcement Bureau's administrative response, Mr.
> Flippo did not stop his illegal activity.
>
> The United States Attorney's Office for the Southern District of Florida
> charged Mr. Flippo with four counts of unlicensed radio operation (47
U.S.C. &#65533;
> 301) and four counts of interfering with licensed radio stations (47
U.S.C. &#65533;
> 333), which he allegedly committed between June 8, 1999, and April 11,
2000.
> The United States Marshals Service arrested Mr. Flippo at his Jupiter,
Florida
> home, from which it also seized his radio transmitting equipment.
>
> If convicted, Mr. Flippo could face up to one year in prison and a fine of
up
> to $10,000 for each violation.
>
> Commenting on behalf of the Enforcement Bureau, Jane E. Mago, Deputy
Chief,
> commended the members of the amateur radio community, who provided
information
> leading to Mr. Flippo's arrest, and thanked the United States Attorney's
Office
> for the Southern District of Florida and the United States Marshals
Service for
> their efforts in prosecuting the case.
>
>
> TOP
> FCC INVESTIGATION LEADS TO FINE
> FOR LICENSED AMATEUR RADIO OPERATOR
>
> I. INTRODUCTION
> 1. In this Memorandum Opinion and Order (``Order''), we deny Leonard
Martin's
> petition for reconsideration and affirm the Forfeiture Order1 issued
against
> Leonard D. Martin in the amount of four thousand dollars ($4,000) for
willfully

> and repeatedly violating Sections 301 and 303(n) of the Communications Act
of
> 1934, as amended (``the Act''). 2 The noted violations involve Mr.
Martin's
> operation of a two-way radio station without Commission authorization and
his
> refusal to allow inspections of his radio installation.
>
> 2. On March 3, 2000, the Houston Resident Agent Office (``Houston
Office'')
> issued a Notice of Apparent Liability for Forfeiture (``NAL'') in the
amount of
> seventeen thousand dollars ($17,000) to Mr. Martin for the referenced
> violations.3 Mr. Martin filed a response to the NAL. On July 12, 2000, the
> Enforcement Bureau (``Bureau'') released a Forfeiture Order reducing the
> proposed forfeiture to $4,000.
>
> II. BACKGROUND
> 3. Mr. Martin is the former licensee of amateur station KC5WHN. By letter
of
> November 3, 1998, the Commission notified Mr. Martin of complaints
concerning a
> station identifying as KC5WHN. The complaints asserted that the station
> identifying as KC5WHN was operating on frequencies which were not
authorized
> for that station. In his telephone response to that letter, Mr. Martin
denied
> the alleged unauthorized operation.
>
> 4. On February 27, 1999, an agent from the Houston Office (``the agent''),
> using a mobile automatic direction finding (``MADF'') vehicle, observed
voice
> radio transmissions on frequencies 27.535 and 27.545 MHz. Frequency 27.535
MHz
> is allocated exclusively to Industrial radio stations. Frequency 27.545
MHz is
> allocated exclusively to United States Government radio stations. The
> transmissions were unidentified, but the operator responded to the name
> ``Leonard.'' Using the MADF vehicle, the agent determined that the source
of
> the transmissions was an antenna mounted on the residence at 4415
Spellman,
> Houston, Texas, which was then the address of record for Mr. Martin's
amateur
> service station. There was no record of a Commission authorization
permitting
> Mr. Martin to operate on 27.535 MHz or 27.545 MHz.
>
> 5. On March 15, 1999, the agent, using an MADF vehicle, observed voice

radio
> transmissions on 27.370 MHz, a frequency allocated as a ``guard''
frequency
> between authorized channels in the Citizens Band Radio Service. The
operator
> identified himself as ``Leonard.'' Using the MADF vehicle, the agent
determined
> that the source of the transmissions was a vertical antenna mounted on the
> residence at 4415 Spellman, Houston, Texas. Immediately after his
monitoring
> observations, the agent knocked on the door of the residence. Mr. Martin
> answered the door and refused the agent's request to inspect the radio
station
> located in the residence. The agent informed Mr. Martin that his
previously
> observed operation on 27.535 and 27.545 MHz was unlicensed and in
violation of
> Section 301 of the Act because Mr. Martin held no Commission authorization
to
> operate on those frequencies. The agent also informed Mr. Martin that his
> refusal to allow an inspection constituted violation of Section 303(n) of
the
> Act.
>
> 6. On April 2, 1999, the Houston Office issued Mr. Martin an Official
Notice of
> Violation (``NOV'') for violations of Sections 301 and 303(n) of the Act.
In
> Mr. Martin's April 7, 1999, response to the NOV, he stated: ``I now fully
> understand that operation on the frequencies outlined is a violation ...
that
> the FCC has the authority to inspect all radio installations... [and] ...
I
> promise no further action by the Commission will be necessary to insure my
> complete compliance with the FCC Rules....''
>
> 7. On July 22, 1999, Mr. Martin submitted his amateur service license for
> KC5WHN to the Commission for cancellation. By letter of July 23, 1999, the
> Commission acknowledged receipt of the license, and confirmed that it was
> cancelled effective July 23, 1999. The letter also warned Mr. Martin that
any
> unlicensed radio operation would constitute violation of Section 301 of
the
> Act.
>
> 8. On October 19, 1999, the agent investigated an interference complaint
> against Mr. Martin. The agent, using an MADF vehicle, observed voice radio
> transmissions on frequency 27.535 MHz, and determined that the source of
those

> transmissions was a vertical antenna mounted on Mr. Martin's residence, at 4415
> Spellman, Houston, Texas. This frequency is allocated exclusively to licensed
> Industrial radio stations. There was no record of a Commission authorization
> permitting Mr. Martin to operate on 27.535 MHz.
>
> 9. On October 26, 1999, the agent, using an MADF vehicle, observed voice radio
> transmissions on 27.455 MHz, a frequency allocated exclusively to Industrial
> radio stations. Using the MADF vehicle, the agent determined that the source of
> those transmissions was a vertical antenna mounted on Mr. Martin's residence,
> at 4415 Spellman, Houston, Texas. There was no record of a Commission
> authorization permitting Mr. Martin to operate on 27.455 MHz. Immediately after
> the monitoring, the agent knocked on the door of the residence and requested
> permission to inspect the station located there. Mr. Martin, who answered the
> door, refused to allow an inspection.
>
> 10. On March 3, 2000, the Houston Office issued a NAL in the amount of $17,000
> to Mr. Martin for violations of Sections 301 and 303(n) of the Act. In his
> response to the NAL, Mr. Martin requested cancellation of the proposed
> forfeiture but did not deny violating Sections 301 and 303(n).
>
> 11. In its Forfeiture Order, released July 12, 2000, the Bureau concluded that
> Mr. Martin willfully and repeatedly violated Section 301 of the Act by
> operating radio transmitting apparatus without authorization on February 27,
> October 19, and October 26, 1999; and that he willfully and repeatedly violated
> Section 303(n) of the Act by refusing to make his radio installation available
> for inspection on March 15 and October 26, 1999. The Forfeiture Order assessed
> a monetary forfeiture of $4,000 for those violations. The sole basis for
> reducing the $17,000 forfeiture amount proposed by the NAL to $4,000 was Mr.
> Martin's inability to pay more than $4,000.
>
> 12. In his petition for reconsideration of the Forfeiture Order, Mr. Martin

> still does not deny operating radio transmitting apparatus without
> authorization or refusing to make his radio installation available for
> inspection. However, he propounds the following arguments for reduction or
> rescission of the forfeiture:
>
> (a) The Commission ``failed to comply with its own procedures.''
Specifically,
> Mr. Martin asserts that, when an FCC agent requested permission to inspect
his
> radio installation, the agent ``did not provide [Mr. Martin] proper notice
to
> inspect [Mr. Martin's] communications devices or of any pending
investigation,
> or allow [Mr. Martin] an opportunity to have an attorney present'' and did
not
> allow sufficient time for Mr. Martin ``to exercise [his] rights as a U.S.
> Citizen to review any FCC rule or federal law that would permit
unwarranted
> entry into [his] residence by the FCC.''
>
> (b) The Forfeiture Order ``is based upon unsubstantiated allegations with
> insufficient evidentiary support.'' In particular, Mr. Martin contends
that
> another station near his residence ``could have been'' the source of the
> transmissions observed by the FCC agent and that there is insufficient
proof
> that Mr. Martin was the operator the station observed by the FCC agent.
>
> (c) The forfeiture amount is ``grossly disproportionate to the alleged
> violations.'' Specifically, Mr. Martin asserts that the forfeiture amount
of
> $4,000 is unreasonable ``given the nature and extent of the alleged
> violations.'' Mr. Martin also contends that the Bureau did not consider
all the
> required mitigating factors. According to Mr. Martin, these include: the
number
> of occurrences; the corrective measures Mr. Martin agreed to take; Mr.
Martin's
> ability to pay; and ``the fact that no licensed radio station complained
of
> interference nor was there any proof of actual harm caused by any radio
> transmission from [Mr. Martin's] residence.''
>
> (d) The Commission, by imposing a forfeiture against Mr. Martin, has
exceeded
> its authority to regulate interstate communications under the Commerce
Clause
> of the Constitution. Mr. Martin argues that, although Section radio
> communications within one state as well as between states, the statute

must be
> interpreted and applied in a manner consistent with constitutional
limitations.
> In particular Mr. Martin claims that, because there has been no showing
that
> his transmissions were capable of causing harmful interference to
interstate
> communications, he cannot be prohibited from making those transmissions
without
> a license.
>
> (e) The prohibition of transmissions by Mr. Martin on frequencies for
which he
> is not authorized and the imposition of a monetary forfeiture against Mr.
> Martin for making such transmissions violate the First Amendment to the
United
> States Constitution.
>
> (f) The imposition of a forfeiture against Mr. Martin without an
opportunity
> for a hearing or ``to remedy [Mr. Martin's] alleged violation Section 301
of
> the Communications Act'' violates the Due Process clause of the Fourteenth
> Amendment to the United States Constitution.
>
> (g) The Commission is violating the Due Process clause of the Fourteenth
> Amendment to the United States Constitution by ``selectively'' initiating
a
> forfeiture proceeding against Mr. Martin and ``not targeting thousands of
other
> stations'' which operate without authorization.
>
>
> III. DISCUSSION
> 13. We reject the arguments made in Mr. Martin's petition for
reconsideration:
>
> (a) The agent who requested permission to inspect Mr. Martin's radio
> installation on March 15 and October 26, 1999, followed proper procedures.
On
> both occasions the agent informed Mr. Martin that Section 303(n) of the
Act
> authorizes the Commission to inspect radio installations and that the
agent had
> traced transmissions on frequencies for which Mr. Martin was not
authorized to
> Mr. Martin's residence. Immediate, on-the-spot inspections are necessary
in
> such circumstances because ``Any delay . . . can result in changed

conditions
> of the transmitting equipment or its operation, adversely affecting the
> efficiency of inspections." Ralph Yago, 35 FCC 113, 125 (Rev.Bd. 1963).
> Further, nothing in the Communications Act requires the Commission to
allow a
> subject of an inspection to have opportunity to have an attorney present
during
> a civil investigation proceeding.
>
> (b) The Bureau's conclusion that Mr. Martin operated radio transmitting
> apparatus without authorization on February 27, October 19, and October
26,
> 1999, is supported by substantial evidence. On each occasion, the agent
> determined electronically that transmissions on a frequency or frequencies
for
> which Mr. Martin was not authorized emanated from an antenna installed at
Mr.
> Martin's residence. The only person observed at Mr. Martin's residence on
any
> of these occasions was Mr. Martin. Mr. Martin has had ample opportunity to
> provide information, if it exists, which shows that another person
operated the
> station located at his residence; but he has not done so. During the
> transmissions observed on February 27, 1999, the operator of the station
> located at Mr. Martin's residence responded to the name ``Leonard.''
>
> (c) As the NAL explicitly states, the forfeiture amount in this case was
> assessed in accordance with Section 503(b) of the Act,4 Section 1.80 of
the
> Rules,5 and The Commission's Forfeiture Policy Statement and Amendment of
> Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC
Rcd
> 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement'').
> Section 503(b) of the Act requires that, in examining Mr. Martin's
response,
> the Commission take into account the nature, circumstances, extent and
gravity
> of the violation and, with respect to the violator, the degree of
culpability,
> any history of prior offenses, ability to pay, and other such matters as
> justice may require.6 In the Forfeiture Order, we considered all factors
> applicable to this matter and reduced the monetary forfeiture from $17,000
to
> $4,000 on the basis of Mr. Martin's inability to pay a larger amount. Mr.
> Martin has not furnished any information which justifies a further
reduction.
>
> (d) Mr. Martin's Commerce Clause argument is dependent on the incorrect
> assumption that transmissions emanating from his residence on 27.445,

27.535
> and 27.545 MHz are not capable of interfering with interstate
communications.
> In fact, transmissions on those frequencies are capable of long range
> (interstate) propagation through the natural phenomenon known as sky
(``skip'')
> wave. Furthermore, the view that the Commission cannot constitutionally
> regulate communications unless they are capable of interfering with
interstate
> communications is erroneous. See National Broadcasting Co. v. United
States,
> 319 U.S. 190, 209-217 (1943); FCC v. League of Women Voters of California,
468
> U.S. 364, 377 (1984); and Stephen Paul Dunifer, 11 FCC Rcd 718, 727
(1995).
>
> (e) The prohibition against unlicensed operation does not abridge Mr.
Martin's
> First Amendment rights. The United States Supreme Court has held
repeatedly
> that there is no constitutional right to use radio facilities without a
> license. See Red Lion Broadcasting Co. v. FCC, 395 U.S. 367, 388 (1969);
and
> National Broadcasting Co. v. United States, 319 U.S. 190, 227 (1943).
>
> (f) . The Commission did not abridge Mr. Martin's right to procedural Due
> Process by failing to provide opportunities for an evidentiary hearing and
for
> correction of the violations prior to the imposition of the forfeiture.
> Sections 503 and 504 of the Communications Act7 provide safeguards which
> satisfy Due Process requirements.8 See Stephen Paul Dunifer, 11 FCC Rcd
718,
> 729 (1995). Further, nothing in the Communications Act requires the
Commission
> to provide an unlicensed operator the opportunity for an evidentiary
hearing or
> an opportunity to correct a violation prior to imposition of a forfeiture.
>
> (g) The Commission did not abridge Mr. Martin's right to procedural Due
Process
> by proceeding against him ``selectively.'' The case against Mr. Martin
arose
> from the routine investigation of a complaint. As the Commission stated in
> KMAP, Inc., 46 FCC 2d 978 (1974): ``While our limited resources may result
in
> some violators going unpunished, that does not mean that we cannot impose
> sanctions against those violators we do find.''9
>
> 14. We have examined Mr. Martin's petition for reconsideration pursuant to

the
> statutory factors set forth above, and in conjunction with the Policy
Statement
> as well. As a result of our reconsideration, we conclude that Mr. Martin
has
> failed to provide a sufficient justification for rescission or further
> reduction of the forfeiture.
>
> IV. ORDERING CLAUSES
> 15. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 1.106 of the
Rules,
> Mr. Martin's petition for reconsideration IS DENIED and the Forfeiture
Order,
> 15 FCC Rcd 12699 (Enf. Bur. 2000), released on July 12, 2000, IS AFFIRMED.
>
> 16. Payment of the forfeiture of $4,000 shall be made in the manner
provided
> for in Section 1.80 of the Rules within 30 days of the release of this
Order.
> If the forfeiture is not paid within the period specified, the case may be
> referred to the Department of Justice for collection pursuant to Section
504(a)
> of the Act.10 Payment may be made by mailing a check or similar
instrument,
> payable to the order of the ``Federal Communications Commission,'' to the
> Federal Communications Commission, P.O. Box 73482, Chicago, Illinois
> 60673-7482. The payment should note ``NAL/Acct. No. X3254-003'' referenced
> above. Requests for full payment under an installment plan should be sent
to:
> Chief, Credit and Debt Management Center, 445 12th Street, S.W.,
Washington,
> D.C. 20554.11
>
> 17. IT IS FURTHER ORDERED that a copy of this Order shall be sent by
Certified
> Mail -- Return Receipt Requested, to Mr. Leonard D. Martin at 4415
Spellman,
> Houston, Texas 77035.

> FORFEITURE ORDER
>
>
> Adopted: December 28, 2000 Released: December 29, 2000

>
>
> By the Chief, Enforcement Bureau:
>
>
>
> 1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in
the
> amount of seven thousand dollars ($7,000) against Stephen Fowler d/b/a
Exports
> R Us, for willfully violating Sections 2.803 and 2.815 of the Commission's
> Rules (``Rules'')1 by marketing an unauthorized external frequency power
> amplifier.
>
> 2. On September 28, 2000, the Commission's New Orleans, Louisiana Field
Office
> issued a Notice of Apparent Liability for Forfeiture in the amount of
seven
> thousand dollars ($7,000) to Stephen Fowler d/b/a Exports R Us. Stephen
Fowler
> d/b/a Exports R Us has not filed a response. Based on the information
before
> us, we affirm the forfeiture.
>
> 3. Accordingly, IT IS ORDERED THAT, pursuant to Section 503(b) of the
Act,2 and
> Sections 0.111, 0.311 and 1.80 of the Rules,3 Stephen Fowler d/b/a Exports
R
> Us, IS LIABLE FOR A MONETARY FORFEITURE in the amount $7,000, for willful
> violations of Sections 2.803 and 2.815 of the Rules.
>
> 4. Payment of the forfeiture shall be made in the manner provided for in
> Section 1.80 of the Rules within 30 days of the release of this Order. If
the
> forfeiture is not paid within the period specified, the case may be
referred to
> the Department of Justice for collection pursuant to section 504(a) of the
> Act.4 Payment may be made by mailing a check or similar instrument,
payable to
> the order of the Federal Communications Commission, to the Federal

> By the Chief, Enforcement Bureau:
>
>
> I. INTRODUCTION
> 1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in
the
> amount of eight thousand dollars ($8,000) against Paul E. Holcombe,
licensee of
> amateur radio station K4TOF, Houston, Texas, for willful violation of
Section
> 333 Communications Act of 1934, as amended (``the Act''),1 and Sections
> 97.101(d) and 97.119 of the Commission's Rules.2 The noted violations
involve
> the operation of an amateur radio station so as to willfully or
maliciously
> cause interference to radio communications and the transmission of
unidentified
> amateur radio communications.
>
> 2. On January 13, 2000, the Commission's Resident Agent Office in Houston,
> Texas, issued a Notice of Apparent thousand dollars ($8,000) to Mr.

Holcombe.3
> Mr. Holcombe filed a response on February 4, 2000.
>
>
> II. BACKGROUND
> 3. Between 1993 and 1999, the Commission's Houston Resident Agent Office
> received numerous complaints alleging intentional interference to users on
the
> Memorial Emergency Repeater Association's 145.470/144.870 MHz amateur
radio
> repeater in Houston (``MERA repeater''). The interference was allegedly
caused
> by stations transmitting unidentified tones, inflammatory or derogatory
> remarks, and unmodulated signals, none of which were identified with an
> FCC-assigned call sign.
>
> 4. On May 25, 1999, an FCC agent from the Houston Office, using a mobile
> automatic direction finding (``MADF'') vehicle to monitor the MERA
repeater,
> observed a radio signal consisting of unidentified tones and remarks being
> transmitted on the input frequency of the MERA repeater. The agent
> simultaneously monitored the output frequency of the MERA repeater and
observed
> that this signal would transmit immediately after other stations began
> transmitting, resulting in interference to communications already in
progress
> on the MERA repeater. At about 8:08 p.m., using the MADF equipment and
> direction-finding techniques, the agent determined that the source of the
> unidentified interfering transmissions was a silver Toyota bearing Texas
> license plate DVZ74F. This vehicle was registered to Paul E. Holcombe,
licensee
> of amateur radio station K4TOF. Immediately thereafter, the Commission
agent
> conducted an interview with Mr. Holcombe and inspected the vehicle. Inside
the
> vehicle, the agent found an amateur radio transceiver which was tuned to
the
> MERA repeater frequency pair and was capable of transmitting on the MERA
> repeater frequency pair. Although Mr. Holcombe admitted that he owned the
> vehicle and the amateur radio transceiver and that he was the licensee of
> amateur radio station K4TOF, he denied intentionally making any radio
> transmissions that day.
>
> 5. On June 2, 1999, the Houston Office issued to Mr. Holcombe an Official
> Notice of Violation (``NOV'') for willful and malicious interference to
radio
> communications in violation of Section 333 of the Act and Section
97.101(c)4 of
> the Rules and for transmitting unidentified amateur radio communications

in
> violation of Section 97.119 of the Rules. In his June 4, 1999, response to
the
> NOV, Mr. Holcombe stated that his amateur radio station may have been
> inadvertently activated on May 25, 1999, but he denied any intent to
interfere
> with other stations. Mr. Holcombe also stated that he suffered from a
nerve
> disorder in his hands which makes it difficult for him to manipulate the
> controls of the amateur radio transceiver in his vehicle.
>
> 6. On January 13, 2000, the Houston Office issued the subject NAL, citing
Mr.
> Holcombe for willful violations of Section 333 of the Act and Sections
> 97.101(d) and 97.119 of the Rules. In his February 4, 2000, response to
the
> NAL, Mr. Holcombe denies that the violations occurred. Mr. Holcombe
asserts
> that there was a passenger in his car on May 25, 1999, Dennis Rogers, who
is
> willing to testify that the alleged violations did not occur. Mr. Holcombe
> states that Mr. Rogers told the FCC agent at the time that the alleged
> violations did not take place, but the agent discounted his statement. In
> addition, Mr. Holcombe asserts that the NAL unfairly holds him responsible
for
> violations dating back to 1993. Mr. Holcombe maintains that he is being
charged
> for any and all violations occurring during the period from 1993 to 1999
as a
> ``convenient target.'' Finally, Mr. Holcombe argues that he has been
denied a
> fair hearing of the facts and the right to due process.
>
>
> III. DISCUSSION
> 7. As the NAL explicitly states, the forfeiture amount in this case was
> assessed in accordance with Section 503 of the Act,5 Section 1.80 of the
Rules,
> 6 and The Commission's Forfeiture Policy Statement and Amendment of
Section
> 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd
17087
> (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement''). In
> examining Mr. Holcombe's response, Section 503(b) of the Act requires that
the
> Commission take into account the nature, circumstances, extent and gravity
of
> the violation and, with respect to the violator, the degree of
culpability, any

> history of prior offenses, ability to pay, and other such matters as
justice
> may require. 7
>
> 8. Section 333 of the Act and Section 97.101(d) of the Rules both prohibit
> willful or malicious interference to radio communications. Section 97.119
of
> the Rules prohibits the transmission of unidentified amateur radio
> communications. While Mr. Holcombe generally denies that any violations of
> these provisions occurred, his denial is contradicted by the observations
of
> the FCC agent. On May 25, 1999, using MADF equipment, the investigating
FCC
> agent observed a radio signal consisting of unidentified tones and remarks
> which would transmit on the MERA repeater input frequency immediately
after
> another station began transmitting, resulting in harmful interference to
> communications already in progress on the MERA repeater. The agent
positively
> identified the source of the interfering transmissions to be Mr.
Holcombe's
> vehicle. On inspection of Mr. Holcombe's vehicle, the agent found an
amateur
> radio transceiver which was capable of transmitting on the MERA repeater
> frequency pair and was in fact tuned to the MERA repeater frequency pair.
We
> conclude that this evidence is sufficient to establish that Mr. Holcombe
> willfully and maliciously interfered with radio communications in willful
> violation of Section 333 of the Act and Section 97.101(d) of the Rules. As
> stated in the NAL, the interference was both willful and malicious because
Mr.
> Holcombe timed his transmissions to commence just after other stations had
> begun transmitting. Mr. Holcombe also willfully violated Section 97.119 of
the

OK, so it isn't what you MEANT, it IS what you said, however.

You told him the amount of turns, and that it was OK to wrap around the mast. Bottom line.

Admit it when your wrong, its becoming something of the norm.

>
> How so, Toll?

A. Most people on CB radio are using inferior radios, that DON'T have the filtration necessary to accomodate this
B. Most people on CB are using wider radio transmistters, due to defeating or cranking up ALC.
C. Quite a few people on CB insist of using "half channels" or 5Kc drops to escape the rest.

Because of the 3 reasons listed above, and others, it makes it a little hard to use upper and lower ssb on a frequency.

Hi,
I'm in search of radio related clip-art for CB and HAM type QSL cards for those that don't know these are cards showing often comic images of radio operators with the CB'ers handle (name) or Ham operators calls and their location which they exchange with other people they make contact with over their radios.

Any images of radio or two-way radio items or people operating radios, antennas, etc.

Thanks

Patty

The problem is... there isn't one worth considering. The performance
of an antenna that short is awful. If you only want to get out one
block... then any glass antenna is fine.

Keep these in mind for best performance:
1.) Center of metal mass
2.) Higher
3.) Radiator must be "in-the-clear" (Not adjacent to any solid objects)
4.) Vertically polarized
5.) Longer radiator

amount of
> seventeen thousand dollars ($17,000) to Mr. Martin for the referenced
> violations.3 Mr. Martin filed a response to the NAL. On July 12, 2000, the
> Enforcement Bureau (``Bureau'') released a Forfeiture Order reducing the
> proposed forfeiture to $4,000.
>
> II. BACKGROUND
> 3. Mr. Martin is the former licensee of amateur station KC5WHN. By letter
of
> November 3, 1998, the Commission notified Mr. Martin of complaints
concerning a
> station identifying as KC5WHN. The complaints asserted that the station
> identifying as KC5WHN was operating on frequencies which were not
authorized
> for that station. In his telephone response to that letter, Mr. Martin
denied
> the alleged unauthorized operation.
>
> 4. On February 27, 1999, an agent from the Houston Office (``the agent''),
> using a mobile automatic direction finding (``MADF'') vehicle, observed
voice
> radio transmissions on frequencies 27.535 and 27.545 MHz. Frequency 27.535
MHz
> is allocated exclusively to Industrial radio stations. Frequency 27.545
MHz is
> allocated exclusively to United States Government radio stations. The
> transmissions were unidentified, but the operator responded to the name
> ``Leonard.'' Using the MADF vehicle, the agent determined that the source
of
> the transmissions was an antenna mounted on the residence at 4415
Spellman,
> Houston, Texas, which was then the address of record for Mr. Martin's
amateur
> service station. There was no record of a Commission authorization
permitting
> Mr. Martin to operate on 27.535 MHz or 27.545 MHz.
>
> 5. On March 15, 1999, the agent, using an MADF vehicle, observed voice

radio
> transmissions on 27.370 MHz, a frequency allocated as a ``guard''
frequency
> between authorized channels in the Citizens Band Radio Service. The
operator
> identified himself as ``Leonard.'' Using the MADF vehicle, the agent
determined
> that the source of the transmissions was a vertical antenna mounted on the
> residence at 4415 Spellman, Houston, Texas. Immediately after his
monitoring
> observations, the agent knocked on the door of the residence. Mr. Martin
> answered the door and refused the agent's request to inspect the radio
station
> located in the residence. The agent informed Mr. Martin that his
previously
> observed operation on 27.535 and 27.545 MHz was unlicensed and in
violation of
> Section 301 of the Act because Mr. Martin held no Commission authorization
to
> operate on those frequencies. The agent also informed Mr. Martin that his
> refusal to allow an inspection constituted violation of Section 303(n) of
the
> Act.
>
> 6. On April 2, 1999, the Houston Office issued Mr. Martin an Official
Notice of
> Violation (``NOV'') for violations of Sections 301 and 303(n) of the Act.
In
> Mr. Martin's April 7, 1999, response to the NOV, he stated: ``I now fully
> understand that operation on the frequencies outlined is a violation ...
that
> the FCC has the authority to inspect all radio installations... [and] ...
I
> promise no further action by the Commission will be necessary to insure my
> complete compliance with the FCC Rules....''
>
> 7. On July 22, 1999, Mr. Martin submitted his amateur service license for
> KC5WHN to the Commission for cancellation. By letter of July 23, 1999, the
> Commission acknowledged receipt of the license, and confirmed that it was
> cancelled effective July 23, 1999. The letter also warned Mr. Martin that
any
> unlicensed radio operation would constitute violation of Section 301 of
the
> Act.
>
> 8. On October 19, 1999, the agent investigated an interference complaint
> against Mr. Martin. The agent, using an MADF vehicle, observed voice radio
> transmissions on frequency 27.535 MHz, and determined that the source of
those

> transmissions was a vertical antenna mounted on Mr. Martin's residence, at 4415
> Spellman, Houston, Texas. This frequency is allocated exclusively to licensed
> Industrial radio stations. There was no record of a Commission authorization
> permitting Mr. Martin to operate on 27.535 MHz.
>
> 9. On October 26, 1999, the agent, using an MADF vehicle, observed voice radio
> transmissions on 27.455 MHz, a frequency allocated exclusively to Industrial
> radio stations. Using the MADF vehicle, the agent determined that the source of
> those transmissions was a vertical antenna mounted on Mr. Martin's residence,
> at 4415 Spellman, Houston, Texas. There was no record of a Commission
> authorization permitting Mr. Martin to operate on 27.455 MHz. Immediately after
> the monitoring, the agent knocked on the door of the residence and requested
> permission to inspect the station located there. Mr. Martin, who answered the
> door, refused to allow an inspection.
>
> 10. On March 3, 2000, the Houston Office issued a NAL in the amount of $17,000
> to Mr. Martin for violations of Sections 301 and 303(n) of the Act. In his
> response to the NAL, Mr. Martin requested cancellation of the proposed
> forfeiture but did not deny violating Sections 301 and 303(n).
>
> 11. In its Forfeiture Order, released July 12, 2000, the Bureau concluded that
> Mr. Martin willfully and repeatedly violated Section 301 of the Act by
> operating radio transmitting apparatus without authorization on February 27,
> October 19, and October 26, 1999; and that he willfully and repeatedly violated
> Section 303(n) of the Act by refusing to make his radio installation available
> for inspection on March 15 and October 26, 1999. The Forfeiture Order assessed
> a monetary forfeiture of $4,000 for those violations. The sole basis for
> reducing the $17,000 forfeiture amount proposed by the NAL to $4,000 was Mr.
> Martin's inability to pay more than $4,000.
>
> 12. In his petition for reconsideration of the Forfeiture Order, Mr. Martin

> still does not deny operating radio transmitting apparatus without
> authorization or refusing to make his radio installation available for
> inspection. However, he propounds the following arguments for reduction or
> rescission of the forfeiture:
>
> (a) The Commission ``failed to comply with its own procedures.''
Specifically,
> Mr. Martin asserts that, when an FCC agent requested permission to inspect
his
> radio installation, the agent ``did not provide [Mr. Martin] proper notice
to
> inspect [Mr. Martin's] communications devices or of any pending
investigation,
> or allow [Mr. Martin] an opportunity to have an attorney present'' and did
not
> allow sufficient time for Mr. Martin ``to exercise [his] rights as a U.S.
> Citizen to review any FCC rule or federal law that would permit
unwarranted
> entry into [his] residence by the FCC.''
>
> (b) The Forfeiture Order ``is based upon unsubstantiated allegations with
> insufficient evidentiary support.'' In particular, Mr. Martin contends
that
> another station near his residence ``could have been'' the source of the
> transmissions observed by the FCC agent and that there is insufficient
proof
> that Mr. Martin was the operator the station observed by the FCC agent.
>
> (c) The forfeiture amount is ``grossly disproportionate to the alleged
> violations.'' Specifically, Mr. Martin asserts that the forfeiture amount
of
> $4,000 is unreasonable ``given the nature and extent of the alleged
> violations.'' Mr. Martin also contends that the Bureau did not consider
all the
> required mitigating factors. According to Mr. Martin, these include: the
number
> of occurrences; the corrective measures Mr. Martin agreed to take; Mr.
Martin's
> ability to pay; and ``the fact that no licensed radio station complained
of
> interference nor was there any proof of actual harm caused by any radio
> transmission from [Mr. Martin's] residence.''
>
> (d) The Commission, by imposing a forfeiture against Mr. Martin, has
exceeded
> its authority to regulate interstate communications under the Commerce
Clause
> of the Constitution. Mr. Martin argues that, although Section radio
> communications within one state as well as between states, the statute

must be
> interpreted and applied in a manner consistent with constitutional
limitations.
> In particular Mr. Martin claims that, because there has been no showing
that
> his transmissions were capable of causing harmful interference to
interstate
> communications, he cannot be prohibited from making those transmissions
without
> a license.
>
> (e) The prohibition of transmissions by Mr. Martin on frequencies for
which he
> is not authorized and the imposition of a monetary forfeiture against Mr.
> Martin for making such transmissions violate the First Amendment to the
United
> States Constitution.
>
> (f) The imposition of a forfeiture against Mr. Martin without an
opportunity
> for a hearing or ``to remedy [Mr. Martin's] alleged violation Section 301
of
> the Communications Act'' violates the Due Process clause of the Fourteenth
> Amendment to the United States Constitution.
>
> (g) The Commission is violating the Due Process clause of the Fourteenth
> Amendment to the United States Constitution by ``selectively'' initiating
a
> forfeiture proceeding against Mr. Martin and ``not targeting thousands of
other
> stations'' which operate without authorization.
>
>
> III. DISCUSSION
> 13. We reject the arguments made in Mr. Martin's petition for
reconsideration:
>
> (a) The agent who requested permission to inspect Mr. Martin's radio
> installation on March 15 and October 26, 1999, followed proper procedures.
On
> both occasions the agent informed Mr. Martin that Section 303(n) of the
Act
> authorizes the Commission to inspect radio installations and that the
agent had
> traced transmissions on frequencies for which Mr. Martin was not
authorized to
> Mr. Martin's residence. Immediate, on-the-spot inspections are necessary
in
> such circumstances because ``Any delay . . . can result in changed

conditions
> of the transmitting equipment or its operation, adversely affecting the
> efficiency of inspections." Ralph Yago, 35 FCC 113, 125 (Rev.Bd. 1963).
> Further, nothing in the Communications Act requires the Commission to
allow a
> subject of an inspection to have opportunity to have an attorney present
during
> a civil investigation proceeding.
>
> (b) The Bureau's conclusion that Mr. Martin operated radio transmitting
> apparatus without authorization on February 27, October 19, and October
26,
> 1999, is supported by substantial evidence. On each occasion, the agent
> determined electronically that transmissions on a frequency or frequencies
for
> which Mr. Martin was not authorized emanated from an antenna installed at
Mr.
> Martin's residence. The only person observed at Mr. Martin's residence on
any
> of these occasions was Mr. Martin. Mr. Martin has had ample opportunity to
> provide information, if it exists, which shows that another person
operated the
> station located at his residence; but he has not done so. During the
> transmissions observed on February 27, 1999, the operator of the station
> located at Mr. Martin's residence responded to the name ``Leonard.''
>
> (c) As the NAL explicitly states, the forfeiture amount in this case was
> assessed in accordance with Section 503(b) of the Act,4 Section 1.80 of
the
> Rules,5 and The Commission's Forfeiture Policy Statement and Amendment of
> Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC
Rcd
> 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement'').
> Section 503(b) of the Act requires that, in examining Mr. Martin's
response,
> the Commission take into account the nature, circumstances, extent and
gravity
> of the violation and, with respect to the violator, the degree of
culpability,
> any history of prior offenses, ability to pay, and other such matters as
> justice may require.6 In the Forfeiture Order, we considered all factors
> applicable to this matter and reduced the monetary forfeiture from $17,000
to
> $4,000 on the basis of Mr. Martin's inability to pay a larger amount. Mr.
> Martin has not furnished any information which justifies a further
reduction.
>
> (d) Mr. Martin's Commerce Clause argument is dependent on the incorrect
> assumption that transmissions emanating from his residence on 27.445,

27.535
> and 27.545 MHz are not capable of interfering with interstate
communications.
> In fact, transmissions on those frequencies are capable of long range
> (interstate) propagation through the natural phenomenon known as sky
(``skip'')
> wave. Furthermore, the view that the Commission cannot constitutionally
> regulate communications unless they are capable of interfering with
interstate
> communications is erroneous. See National Broadcasting Co. v. United
States,
> 319 U.S. 190, 209-217 (1943); FCC v. League of Women Voters of California,
468
> U.S. 364, 377 (1984); and Stephen Paul Dunifer, 11 FCC Rcd 718, 727
(1995).
>
> (e) The prohibition against unlicensed operation does not abridge Mr.
Martin's
> First Amendment rights. The United States Supreme Court has held
repeatedly
> that there is no constitutional right to use radio facilities without a
> license. See Red Lion Broadcasting Co. v. FCC, 395 U.S. 367, 388 (1969);
and
> National Broadcasting Co. v. United States, 319 U.S. 190, 227 (1943).
>
> (f) . The Commission did not abridge Mr. Martin's right to procedural Due
> Process by failing to provide opportunities for an evidentiary hearing and
for
> correction of the violations prior to the imposition of the forfeiture.
> Sections 503 and 504 of the Communications Act7 provide safeguards which
> satisfy Due Process requirements.8 See Stephen Paul Dunifer, 11 FCC Rcd
718,
> 729 (1995). Further, nothing in the Communications Act requires the
Commission
> to provide an unlicensed operator the opportunity for an evidentiary
hearing or
> an opportunity to correct a violation prior to imposition of a forfeiture.
>
> (g) The Commission did not abridge Mr. Martin's right to procedural Due
Process
> by proceeding against him ``selectively.'' The case against Mr. Martin
arose
> from the routine investigation of a complaint. As the Commission stated in
> KMAP, Inc., 46 FCC 2d 978 (1974): ``While our limited resources may result
in
> some violators going unpunished, that does not mean that we cannot impose
> sanctions against those violators we do find.''9
>
> 14. We have examined Mr. Martin's petition for reconsideration pursuant to

the
> statutory factors set forth above, and in conjunction with the Policy
Statement
> as well. As a result of our reconsideration, we conclude that Mr. Martin
has
> failed to provide a sufficient justification for rescission or further
> reduction of the forfeiture.
>
> IV. ORDERING CLAUSES
> 15. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 1.106 of the
Rules,
> Mr. Martin's petition for reconsideration IS DENIED and the Forfeiture
Order,
> 15 FCC Rcd 12699 (Enf. Bur. 2000), released on July 12, 2000, IS AFFIRMED.
>
> 16. Payment of the forfeiture of $4,000 shall be made in the manner
provided
> for in Section 1.80 of the Rules within 30 days of the release of this
Order.
> If the forfeiture is not paid within the period specified, the case may be
> referred to the Department of Justice for collection pursuant to Section
504(a)
> of the Act.10 Payment may be made by mailing a check or similar
instrument,
> payable to the order of the ``Federal Communications Commission,'' to the
> Federal Communications Commission, P.O. Box 73482, Chicago, Illinois
> 60673-7482. The payment should note ``NAL/Acct. No. X3254-003'' referenced
> above. Requests for full payment under an installment plan should be sent
to:
> Chief, Credit and Debt Management Center, 445 12th Street, S.W.,
Washington,
> D.C. 20554.11
>
> 17. IT IS FURTHER ORDERED that a copy of this Order shall be sent by
Certified
> Mail -- Return Receipt Requested, to Mr. Leonard D. Martin at 4415
Spellman,
> Houston, Texas 77035.

>
>
> Adopted: December 28, 2000 Released: December 29, 2000

>
>
> By the Chief, Enforcement Bureau:
>
>
>
> 1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in
the
> amount of seven thousand dollars ($7,000) against Stephen Fowler d/b/a
Exports
> R Us, for willfully violating Sections 2.803 and 2.815 of the Commission's
> Rules (``Rules'')1 by marketing an unauthorized external frequency power
> amplifier.
>
> 2. On September 28, 2000, the Commission's New Orleans, Louisiana Field
Office
> issued a Notice of Apparent Liability for Forfeiture in the amount of
seven
> thousand dollars ($7,000) to Stephen Fowler d/b/a Exports R Us. Stephen
Fowler
> d/b/a Exports R Us has not filed a response. Based on the information
before
> us, we affirm the forfeiture.
>
> 3. Accordingly, IT IS ORDERED THAT, pursuant to Section 503(b) of the
Act,2 and
> Sections 0.111, 0.311 and 1.80 of the Rules,3 Stephen Fowler d/b/a Exports
R
> Us, IS LIABLE FOR A MONETARY FORFEITURE in the amount $7,000, for willful
> violations of Sections 2.803 and 2.815 of the Rules.
>
> 4. Payment of the forfeiture shall be made in the manner provided for in
> Section 1.80 of the Rules within 30 days of the release of this Order. If
the
> forfeiture is not paid within the period specified, the case may be
referred to
> the Department of Justice for collection pursuant to section 504(a) of the
> Act.4 Payment may be made by mailing a check or similar instrument,
payable to
> the order of the Federal Communications Commission, to the Federal
> Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482.
The
> payment should note the NAL/Acct. number X3262010. Requests for full
payment
> under an installment plan should be sent to: Chief, Credit and Debt
Management
> Center, 445 12th Street, S.W., Washington, D.C. 20554.

> Amateur radio operator Robert L. Meyers N5WLY
> loses license and pays ($1000) fine
>
> ORDER
>
>
> Adopted: October 5, 2000 Released: October 10, 2000
>
> By the Chief, Enforcement Bureau:
>
> 1. In this Order, we adopt a Consent Decree terminating a forfeiture
proceeding
> against Robert L. Meyers (``Meyers'') concerning operation of an Amateur
Radio
> transmitter in violation of Section 333 of the Communications Act of 1934,
as
> amended (the ``Act''), and Sections 97.101(d) and 97.119(a) of the
Commission's
> Rules (the ``Rules'').1 Meyers agrees to submit his Amateur Radio license
for
> cancellation and not re-apply for an Amateur license for a period of 5
years.
> Meyers further agrees to make a voluntary contribution to the U.S.
Treasury of
> $1,000.
>
> 2. The Enforcement Bureau assessed an $8,000 forfeiture against Meyers for
> violation of Section 333 of the Act and Sections 97.101(d) and 97.119(a)
of the
> Rules.2
>
> 3. The Enforcement Bureau staff and Meyers have negotiated the terms of a
> Consent Decree that would terminate this proceeding. A copy of the Consent
> Decree is attached hereto and incorporated by reference.
>
> 4. We have reviewed the terms of the Consent Decree and evaluated the
facts
> before us. We believe that the public interest would be served by
approving the
> Consent Decree and terminating this proceeding.
>
> 5. Accordingly, IT IS ORDERED, pursuant to Sections 4(i) and 4(j) of the
> Communications Act of 1934, as amended, 47 U.S.C ¬ 154(i) and 154(j), and

the
> authority delegated in Sections 0.111 and 0.311 of the Commission's Rules,
47
> C.F.R. ¿¿ 0.111 and 0.311, that the attached Consent Decree is hereby
ADOPTED.
>
> 6. IT IS FURTHER ORDERED that the voluntary contribution referenced in the
> Consent Decree shall be paid by a check or money order drawn to the order
of
> the ``Federal Communications Commission.'' Reference should be made on the
> check or money order to ``NAL Acct. No. X3254- 001.'' The remittance
should be
> sent to: Forfeiture Collection Section, Finance Branch, Federal
Communications
> Commission, P.O. Box 73482, Chicago, Illinois 60673-7482.
>
> 7. IT IS FURTHER ORDERED that the above captioned forfeiture proceeding IS
> TERMINATED.

>
> FORFEITURE ORDER
>
>
> Adopted: May 2, 2000 Released: May 3, 2000
>
> By the Chief, Enforcement Bureau:
>
>
> I. INTRODUCTION
> 1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in
the
> amount of eight thousand dollars ($8,000) against Paul E. Holcombe,
licensee of
> amateur radio station K4TOF, Houston, Texas, for willful violation of
Section
> 333 Communications Act of 1934, as amended (``the Act''),1 and Sections
> 97.101(d) and 97.119 of the Commission's Rules.2 The noted violations
involve
> the operation of an amateur radio station so as to willfully or
maliciously
> cause interference to radio communications and the transmission of
unidentified
> amateur radio communications.
>
> 2. On January 13, 2000, the Commission's Resident Agent Office in Houston,
> Texas, issued a Notice of Apparent thousand dollars ($8,000) to Mr.

Holcombe.3
> Mr. Holcombe filed a response on February 4, 2000.
>
>
> II. BACKGROUND
> 3. Between 1993 and 1999, the Commission's Houston Resident Agent Office
> received numerous complaints alleging intentional interference to users on
the
> Memorial Emergency Repeater Association's 145.470/144.870 MHz amateur
radio
> repeater in Houston (``MERA repeater''). The interference was allegedly
caused
> by stations transmitting unidentified tones, inflammatory or derogatory
> remarks, and unmodulated signals, none of which were identified with an
> FCC-assigned call sign.
>
> 4. On May 25, 1999, an FCC agent from the Houston Office, using a mobile
> automatic direction finding (``MADF'') vehicle to monitor the MERA
repeater,
> observed a radio signal consisting of unidentified tones and remarks being
> transmitted on the input frequency of the MERA repeater. The agent
> simultaneously monitored the output frequency of the MERA repeater and
observed
> that this signal would transmit immediately after other stations began
> transmitting, resulting in interference to communications already in
progress
> on the MERA repeater. At about 8:08 p.m., using the MADF equipment and
> direction-finding techniques, the agent determined that the source of the
> unidentified interfering transmissions was a silver Toyota bearing Texas
> license plate DVZ74F. This vehicle was registered to Paul E. Holcombe,
licensee
> of amateur radio station K4TOF. Immediately thereafter, the Commission
agent
> conducted an interview with Mr. Holcombe and inspected the vehicle. Inside
the
> vehicle, the agent found an amateur radio transceiver which was tuned to
the
> MERA repeater frequency pair and was capable of transmitting on the MERA
> repeater frequency pair. Although Mr. Holcombe admitted that he owned the
> vehicle and the amateur radio transceiver and that he was the licensee of
> amateur radio station K4TOF, he denied intentionally making any radio
> transmissions that day.
>
> 5. On June 2, 1999, the Houston Office issued to Mr. Holcombe an Official
> Notice of Violation (``NOV'') for willful and malicious interference to
radio
> communications in violation of Section 333 of the Act and Section
97.101(c)4 of
> the Rules and for transmitting unidentified amateur radio communications

in
> violation of Section 97.119 of the Rules. In his June 4, 1999, response to
the
> NOV, Mr. Holcombe stated that his amateur radio station may have been
> inadvertently activated on May 25, 1999, but he denied any intent to
interfere
> with other stations. Mr. Holcombe also stated that he suffered from a
nerve
> disorder in his hands which makes it difficult for him to manipulate the
> controls of the amateur radio transceiver in his vehicle.
>
> 6. On January 13, 2000, the Houston Office issued the subject NAL, citing
Mr.
> Holcombe for willful violations of Section 333 of the Act and Sections
> 97.101(d) and 97.119 of the Rules. In his February 4, 2000, response to
the
> NAL, Mr. Holcombe denies that the violations occurred. Mr. Holcombe
asserts
> that there was a passenger in his car on May 25, 1999, Dennis Rogers, who
is
> willing to testify that the alleged violations did not occur. Mr. Holcombe
> states that Mr. Rogers told the FCC agent at the time that the alleged
> violations did not take place, but the agent discounted his statement. In
> addition, Mr. Holcombe asserts that the NAL unfairly holds him responsible
for
> violations dating back to 1993. Mr. Holcombe maintains that he is being
charged
> for any and all violations occurring during the period from 1993 to 1999
as a
> ``convenient target.'' Finally, Mr. Holcombe argues that he has been
denied a
> fair hearing of the facts and the right to due process.
>
>
> III. DISCUSSION
> 7. As the NAL explicitly states, the forfeiture amount in this case was
> assessed in accordance with Section 503 of the Act,5 Section 1.80 of the
Rules,
> 6 and The Commission's Forfeiture Policy Statement and Amendment of
Section
> 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd
17087
> (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement''). In
> examining Mr. Holcombe's response, Section 503(b) of the Act requires that
the
> Commission take into account the nature, circumstances, extent and gravity
of
> the violation and, with respect to the violator, the degree of
culpability, any

> history of prior offenses, ability to pay, and other such matters as
justice
> may require. 7
>
> 8. Section 333 of the Act and Section 97.101(d) of the Rules both prohibit
> willful or malicious interference to radio communications. Section 97.119
of
> the Rules prohibits the transmission of unidentified amateur radio
> communications. While Mr. Holcombe generally denies that any violations of
> these provisions occurred, his denial is contradicted by the observations
of
> the FCC agent. On May 25, 1999, using MADF equipment, the investigating
FCC
> agent observed a radio signal consisting of unidentified tones and remarks
> which would transmit on the MERA repeater input frequency immediately
after
> another station began transmitting, resulting in harmful interference to
> communications already in progress on the MERA repeater. The agent
positively
> identified the source of the interfering transmissions to be Mr.
Holcombe's
> vehicle. On inspection of Mr. Holcombe's vehicle, the agent found an
amateur
> radio transceiver which was capable of transmitting on the MERA repeater
> frequency pair and was in fact tuned to the MERA repeater frequency pair.
We
> conclude that this evidence is sufficient to establish that Mr. Holcombe
> willfully and maliciously interfered with radio communications in willful
> violation of Section 333 of the Act and Section 97.101(d) of the Rules. As
> stated in the NAL, the interference was both willful and malicious because
Mr.
> Holcombe timed his transmissions to commence just after other stations had
> begun transmitting. Mr. Holcombe also willfully violated Section 97.119 of
the
> Rules because h

hey head, maybe you should come see me down here in galveston county one of these days. we might partake in our local festivities such as ocean cabaret and the likes. i'm a popular guy around here. shit we can skip the club and just wait till there off work if you wanna save the BS.....
-
Nah, I can barely handle the one I have now, don't need to add to that. But I will give ya' a shout when I come through the horn, maybe next summer. I'll break camp somewhere and let ya' know where we are..bring whoever/whatever ya' want..I'll supply the fire and ice cold refreshments. I have a lil brother living in the horn now.. a western leisurely drive may be just what the doctor ordered under the summer sky.

I would suggest looking at the different ham radio and cb radio related
websites. just save the various images to a folder called clip-art.

As far as radio equipment goes, Uniden makes a good radio. As many in here will agree though, just having a good radio isn't the key, having a good antenna is a key part of the setup. You can have a top of the line rig, but if you have a POS antenna it will sound, and perform like a POS radio.If you want a good antenna, the wilson is good, but since you are only swapping the radio and not the antenna, I would suggest a solid mount instead of a mag mount, you'll get better ground and performance. If you are not worried about clearance for a garage ect, you can put the antenna on a stud mount right in the middle of the roof of the suburban. If clearance is an issue you can put a lip mount on the side of the fender in the groove where the hood closes. Or you can get a 102" and put it on the rear bumper. I hope this helps.

As has been pointed out by many there are many options, what I found that worked the best for me, was to mount the antenna on the frint lip of the bed in the middle, right outside the back window of the cab. I used a 102" whip it had enough height, and performed very well, since it was located where it was, it was center of vehicle mass, and it was above the passenger area.

I hope this helps.

Wilson makes a decent antenna, I could also suggest a K-40. There are many
options you can look at.

3106. mounting antenna on newer minivan with plastic body

Newsgroup: rec.radio.cb
Date: 2002-01-23 16:39:38 UTC
From: Henry County American Red Cross <arcweb@bnnorth.net>
Message-ID: <xLB38.2523$w67.264744@cletus.bright.net>
Source record: 113343

I have a friend who is a single mother, and does alot of driving, she would like a radio so she can call for help if she would break down on the roadside, as well as to communicate when she takes long trips.

My question is this, her van is one of those with the plastic/fiberglass bodies, so a traditional mount will not work. I had thought of perhaps getting a clamp mount and putting the antenna on her luggage rack, and then running a wire from ground to where the rack mounts on the inside above the headliner. Also how good do those antennas work that are designed for vehicles w/o ground, like the newer semi's?

Thanks

Keith

Skip the tuneup and get a good power mic. Improve your ears, although the Wilson 500 should be fine for what you want it for. The 4 foot firestik lacks and should be replaced with a full size whip.

Correct me if i am wrong, but I was once told that when the FCC reallocated
the marine band to another part of the spectrum, that they set up broadcast
stations, beacons if you will, to clutter the old marine band freq's so as
to make them unusable.

News to me Keith. And what Marine band might this have been? Marine has bands at 600, 150, 75, 50 meters and beyond. So far as I know, there has not been a major shift since 1947 when the VHF came in and they were removed from the 21-21.45 segment. There is not a lot of activity any more on a lot of them but so far as I know they are still there.

We do assign some shortwave stations out of the usual bands to leave them for transient stations and SW broadcast has expanded its bands and will do so again for digital. In recent memory, KAIJ (100% Gene Scott) got booted off of 5810 to 5755 because NASA needed its freq back and I think WWCR has had to rearrange Brother Stair in the 7400 range for the recent military thing but this is understood going in. It does, however, serve the purposes you mention -- keeping piracy to a gentle roar.

Could well be wrong and it won't be the first time but it is news to me.

December 28, 2000 FCC Issues ($7,000) Forfeiture Order against Stephen Fowler d/b/a Exports R Us
November 9, 2000 FCC INVESTIGATION LEADS TO FINE OF LICENSED AMATEUR RADIO OPERATOR
October 5, 2000 Amateur radio operator Robert L. Meyers N5WLY loses license and pays ($1000) fine
July 25, 2000 FCC INVESTIGATION LEADS TO ARREST OF UNLICENSED AMATEUR RADIO OPERATOR
May 3, 2000 Notice of Apparent Liability in the amount of ($8000) issued against amateur radio operator Paul E. Holcombe K4TOF
April 7, 2000 Forfeiture Order Against "Two Way Shop" in the amount of ($7000) for Offering Linear Amplifiers for Sale

FCC INVESTIGATION LEADS TO ARREST
OF UNLICENSED AMATEUR RADIO OPERATOR

The Federal Communications Commission today announced that an investigation by its Enforcement Bureau led to the July 20, 2000, arrest of Mr. William Flippo, Jupiter, Florida, for operating an unlicensed radio station on amateur radio frequencies and for intentionally causing interference to licensed amateur radio stations.

The Enforcement Bureau, responding to numerous complaints, had previously warned Mr. Flippo to stop his illegal activities and had issued him a $20,000 forfeiture. Despite the Enforcement Bureau's administrative response, Mr. Flippo did not stop his illegal activity.

The United States Attorney's Office for the Southern District of Florida charged Mr. Flippo with four counts of unlicensed radio operation (47 U.S.C. ï¿½ 301) and four counts of interfering with licensed radio stations (47 U.S.C. ï¿½ 333), which he allegedly committed between June 8, 1999, and April 11, 2000. The United States Marshals Service arrested Mr. Flippo at his Jupiter, Florida home, from which it also seized his radio transmitting equipment.

If convicted, Mr. Flippo could face up to one year in prison and a fine of up to $10,000 for each violation.

Commenting on behalf of the Enforcement Bureau, Jane E. Mago, Deputy Chief, commended the members of the amateur radio community, who provided information leading to Mr. Flippo's arrest, and thanked the United States Attorney's Office

for the Southern District of Florida and the United States Marshals Service for their efforts in prosecuting the case.

TOP
FCC INVESTIGATION LEADS TO FINE
FOR LICENSED AMATEUR RADIO OPERATOR

I. INTRODUCTION
1. In this Memorandum Opinion and Order (``Order''), we deny Leonard Martin's petition for reconsideration and affirm the Forfeiture Order1 issued against Leonard D. Martin in the amount of four thousand dollars ($4,000) for willfully and repeatedly violating Sections 301 and 303(n) of the Communications Act of 1934, as amended (``the Act''). 2 The noted violations involve Mr. Martin's operation of a two-way radio station without Commission authorization and his refusal to allow inspections of his radio installation.

2. On March 3, 2000, the Houston Resident Agent Office (``Houston Office'') issued a Notice of Apparent Liability for Forfeiture (``NAL'') in the amount of seventeen thousand dollars ($17,000) to Mr. Martin for the referenced violations.3 Mr. Martin filed a response to the NAL. On July 12, 2000, the Enforcement Bureau (``Bureau'') released a Forfeiture Order reducing the proposed forfeiture to $4,000.

II. BACKGROUND
3. Mr. Martin is the former licensee of amateur station KC5WHN. By letter of November 3, 1998, the Commission notified Mr. Martin of complaints concerning a station identifying as KC5WHN. The complaints asserted that the station identifying as KC5WHN was operating on frequencies which were not authorized for that station. In his telephone response to that letter, Mr. Martin denied the alleged unauthorized operation.

4. On February 27, 1999, an agent from the Houston Office (``the agent''), using a mobile automatic direction finding (``MADF'') vehicle, observed voice radio transmissions on frequencies 27.535 and 27.545 MHz. Frequency 27.535 MHz is allocated exclusively to Industrial radio stations. Frequency 27.545 MHz is allocated exclusively to United States Government radio stations. The transmissions were unidentified, but the operator responded to the name ``Leonard.'' Using the MADF vehicle, the agent determined that the source of the transmissions was an antenna mounted on the residence at 4415 Spellman, Houston, Texas, which was then the address of record for Mr. Martin's amateur service station. There was no record of a Commission authorization permitting Mr. Martin to operate on 27.535 MHz or 27.545 MHz.

5. On March 15, 1999, the agent, using an MADF vehicle, observed voice radio transmissions on 27.370 MHz, a frequency allocated as a ``guard'' frequency between authorized channels in the Citizens Band Radio Service. The operator identified himself as ``Leonard.'' Using the MADF vehicle, the agent determined that the source of the transmissions was a vertical antenna mounted on the residence at 4415 Spellman, Houston, Texas. Immediately after his monitoring observations, the agent knocked on the door of the residence. Mr. Martin answered the door and refused the agent's request to inspect the radio station located in the residence. The agent informed Mr. Martin that his previously

observed operation on 27.535 and 27.545 MHz was unlicensed and in violation of Section 301 of the Act because Mr. Martin held no Commission authorization to operate on those frequencies. The agent also informed Mr. Martin that his refusal to allow an inspection constituted violation of Section 303(n) of the Act.

6. On April 2, 1999, the Houston Office issued Mr. Martin an Official Notice of Violation (``NOV'') for violations of Sections 301 and 303(n) of the Act. In Mr. Martin's April 7, 1999, response to the NOV, he stated: ``I now fully understand that operation on the frequencies outlined is a violation ... that the FCC has the authority to inspect all radio installations... [and] ... I promise no further action by the Commission will be necessary to insure my complete compliance with the FCC Rules....''

7. On July 22, 1999, Mr. Martin submitted his amateur service license for KC5WHN to the Commission for cancellation. By letter of July 23, 1999, the Commission acknowledged receipt of the license, and confirmed that it was cancelled effective July 23, 1999. The letter also warned Mr. Martin that any unlicensed radio operation would constitute violation of Section 301 of the Act.

8. On October 19, 1999, the agent investigated an interference complaint against Mr. Martin. The agent, using an MADF vehicle, observed voice radio transmissions on frequency 27.535 MHz, and determined that the source of those transmissions was a vertical antenna mounted on Mr. Martin's residence, at 4415 Spellman, Houston, Texas. This frequency is allocated exclusively to licensed Industrial radio stations. There was no record of a Commission authorization permitting Mr. Martin to operate on 27.535 MHz.

9. On October 26, 1999, the agent, using an MADF vehicle, observed voice radio transmissions on 27.455 MHz, a frequency allocated exclusively to Industrial radio stations. Using the MADF vehicle, the agent determined that the source of those transmissions was a vertical antenna mounted on Mr. Martin's residence, at 4415 Spellman, Houston, Texas. There was no record of a Commission authorization permitting Mr. Martin to operate on 27.455 MHz. Immediately after the monitoring, the agent knocked on the door of the residence and requested permission to inspect the station located there. Mr. Martin, who answered the door, refused to allow an inspection.

10. On March 3, 2000, the Houston Office issued a NAL in the amount of $17,000 to Mr. Martin for violations of Sections 301 and 303(n) of the Act. In his response to the NAL, Mr. Martin requested cancellation of the proposed forfeiture but did not deny violating Sections 301 and 303(n).

11. In its Forfeiture Order, released July 12, 2000, the Bureau concluded that Mr. Martin willfully and repeatedly violated Section 301 of the Act by operating radio transmitting apparatus without authorization on February 27, October 19, and October 26, 1999; and that he willfully and repeatedly violated Section 303(n) of the Act by refusing to make his radio installation available for inspection on March 15 and October 26, 1999. The Forfeiture Order assessed a monetary forfeiture of $4,000 for those violations. The sole basis for reducing the $17,000 forfeiture amount proposed by the NAL to $4,000 was Mr.

Martin's inability to pay more than $4,000.

12. In his petition for reconsideration of the Forfeiture Order, Mr. Martin still does not deny operating radio transmitting apparatus without authorization or refusing to make his radio installation available for inspection. However, he propounds the following arguments for reduction or rescission of the forfeiture:

(a) The Commission ``failed to comply with its own procedures.'' Specifically, Mr. Martin asserts that, when an FCC agent requested permission to inspect his radio installation, the agent ``did not provide [Mr. Martin] proper notice to inspect [Mr. Martin's] communications devices or of any pending investigation, or allow [Mr. Martin] an opportunity to have an attorney present'' and did not allow sufficient time for Mr. Martin ``to exercise [his] rights as a U.S. Citizen to review any FCC rule or federal law that would permit unwarranted entry into [his] residence by the FCC.''

(b) The Forfeiture Order ``is based upon unsubstantiated allegations with insufficient evidentiary support.'' In particular, Mr. Martin contends that another station near his residence ``could have been'' the source of the transmissions observed by the FCC agent and that there is insufficient proof that Mr. Martin was the operator the station observed by the FCC agent.

(c) The forfeiture amount is ``grossly disproportionate to the alleged violations.'' Specifically, Mr. Martin asserts that the forfeiture amount of $4,000 is unreasonable ``given the nature and extent of the alleged violations.'' Mr. Martin also contends that the Bureau did not consider all the required mitigating factors. According to Mr. Martin, these include: the number of occurrences; the corrective measures Mr. Martin agreed to take; Mr. Martin's ability to pay; and ``the fact that no licensed radio station complained of interference nor was there any proof of actual harm caused by any radio transmission from [Mr. Martin's] residence.''

(d) The Commission, by imposing a forfeiture against Mr. Martin, has exceeded its authority to regulate interstate communications under the Commerce Clause of the Constitution. Mr. Martin argues that, although Section radio communications within one state as well as between states, the statute must be interpreted and applied in a manner consistent with constitutional limitations. In particular Mr. Martin claims that, because there has been no showing that his transmissions were capable of causing harmful interference to interstate communications, he cannot be prohibited from making those transmissions without a license.

(e) The prohibition of transmissions by Mr. Martin on frequencies for which he is not authorized and the imposition of a monetary forfeiture against Mr. Martin for making such transmissions violate the First Amendment to the United States Constitution.

(f) The imposition of a forfeiture against Mr. Martin without an opportunity for a hearing or ``to remedy [Mr. Martin's] alleged violation Section 301 of the Communications Act'' violates the Due Process clause of the Fourteenth Amendment to the United States Constitution.

(g) The Commission is violating the Due Process clause of the Fourteenth Amendment to the United States Constitution by ``selectively'' initiating a forfeiture proceeding against Mr. Martin and ``not targeting thousands of other stations'' which operate without authorization.

III. DISCUSSION
13. We reject the arguments made in Mr. Martin's petition for reconsideration:

(a) The agent who requested permission to inspect Mr. Martin's radio installation on March 15 and October 26, 1999, followed proper procedures. On both occasions the agent informed Mr. Martin that Section 303(n) of the Act authorizes the Commission to inspect radio installations and that the agent had traced transmissions on frequencies for which Mr. Martin was not authorized to Mr. Martin's residence. Immediate, on-the-spot inspections are necessary in such circumstances because ``Any delay . . . can result in changed conditions of the transmitting equipment or its operation, adversely affecting the efficiency of inspections." Ralph Yago, 35 FCC 113, 125 (Rev.Bd. 1963). Further, nothing in the Communications Act requires the Commission to allow a subject of an inspection to have opportunity to have an attorney present during a civil investigation proceeding.

(b) The Bureau's conclusion that Mr. Martin operated radio transmitting apparatus without authorization on February 27, October 19, and October 26, 1999, is supported by substantial evidence. On each occasion, the agent determined electronically that transmissions on a frequency or frequencies for which Mr. Martin was not authorized emanated from an antenna installed at Mr. Martin's residence. The only person observed at Mr. Martin's residence on any of these occasions was Mr. Martin. Mr. Martin has had ample opportunity to provide information, if it exists, which shows that another person operated the station located at his residence; but he has not done so. During the transmissions observed on February 27, 1999, the operator of the station located at Mr. Martin's residence responded to the name ``Leonard.''

(c) As the NAL explicitly states, the forfeiture amount in this case was assessed in accordance with Section 503(b) of the Act,4 Section 1.80 of the Rules,5 and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement''). Section 503(b) of the Act requires that, in examining Mr. Martin's response, the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require.6 In the Forfeiture Order, we considered all factors applicable to this matter and reduced the monetary forfeiture from $17,000 to $4,000 on the basis of Mr. Martin's inability to pay a larger amount. Mr. Martin has not furnished any information which justifies a further reduction.

(d) Mr. Martin's Commerce Clause argument is dependent on the incorrect assumption that transmissions emanating from his residence on 27.445, 27.535 and 27.545 MHz are not capable of interfering with interstate communications. In fact, transmissions on those frequencies are capable of long range (interstate) propagation through the natural phenomenon known as sky (``skip'') wave. Furthermore, the view that the Commission cannot constitutionally

regulate communications unless they are capable of interfering with interstate communications is erroneous. See National Broadcasting Co. v. United States, 319 U.S. 190, 209-217 (1943); FCC v. League of Women Voters of California, 468 U.S. 364, 377 (1984); and Stephen Paul Dunifer, 11 FCC Rcd 718, 727 (1995).

(e) The prohibition against unlicensed operation does not abridge Mr. Martin's First Amendment rights. The United States Supreme Court has held repeatedly that there is no constitutional right to use radio facilities without a license. See Red Lion Broadcasting Co. v. FCC, 395 U.S. 367, 388 (1969); and National Broadcasting Co. v. United States, 319 U.S. 190, 227 (1943).

(f) . The Commission did not abridge Mr. Martin's right to procedural Due Process by failing to provide opportunities for an evidentiary hearing and for correction of the violations prior to the imposition of the forfeiture. Sections 503 and 504 of the Communications Act7 provide safeguards which satisfy Due Process requirements.8 See Stephen Paul Dunifer, 11 FCC Rcd 718, 729 (1995). Further, nothing in the Communications Act requires the Commission to provide an unlicensed operator the opportunity for an evidentiary hearing or an opportunity to correct a violation prior to imposition of a forfeiture.

(g) The Commission did not abridge Mr. Martin's right to procedural Due Process by proceeding against him ``selectively.'' The case against Mr. Martin arose from the routine investigation of a complaint. As the Commission stated in KMAP, Inc., 46 FCC 2d 978 (1974): ``While our limited resources may result in some violators going unpunished, that does not mean that we cannot impose sanctions against those violators we do find.''9

14. We have examined Mr. Martin's petition for reconsideration pursuant to the statutory factors set forth above, and in conjunction with the Policy Statement as well. As a result of our reconsideration, we conclude that Mr. Martin has failed to provide a sufficient justification for rescission or further reduction of the forfeiture.

IV. ORDERING CLAUSES

15. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 1.106 of the Rules, Mr. Martin's petition for reconsideration IS DENIED and the Forfeiture Order, 15 FCC Rcd 12699 (Enf. Bur. 2000), released on July 12, 2000, IS AFFIRMED.

16. Payment of the forfeiture of $4,000 shall be made in the manner provided for in Section 1.80 of the Rules within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act.10 Payment may be made by mailing a check or similar instrument, payable to the order of the ``Federal Communications Commission,'' to the Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should note ``NAL/Acct. No. X3254-003'' referenced above. Requests for full payment under an installment plan should be sent to: Chief, Credit and Debt Management Center, 445 12th Street, S.W., Washington, D.C. 20554.11

17. IT IS FURTHER ORDERED that a copy of this Order shall be sent by Certified Mail -- Return Receipt Requested, to Mr. Leonard D. Martin at 4415 Spellman,

Houston, Texas 77035.

FEDERAL COMMUNICATIONS COMMISSION
TOP
FCC Issues ($7,000) Forfeiture Order against
Stephen Fowler d/b/a Exports R Us

FORFEITURE ORDER

Adopted: December 28, 2000 Released: December 29, 2000

By the Chief, Enforcement Bureau:

1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in the amount of seven thousand dollars ($7,000) against Stephen Fowler d/b/a Exports R Us, for willfully violating Sections 2.803 and 2.815 of the Commission's Rules (``Rules'')1 by marketing an unauthorized external frequency power amplifier.

2. On September 28, 2000, the Commission's New Orleans, Louisiana Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of seven thousand dollars ($7,000) to Stephen Fowler d/b/a Exports R Us. Stephen Fowler d/b/a Exports R Us has not filed a response. Based on the information before us, we affirm the forfeiture.

3. Accordingly, IT IS ORDERED THAT, pursuant to Section 503(b) of the Act,2 and Sections 0.111, 0.311 and 1.80 of the Rules,3 Stephen Fowler d/b/a Exports R Us, IS LIABLE FOR A MONETARY FORFEITURE in the amount $7,000, for willful violations of Sections 2.803 and 2.815 of the Rules.

4. Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to section 504(a) of the Act.4 Payment may be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission, to the Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should note the NAL/Acct. number X3262010. Requests for full payment under an installment plan should be sent to: Chief, Credit and Debt Management Center, 445 12th Street, S.W., Washington, D.C. 20554.

5. IT IS FURTHER ORDERED that a copy of this Forfeiture Order shall be sent by Certified Mail, Return Receipt Requested, to Stephen Fowler d/b/a Exports R Us at 5529 Monroe Hwy, Pineville, Louisiana 71360.

TOP
Amateur radio operator Robert L. Meyers N5WLY
loses license and pays ($1000) fine

ORDER

Adopted: October 5, 2000 Released: October 10, 2000

By the Chief, Enforcement Bureau:

1. In this Order, we adopt a Consent Decree terminating a forfeiture proceeding against Robert L. Meyers (``Meyers'') concerning operation of an Amateur Radio transmitter in violation of Section 333 of the Communications Act of 1934, as amended (the ``Act''), and Sections 97.101(d) and 97.119(a) of the Commission's Rules (the ``Rules'').1 Meyers agrees to submit his Amateur Radio license for cancellation and not re-apply for an Amateur license for a period of 5 years. Meyers further agrees to make a voluntary contribution to the U.S. Treasury of $1,000.

2. The Enforcement Bureau assessed an $8,000 forfeiture against Meyers for violation of Section 333 of the Act and Sections 97.101(d) and 97.119(a) of the Rules.2

3. The Enforcement Bureau staff and Meyers have negotiated the terms of a Consent Decree that would terminate this proceeding. A copy of the Consent Decree is attached hereto and incorporated by reference.

4. We have reviewed the terms of the Consent Decree and evaluated the facts before us. We believe that the public interest would be served by approving the Consent Decree and terminating this proceeding.

5. Accordingly, IT IS ORDERED, pursuant to Sections 4(i) and 4(j) of the Communications Act of 1934, as amended, 47 U.S.C ï¿½ï¿½ 154(i) and 154(j), and the authority delegated in Sections 0.111 and 0.311 of the Commission's Rules, 47 C.F.R. ï¿½ï¿½ 0.111 and 0.311, that the attached Consent Decree is hereby ADOPTED.

6. IT IS FURTHER ORDERED that the voluntary contribution referenced in the Consent Decree shall be paid by a check or money order drawn to the order of the ``Federal Communications Commission.'' Reference should be made on the check or money order to ``NAL Acct. No. X3254- 001.'' The remittance should be sent to: Forfeiture Collection Section, Finance Branch, Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482.

7. IT IS FURTHER ORDERED that the above captioned forfeiture proceeding IS TERMINATED.

TOP
Notice of Apparent Liability in the amount of ($8000)
issued against amateur radio operator Paul E. Holcombe K4TOF

FORFEITURE ORDER

Adopted: May 2, 2000 Released: May 3, 2000

By the Chief, Enforcement Bureau:

I. INTRODUCTION
1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in the amount of eight thousand dollars ($8,000) against Paul E. Holcombe, licensee of amateur radio station K4TOF, Houston, Texas, for willful violation of Section 333 Communications Act of 1934, as amended (``the Act''),1 and Sections 97.101(d) and 97.119 of the Commission's Rules.2 The noted violations involve the operation of an amateur radio station so as to willfully or maliciously cause interference to radio communications and the transmission of unidentified amateur radio communications.

2. On January 13, 2000, the Commission's Resident Agent Office in Houston, Texas, issued a Notice of Apparent thousand dollars ($8,000) to Mr. Holcombe.3 Mr. Holcombe filed a response on February 4, 2000.

II. BACKGROUND

3. Between 1993 and 1999, the Commission's Houston Resident Agent Office received numerous complaints alleging intentional interference to users on the Memorial Emergency Repeater Association's 145.470/144.870 MHz amateur radio repeater in Houston (``MERA repeater''). The interference was allegedly caused by stations transmitting unidentified tones, inflammatory or derogatory remarks, and unmodulated signals, none of which were identified with an FCC-assigned call sign.

4. On May 25, 1999, an FCC agent from the Houston Office, using a mobile automatic direction finding (``MADF'') vehicle to monitor the MERA repeater, observed a radio signal consisting of unidentified tones and remarks being transmitted on the input frequency of the MERA repeater. The agent simultaneously monitored the output frequency of the MERA repeater and observed that this signal would transmit immediately after other stations began transmitting, resulting in interference to communications already in progress on the MERA repeater. At about 8:08 p.m., using the MADF equipment and direction-finding techniques, the agent determined that the source of the unidentified interfering transmissions was a silver Toyota bearing Texas license plate DVZ74F. This vehicle was registered to Paul E. Holcombe, licensee of amateur radio station K4TOF. Immediately thereafter, the Commission agent conducted an interview with Mr. Holcombe and inspected the vehicle. Inside the vehicle, the agent found an amateur radio transceiver which was tuned to the MERA repeater frequency pair and was capable of transmitting on the MERA repeater frequency pair. Although Mr. Holcombe admitted that he owned the vehicle and the amateur radio transceiver and that he was the licensee of amateur radio station K4TOF, he denied intentionally making any radio transmissions that day.

5. On June 2, 1999, the Houston Office issued to Mr. Holcombe an Official Notice of Violation (``NOV'') for willful and malicious interference to radio communications in violation of Section 333 of the Act and Section 97.101(c)4 of the Rules and for transmitting unidentified amateur radio communications in violation of Section 97.119 of the Rules. In his June 4, 1999, response to the NOV, Mr. Holcombe stated that his amateur radio station may have been inadvertently activated on May 25, 1999, but he denied any intent to interfere with other stations. Mr. Holcombe also stated that he suffered from a nerve disorder in his hands which makes it difficult for him to manipulate the controls of the amateur radio transceiver in his vehicle.

6. On January 13, 2000, the Houston Office issued the subject NAL, citing Mr. Holcombe for willful violations of Section 333 of the Act and Sections 97.101(d) and 97.119 of the Rules. In his February 4, 2000, response to the NAL, Mr. Holcombe denies that the violations occurred. Mr. Holcombe asserts that there was a passenger in his car on May 25, 1999, Dennis Rogers, who is willing to testify that the alleged violations did not occur. Mr. Holcombe states that Mr. Rogers told the FCC agent at the time that the alleged violations did not take place, but the agent discounted his statement. In

addition, Mr. Holcombe asserts that the NAL unfairly holds him responsible for violations dating back to 1993. Mr. Holcombe maintains that he is being charged for any and all violations occurring during the period from 1993 to 1999 as a ``convenient target.'' Finally, Mr. Holcombe argues that he has been denied a fair hearing of the facts and the right to due process.

III. DISCUSSION

7. As the NAL explicitly states, the forfeiture amount in this case was assessed in accordance with Section 503 of the Act,5 Section 1.80 of the Rules, 6 and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement''). In examining Mr. Holcombe's response, Section 503(b) of the Act requires that the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require. 7

8. Section 333 of the Act and Section 97.101(d) of the Rules both prohibit willful or malicious interference to radio communications. Section 97.119 of the Rules prohibits the transmission of unidentified amateur radio communications. While Mr. Holcombe generally denies that any violations of these provisions occurred, his denial is contradicted by the observations of the FCC agent. On May 25, 1999, using MADF equipment, the investigating FCC agent observed a radio signal consisting of unidentified tones and remarks which would transmit on the MERA repeater input frequency immediately after another station began transmitting, resulting in harmful interference to communications already in progress on the MERA repeater. The agent positively identified the source of the interfering transmissions to be Mr. Holcombe's vehicle. On inspection of Mr. Holcombe's vehicle, the agent found an amateur radio transceiver which was capable of transmitting on the MERA repeater frequency pair and was in fact tuned to the MERA repeater frequency pair. We conclude that this evidence is sufficient to establish that Mr. Holcombe willfully and maliciously interfered with radio communications in willful violation of Section 333 of the Act and Section 97.101(d) of the Rules. As stated in the NAL, the interference was both willful and malicious because Mr. Holcombe timed his transmissions to commence just after other stations had begun transmitting. Mr. Holcombe also willfully violated Section 97.119 of the Rules because h

I don't know Keith. Looks like Richard doesn't know either. Maybe a search
around the WEB may turn up some info on that subject. Would be interesting
to find out.

Skipp,
I think he's busy trying to find _any_ evidence that would validate his
assertion that "clipping" a final is standard, Key Clown behaviour.
I'm sure he has little time for anything else. Certainly not enough time
to practice code so he can pass that 5 word per minute thingy. :-)

> 10. On March 3, 2000, the Houston Office issued a NAL in the amount of
$17,000
> to Mr. Martin for violations of Sections 301 and 303(n) of the Act. In his
> response to the NAL, Mr. Martin requested cancellation of the proposed
> forfeiture but did not deny violating Sections 301 and 303(n).
>
> 11. In its Forfeiture Order, released July 12, 2000, the Bureau concluded
that
> Mr. Martin willfully and repeatedly violated Section 301 of the Act by
> operating radio transmitting apparatus without authorization on February
27,
> October 19, and October 26, 1999; and that he willfully and repeatedly
violated
> Section 303(n) of the Act by refusing to make his radio installation
available
> for inspection on March 15 and October 26, 1999. The Forfeiture Order
assessed
> a monetary forfeiture of $4,000 for those violations. The sole basis for
> reducing the $17,000 forfeiture amount proposed by the NAL to $4,000 was

Mr.
> Martin's inability to pay more than $4,000.
>
> 12. In his petition for reconsideration of the Forfeiture Order, Mr.
Martin
> still does not deny operating radio transmitting apparatus without
> authorization or refusing to make his radio installation available for
> inspection. However, he propounds the following arguments for reduction or
> rescission of the forfeiture:
>
> (a) The Commission ``failed to comply with its own procedures.''
Specifically,
> Mr. Martin asserts that, when an FCC agent requested permission to inspect
his
> radio installation, the agent ``did not provide [Mr. Martin] proper notice
to
> inspect [Mr. Martin's] communications devices or of any pending
investigation,
> or allow [Mr. Martin] an opportunity to have an attorney present'' and did
not
> allow sufficient time for Mr. Martin ``to exercise [his] rights as a U.S.
> Citizen to review any FCC rule or federal law that would permit
unwarranted
> entry into [his] residence by the FCC.''
>
> (b) The Forfeiture Order ``is based upon unsubstantiated allegations with
> insufficient evidentiary support.'' In particular, Mr. Martin contends
that
> another station near his residence ``could have been'' the source of the
> transmissions observed by the FCC agent and that there is insufficient
proof
> that Mr. Martin was the operator the station observed by the FCC agent.
>
> (c) The forfeiture amount is ``grossly disproportionate to the alleged
> violations.'' Specifically, Mr. Martin asserts that the forfeiture amount
of
> $4,000 is unreasonable ``given the nature and extent of the alleged
> violations.'' Mr. Martin also contends that the Bureau did not consider
all the
> required mitigating factors. According to Mr. Martin, these include: the
number
> of occurrences; the corrective measures Mr. Martin agreed to take; Mr.
Martin's
> ability to pay; and ``the fact that no licensed radio station complained
of
> interference nor was there any proof of actual harm caused by any radio
> transmission from [Mr. Martin's] residence.''
>
> (d) The Commission, by imposing a forfeiture against Mr. Martin, has

exceeded
> its authority to regulate interstate communications under the Commerce
Clause
> of the Constitution. Mr. Martin argues that, although Section radio
> communications within one state as well as between states, the statute
must be
> interpreted and applied in a manner consistent with constitutional
limitations.
> In particular Mr. Martin claims that, because there has been no showing
that
> his transmissions were capable of causing harmful interference to
interstate
> communications, he cannot be prohibited from making those transmissions
without
> a license.
>
> (e) The prohibition of transmissions by Mr. Martin on frequencies for
which he
> is not authorized and the imposition of a monetary forfeiture against Mr.
> Martin for making such transmissions violate the First Amendment to the
United
> States Constitution.
>
> (f) The imposition of a forfeiture against Mr. Martin without an
opportunity
> for a hearing or ``to remedy [Mr. Martin's] alleged violation Section 301
of
> the Communications Act'' violates the Due Process clause of the Fourteenth
> Amendment to the United States Constitution.
>
> (g) The Commission is violating the Due Process clause of the Fourteenth
> Amendment to the United States Constitution by ``selectively'' initiating
a
> forfeiture proceeding against Mr. Martin and ``not targeting thousands of
other
> stations'' which operate without authorization.
>
>
> III. DISCUSSION
> 13. We reject the arguments made in Mr. Martin's petition for
reconsideration:
>
> (a) The agent who requested permission to inspect Mr. Martin's radio
> installation on March 15 and October 26, 1999, followed proper procedures.
On
> both occasions the agent informed Mr. Martin that Section 303(n) of the
Act
> authorizes the Commission to inspect radio installations and that the
agent had

> traced transmissions on frequencies for which Mr. Martin was not
authorized to
> Mr. Martin's residence. Immediate, on-the-spot inspections are necessary
in
> such circumstances because ``Any delay . . . can result in changed
conditions
> of the transmitting equipment or its operation, adversely affecting the
> efficiency of inspections." Ralph Yago, 35 FCC 113, 125 (Rev.Bd. 1963).
> Further, nothing in the Communications Act requires the Commission to
allow a
> subject of an inspection to have opportunity to have an attorney present
during
> a civil investigation proceeding.
>
> (b) The Bureau's conclusion that Mr. Martin operated radio transmitting
> apparatus without authorization on February 27, October 19, and October
26,
> 1999, is supported by substantial evidence. On each occasion, the agent
> determined electronically that transmissions on a frequency or frequencies
for
> which Mr. Martin was not authorized emanated from an antenna installed at
Mr.
> Martin's residence. The only person observed at Mr. Martin's residence on
any
> of these occasions was Mr. Martin. Mr. Martin has had ample opportunity to

> Amateur radio operator Robert L. Meyers N5WLY
> loses license and pays ($1000) fine
>
> ORDER
>
>
> Adopted: October 5, 2000 Released: October 10, 2000
>
> By the Chief, Enforcement Bureau:
>
> 1. In this Order, we adopt a Consent Decree terminating a forfeiture proceeding
> against Robert L. Meyers (``Meyers'') concerning operation of an Amateur Radio
> transmitter in violation of Section 333 of the Communications Act of 1934, as
> amended (the ``Act''), and Sections 97.101(d) and 97.119(a) of the Commission's
> Rules (the ``Rules'').1 Meyers agrees to submit his Amateur Radio license for
> cancellation and not re-apply for an Amateur license for a period of 5 years.
> Meyers further agrees to make a voluntary contribution to the U.S. Treasury of
> $1,000.
>
> 2. The Enforcement Bureau assessed an $8,000 forfeiture against Meyers for
> violation of Section 333 of the Act and Sections 97.101(d) and 97.119(a) of the
> Rules.2
>
> 3. The Enforcement Bureau staff and Meyers have negotiated the terms of a
> Consent Decree that would terminate this proceeding. A copy of the Consent
> Decree is attached hereto and incorporated by reference.
>
> 4. We have reviewed the terms of the Consent Decree and evaluated the facts
> before us. We believe that the public interest would be served by

approving the
> Consent Decree and terminating this proceeding.
>
> 5. Accordingly, IT IS ORDERED, pursuant to Sections 4(i) and 4(j) of the
> Communications Act of 1934, as amended, 47 U.S.C ⁄⁄ 154(i) and 154(j), and
the
> authority delegated in Sections 0.111 and 0.311 of the Commission's Rules,
47
> C.F.R. ⁄⁄ 0.111 and 0.311, that the attached Consent Decree is hereby
ADOPTED.
>
> 6. IT IS FURTHER ORDERED that the voluntary contribution referenced in the

>
>
> Adopted: May 2, 2000 Released: May 3, 2000
>
> By the Chief, Enforcement Bureau:
>
>
> I. INTRODUCTION
> 1. In this Forfeiture Order (``Order''), we issue a monetary forfeiture in
the
> amount of eight thousand dollars ($8,000) against Paul E. Holcombe,
licensee of
> amateur radio station K4TOF, Houston, Texas, for willful violation of
Section
> 333 Communications Act of 1934, as amended (``the Act''),1 and Sections
> 97.101(d) and 97.119 of the Commission's Rules.2 The noted violations
involve
> the operation of an amateur radio station so as to willfully or
maliciously
> cause interference to radio communications and the transmission of

unidentified
> amateur radio communications.
>
> 2. On January 13, 2000, the Commission's Resident Agent Office in Houston,
> Texas, issued a Notice of Apparent thousand dollars ($8,000) to Mr.
Holcombe.3
> Mr. Holcombe filed a response on February 4, 2000.
>
>
> II. BACKGROUND
> 3. Between 1993 and 1999, the Commission's Houston Resident Agent Office
> received numerous complaints alleging intentional interference to users on
the
> Memorial Emergency Repeater Association's 145.470/144.870 MHz amateur
radio
> repeater in Houston (``MERA repeater''). The interference was allegedly
caused
> by stations transmitting unidentified tones, inflammatory or derogatory
> remarks, and unmodulated signals, none of which were identified with an
> FCC-assigned call sign.
>
> 4. On May 25, 1999, an FCC agent from the Houston Office, using a mobile
> automatic direction finding (``MADF'') vehicle to monitor the MERA
repeater,
> observed a radio signal consisting of unidentified tones and remarks being
> transmitted on the input frequency of the MERA repeater. The agent
> simultaneously monitored the output frequency of the MERA repeater and
observed
> that this signal would transmit immediately after other stations began
> transmitting, resulting in interference to communications already in
progress
> on the MERA repeater. At about 8:08 p.m., using the MADF equipment and
> direction-finding techniques, the agent determined that the source of the
> unidentified interfering transmissions was a silver Toyota bearing Texas
> license plate DVZ74F. This vehicle was registered to Paul E. Holcombe,
licensee
> of amateur radio station K4TOF. Immediately thereafter, the Commission
agent
> conducted an interview with Mr. Holcombe and inspected the vehicle. Inside
the
> vehicle, the agent found an amateur radio transceiver which was tuned to
the
> MERA repeater frequency pair and was capable of transmitting on the MERA
> repeater frequency pair. Although Mr. Holcombe admitted that he owned the
> vehicle and the amateur radio transceiver and that he was the licensee of
> amateur radio station K4TOF, he denied intentionally making any radio
> transmissions that day.
>
> 5. On June 2, 1999, the Houston Office issued to Mr. Holcombe an Official

> Notice of Violation (``NOV'') for willful and malicious interference to
radio
> communications in violation of Section 333 of the Act and Section
97.101(c)4 of
> the Rules and for transmitting unidentified amateur radio communications
in
> violation of Section 97.119 of the Rules. In his June 4, 1999, response to
the
> NOV, Mr. Holcombe stated that his amateur radio station may have been
> inadvertently activated on May 25, 1999, but he denied any intent to
interfere
> with other stations. Mr. Holcombe also stated that he suffered from a
nerve
> disorder in his hands which makes it difficult for him to manipulate the
> controls of the amateur radio transceiver in his vehicle.
>
> 6. On January 13, 2000, the Houston Office issued the subject NAL, citing
Mr.
> Holcombe for willful violations of Section 333 of the Act and Sections
> 97.101(d) and 97.119 of the Rules. In his February 4, 2000, response to
the
> NAL, Mr. Holcombe denies that the violations occurred. Mr. Holcombe
asserts
> that there was a passenger in his car on May 25, 1999, Dennis Rogers, who
is
> willing to testify that the alleged violations did not occur. Mr. Holcombe
> states that Mr. Rogers told the FCC agent at the time that the alleged
> violations did not take place, but the agent discounted his statement. In
> addition, Mr. Holcombe asserts that the NAL unfairly holds him responsible
for
> violations dating back to 1993. Mr. Holcombe maintains that he is being
charged
> for any and all violations occurring during the period from 1993 to 1999
as a
> ``convenient target.'' Finally, Mr. Holcombe argues that he has been
denied a
> fair hearing of the facts and the right to due process.
>
>
> III. DISCUSSION
> 7. As the NAL explicitly states, the forfeiture amount in this case was
> assessed in accordance with Section 503 of the Act,5 Section 1.80 of the
Rules,
> 6 and The Commission's Forfeiture Policy Statement and Amendment of
Section
> 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd
17087
> (1997), recon. denied, 15 FCC Rcd 303 (1999) (``Policy Statement''). In
> examining Mr. Holcombe's response, Section 503(b) of the Act requires that

the
> Commission take into account the nature, circumstances, extent and gravity
of
> the violation and, with respect to the violator, the degree of
culpability, any
> history of prior offenses, ability to pay, and other such matters as
justice
> may require. 7
>
> 8. Section 333 of the Act and Section 97.101(d) of the Rules both prohibit
> willful or malicious interference to radio communications. Section 97.119
of
> the Rules prohibits the transmission of unidentified amateur radio
> communications. While Mr. Holcombe generally denies that any violations of
> these provisions occurred, his denial is contradicted by the observations
of
> the FCC agent. On May 25, 1999, using MADF equipment, the investigating
FCC
> agent observed a radio signal consisting of unidentified tones and remarks
> which would transmit on the MERA repeater input frequency immediately
after
> another station began transmitting, resulting in harmful interference to
> communications already in progress on the MERA repeater. The agent
positively
> identified the source of the interfering transmissions to be Mr.
Holcombe's
> vehicle. On inspection of Mr. Holcombe's vehicle, the agent found an
amateur
> radio transceiver which was capable of transmitting on the MERA repeater
> frequency pair and was in fact tuned to the MERA repeater frequency pair.
We
> conclude that this evidence is sufficient to establish that Mr. Holcombe
> willfully and maliciously interfered with radio communications in willful
> violation of Section 333 of the Act and Section 97.101(d) of the Rules. As
> stated in the NAL, the interference was both willful and malicious because
Mr.
> Holcombe timed his transmissions to commence just after other stations had
> begun transmitting. Mr. Holcombe also willfully violated Section 97.119 of
the
> Rules because h

Anyone that would trust you for a minute is certifiably insane.

Funny, I'll bet you wish you were a certified, amateur radio operator.

How's that code practice coming?

Jeff

Hi Mopar.

NTL give a totally free internet service...
No call charges for time online,
No monthly fee.
And according to my Bro, he gets a first time connection every time.

All you have to do is use their 'phone service (min spend £15 / month), and
the internet is free.
Last I heard, they had a waiting list and it took over a month to get the
disk.

The major bummer is that the cable services have not reached me yet.

Brainbuster.

Pick up line...
Oh! Sorry, I thought that was a braille name tag.

course they wont be the same pussy boy you use both a aol account and
an at home account until they pull the plug then you will be usieing
your comcast and aol acccount fag. all anyone has to do is look at the
steelgangasta post and they can see where you post from at home then 6
minutes later from aol even for an inbread fuckhead like you can
figure itout.

just finished school sweet blonde this is a illegal preeteen sex movie dont
download it unless you're 18
> http://cain.kaist.ac.kr/~aimemoi/sex_movie.zip
> tqykldzbsdzkqobfpuiqpzidc
====

If it is illegal porn, don't download it unless you like prison food!!!!!!
Several in this country have been caught downloading illegal porn, and sent
directly to jail. They did not pass "go", and did not collect £200.

One local chap (central UK) got caught by the police who were tracking site
visitors. The site was in another country and could not be stopped, but they
could (and often do) get the visitors.
The chap got a prison sentence, and free lifetime registration on the
"pervert" register. So he is now labelled as a "kiddie fidler".

Recently, a another local man was caught thanks to the co-operation of
the police in America... so countries do work together to stop child porn .
According to the newspaper, even the police were shocked by the sick pictures
he had on his system.

Also, the "glam rock" star "Gary Glitter" got caught with illegal porn
downloaded from the internet.

Brainbuster.

3136. Re: mounting antenna on newer minivan with plastic body

Newsgroup: rec.radio.cb
Date: 2002-01-23 21:04:28 UTC
From: "Leland C. Scott" <no-spam@junk-mail.net>
Message-ID: <a2n7k3$67k$1@news.bignet.net>
Source record: 113369

Radio Shack sells a 1/2 wave antenna made specifically for plastic vehicular
car bodies and marine use where a ground plane is not readily available. The
cost is about $30 to $40. This is what I would recommend since it gets rid
of the chore of screwing around trying to find a good ground for a regular
1/4 wave antenna to work against. You also then gain the freedom to mount
the antenna where you want too.

I have a GE base station that is sideband and am band.This radio is the one with two antenna inputThe Model is SSB SuperBase with 80 SSB and 40 AM. I do know its a collectors radio,but I am trying to find out what it is worth.I was interested in selling it for the right offer.It is in great shape and never been modified .It has a hand mike and a base desk mike with it.If interested,please email me as I don't watch the groups that much. Any interest in it?Make me a decent offer. I am looking for a good high end scanner also.Let me know what you got.

Tell your friend to get a cheap cell phone plan because it will prove more
reliable in emergencies. The
Childrens Band on a trip will be nothing but an embarassment to her ears.

Selling a 148 GTL, mobil bracket, original mike and power cord. The unit is a 8.5 out of 10 aestheticaly and works great on AM and SSB.

Will provide a picture of the radio if interested, asking $120. and I pay for the shipping USPS First Class insured.

E-mail me for more details on this radio.

Gil

The 'bottom line' of my post wasn't that it's ok to wrap it around the
mast, but that there are many ways to get the job done and some ways
are better than others. It seems that everyone else understood that
except for you.

>Admit it when your wrong, its becoming something of the norm.

I do admit when I'm wrong. Learn to read.

For there to be a "high and mighty road" there must also be a
"low-down dirty road". Is that the road you wish to identify yourself
with? Sure looks like it to me.

To accomodate what? 3kHz bandwidth? Or do you mean sideband filters?
The newer method of SSB modulation works better than the crystal
filters of the past, and the crystal filters worked pretty well. So
what 'filtration' are you talking about, Toll?

>B. Most people on CB are using wider radio transmistters, due to defeating
>or cranking up ALC.

"wider radio transmistters"? LOL! Snipping the limiters just defeats
any 'filtration'; and contrary to the opinion of a few in this
newsgroup, most CB radios do not have their limiters disabled.

>C. Quite a few people on CB insist of using "half channels" or 5Kc drops to
>escape the rest.

What does that have to do with the bandwidth of SSB, except that
illegal operators are more prone to interfere with sidebanders?

>Because of the 3 reasons listed above, and others, it makes it a little hard
>to use upper and lower ssb on a frequency.

Way off base again, Toll. In my area you can hear people on 35-40
cooperating quite well when operating on SSB. The only way it works is
if everyone uses the same standards with their radios: Same freqs,
same bandwidth, etc. The only people that have any problems are those
with the 5kHz slide, snipped limiters, and radios that are detuned
because someone tried to tweak them for a couple extra watts.

<snip>

A woman stranded in a remote area calling for help on a CB radio is
the quickest way she can get into deeper trouble. That lesson was
learned by many in the 70's.

> Tell your friend to get a cheap cell phone plan because it will prove more
> reliable in emergencies.

most people don't realize that ANY working cell phone (even those without "plans") are capable of dialling and connecting to the 911 network.

here in town, a friend recently bought an expensive cell plan and got a cheapie Nokia that he didn't want to use.

he gave me the phone and i transferred it to my sister who can use it to dial 911 in an emergency.

totally free.

(if the person in question is travelling between states, you might have a few lapses in cell coverage - but generally any path along a major interstate will have digital and analog cell site coverage)

CB/FRS/GMRS/MURS is all good, but i would not personally rely on those services to get me out of an emergency situation - be redundant.

CB and cell phone might be all she needs.

> am looking at the 520 XL.

i just picked up a used Uniden Grant XL.

i looooooooove it to death!

no mods - no tweaks - just a Uniden Grant XL with a very tall Solarcon
Antron 99 10/11m antenna.

if you haven't already bought, and CB size isn't important (the
Grant's are fairly large - lawbook size), check out ebay or
www.uniden.com and look into their refurbished/used section.

3168. Live uhf cb audio stream from SYDNEY AUSTRALIA

Newsgroup: rec.radio.cb
Date: 2002-01-24 02:25:05 UTC
From: JDJDJD <syd_01@hotmail.com>
Message-ID: <1011839146.517018@bugstomper.ihug.com.au>
Source record: 113450

Hello all worthwhile and worthless CBers,

If you feel the desire or are otherwise just curious I have provided a live audio stream of the SYD01 CB repeater service located in Sydney Australia. (LET YOUR MUM LISTEN!!!) To access
the stream is easy :

1: Open winamp and pres CTRL and L
2: The address is JD.DYNIP.COM:8000
3:Connect to the server and allow buffering time
4:Stand back and wait for fireworks.

The streaming software is provided by shoutcast.com and is shareware. The PC is p4 1.8Ghz with 256 rdram. The pc is fitted with a winradio card that rx on 476.425 Mhz. This audio source is fed to the shoutcast source server via a 100Mb LAN. Winradio hears the repeater fairly noise free and this audio is then encoded into a mono audio stream that dial-up users can hear through winamp. The encoder reencodes that audio at 24Kbps,22050Khz in mono. Connection is only on a V92 modem and therefore only 2 users can be on simultaneously until I can get more bandwidth. Also one user may stay on for 10 mins max and then they will be kicked so another user gets a chance at a free slot on the server. If the server is busy set your retrys to 30sec and be patient. Currently no one is on the ban list for the server.

Comments both ugly and nice are welcome.

Have a great day...

I ran a grant XL for years, and before that I had a 148 GTL, one of the first ones, both were great litle radios, ran them off a small powersupply I built myself. Started out with a 4ft whip mounted to the desk in my bedroom, and slowly moved up.

From: timnepo@aol.com
Message-ID: <20020123221326.23205.00000111@mb-fp.aol.com>
Source record: 113468

<< Radio Shack sells a 1/2 wave antenna made specifically for plastic vehicular car bodies and marine use where a ground plane is not readily available. The cost is about $30 to $40. This is what I would recommend since it gets rid of the chore of screwing around trying to find a good ground for a regular 1/4 wave antenna to work against. You also then gain the freedom to mount the antenna where you want too. >>

Leland when are you gonna stop screwing around with legal CB and get a real amp?

Two more references for the measurement of PEP...

REF 1:
The ARRL Handbook for radio amateurs. 1999
"The Standard in Applied Electronics and Communications"

Page 6.7
<quote>
PEP is the average power supplied to the antenna
transmission line during one RF cycle at the crest
of the modulation envelope, taken under normal
operating conditions. Since calculation of PEP requires
the average power of the cycle, multiply the PEV by
0.707 to obtain the RMS value. Then calculate power
by using the square of the voltage divided by the load
resistance.

$$PEP = \frac{(PEV \times 0.707)^2}{R}$$
</quote>

PEV is defined in that section as "Peak Envelope Voltage", and is shown
on a diagram as being taken from one HALF of the cycle (positive half).

REF 2:
Practical Radio Frequency Test and Measurement.
"A Technicians Handbook"
Author: Joseph J. Carr
Print date: 1999

Page 246
<quote>
the IPP value is not the same as the PEP value because
PEP is based on the RMS value
</quote>

IPP is defined on that page as :
Vp^2 / R

Where
IPP is the instantaneous peak power
Vp is the peak voltage (positive half cycle)

Hey, Sparky...

I have now given references to FOUR good books and a government
document. I would suggest *you* visit your local library (while it is
open), pick up the following books... and read those puppies from
front to back (or at least the pages I quoted).

Radio Handbook 23rd edition.

The ARRL Handbook for radio amateurs.
76th Edition (1999).

Practical Radio Frequency Test and Measurement.
Joseph J. Carr.

Electrical and Electronic Principles 2 Checkbook.
Bird and May

Hi Bill.

Well, it says 10,000 on the spec sheet... but it only does that much
just before an election.
At any other time, the "Auto stand-by" feature kicks in.

Up until about 1972, the commercial "marine" band was in the 2.1 Mhz
range on AM. After that they created the current VHF band on FM at 156
Mhz, and continued to allow the 2.1 Mhz band to be used for SSB radios.

Two hunters from Michigan--(true story)
This was broadcast on Public Radio, a true report of an incident in Michigan:

A guy buys a brand new Lincoln Navigator for $42,500 and has $560 monthly payments. He and a friend go duck hunting in winter, and of course all the lakes are frozen. These two guys go out on the lake with their guns, a dog, and of course the new vehicle.
They drive out onto the lake ice and get ready. Now, they want to make some kind of a natural landing area for the ducks, something for the decoys to float on. In order to make a hole large enough to look like something a wandering duck would fly down and land on, it is going to take a little more effort than an ice hole drill.
So, out of the back of the new Navigator comes a stick of dynamite with a short, 40-second fuse.
Now these two Rocket Scientists do take into consideration that they want to place the stick of dynamite on the ice at a location far from where they are standing (and the new Navigator), because they don't want to take the risk of slipping on the ice when they run from the burning fuse and possibly go up in smoke with the resulting blast.

They light the 40-second fuse and throw the dynamite.
Remember a couple of paragraphs back when I mentioned the vehicle, the guns and the dog? Let's talk about the dog: A highly trained Black Lab used for RETRIEVING. Especially things thrown by the owner.
You guessed it, the dog takes off at a high rate of doggy speed on the ice and captures the stick of dynamite with the burning 40-second fuse about the time it hits the ice. The two men yell, scream, wave their arms and wonder what to do now.
The dog, cheered on, keeps coming. One of the guys grabs the shotgun and shoots the dog. The shotgun is loaded with # 8 buckshot, hardly big enough to stop a Black Lab. The dog stops for a moment, slightly confused, but continues on. Another shot and this time the dog, still standing, becomes really confused and of course terrified, thinking these two geniuses have gone insane.
The dog takes off to find cover, under the brand new Navigator. The men continue to yell as they run. The exhaust pipe on the truck is still hot, so the dog yelps and drops the dynamite under the truck, and takes off after his master. Then --BOOM-- the truck is blown to bits and sinks to the bottom of the lake in a very large hole, leaving the two idiots standing there with this "I can't believe this happened"
look on their faces.

The insurance company says that sinking a vehicle in a lake by illegal use of explosives is not covered. He still had yet to make the first of those $560 a month payments!

Subject: AFC Championship Game

A first grade teacher in New England was explaining to her class that she is a Patriots fan. She asks her students to raise their hands if they too, are Patriot fans.
Everyone in the class raises their hand, except a little girl. The teacher looks at the girl with surprise and says, "Janie, why didn't you raise your hand?"
"Because I'm not a Patriots fan," she replied. The teacher, still shocked, asked, "Well, if you are not a Patriots fan, then who are you a fan of?"
"I am a Steelers fan , and proud of it," Janie replied.
The teacher could not believe her ears. "Janie, why are you a Steelers fan?"
"Because my mom is a Steelers fan, and my dad is a Steelers fan, so I'm a Steelers fan too!"
"Well," said the teacher in an obviously annoyed tone, "that is no reason for you to be a Steelers fan. You don't have to be just like your parents all of the time. What if your Mom was a moron and your dad was a moron, what would you be then?"
"Then," Janie smiled, "We'd be Patriots fans."

Philthadelphia iggles could have been used just the same, but Pittsburgh won't have the pleasure of cleaning their clocks 'cause they're getting embarrassed and discarded this Sunday by St. Lou.

Aaron, are you trying to set the record for the most posts?
If you are... I don't think we can count posts that say the same damn thing over and over about illegal "this" and illegal "that". You seem to be a very slow learner. Can't you see that you are not furthering your cause by continuing your current approach.

The fact is... you have no authority.
Maybe you should find someone who does... and leave the policing to them.

It's funny how anyone can be so stupid as to claim 80% efficiency
from an amp that has zero bias. I have probably built more
equipment, including amps than you have seen.

And is still in use although I am told that the CG no longer monitors
2182. All that was done was to outlaw AM on all Marine/Air freqs except
the VHF/UHF air where the capture effect of FM would present a safety
hazard.

The VHF freqs were there much earlier and at the time was required before
you could get an HF radio license.

From: Lou <tech@dp.net>
Message-ID: <a2pg28$16g2$1@news.dp.net>
Source record: 113717

I will add my two cents here. I'm only replying. Sorry for the off topic....

I don't care what store it is, Wal Mart, K Mart, Target, Sams, etc. The bigger stores and malls all offer a chance at a growing local economy with jobs and better prices. Short term, maybe they do. One recent example here, is AMES took over the failing HILLS department stores, offered the employees to keep their jobs, only to close the doors themselves in a majority of their locations.

While they offer to spur the economy, they shut down the "mom and pop" and other small businesses, that usually are more into "personal" service. Where as with recent horror stories, the Marts have been said to blow the customers off and offer little or no help. Hence one recent TV news report as to why the local K-Marts are going south..... Unstocked shelves and staff too busy or hurried to offer assistance.

Maybe management is "a" key issue.... I won't debate that. But I still feel there is much more to it. It is strange, a customer will travel 10 miles out of their way spending gas in what was a high priced market and soon to return to, to buy the same item at a store that can be found in their own area for maybe a buck or two more. Between wear and tear on the vehicle, time factor, traffic, and so on, wouldn't it be cheaper to shop locally? Especially if all you are saving(?) is a "couple" dollars? If you're on a major expedition, that is one thing. But for one item? If it is a major savings to out weigh the other factors, go for it. But most I've heard of, do it for only a few things to save $1 or more. That is ridiculous.

So what happens when all the "local" shops are gone, the bigger stores and malls are "bankrupt"... then what? NO JOBS. For anyone. No income to support the few that may remain.

Yes, I agree, the bigger stores with their fairy tale promises, do kill local economies. I've seen several towns in a 20 mile area here go that way. If it weren't for a small University here and there and a couple factories struggling to stay alive, this whole region would be finished. Our local politicians and I'm not talking Councilmembers, but rather State Representatives and such, all talk a good game, but can't walk the walk when it comes to DOING. I have yet to see one of them come through to stimulate the economy. The local councils and so on, are batting their brains out to figure how to deal with financial crisis. Tax increases are needed to provide basic services, maintain roads and such, but where? You can't squeeze blood from a rock as they say.

Competition? You can't possibly expect smaller stores to compete with stores that offer items dirt cheap, then either raise them in the end or die in Bankruptcy. As for the bigger stores, as above Hills and Ames, one was going

down, the other bought them out, now they too are headed out. So who won? NO ONE. Even the property owners where those stores once occupied are now making nothing on their investment.

There was a guy who had a lot of cash... He bought (believe it or not) about 85 - 95 % of the buildings in a local town that once thrived. He made promises of making it go better. 20 years later, the town is all but dead. It is merely waiting to get the last rites. The man? Reneged on paying taxes, is now being sued for them and meanwhile the buildings are in such sad shape, they are better off being bull dozed. No one in their right mind would buy them to try to occupy them.

PEOPLE and COMPANIES with money make big plans to make things better. But as we have all seen the fairy tale does come to an end sooner or later. And, as we also know, many people get hurt. Poor management? Maybe. Greed? Most likely. It's more of biting off more than you can chew and CHOKING ON IT.

Grants are out there to be had to try to help the towns being torn apart economically, but they aren't just "handed" over. There is a little red tape to go through. Our State and Federal representatives need to get off their lazy asses and start thinking of the US instead of their own pockets and the foreigners who could give a shit less about us who support them. The WELFARE we give to those who burn our flag, shout death to us and so on, could be better spent HERE. Taking care of our seniors, and so on. SCREW THEM PEOPLE who don't care for US. It is a shame, OUR tax dollars, go into a system to keep this country alive, the seniors who have paid out their ass for years, now sit with little if any help to keep them going. Tax relief?????? Tax breaks???? Yeah I see a good way.. STOP ALL FOREIGN
AIDE..... Stimulate OUR economy, screw AFGHANISTAN and all the rest who hate us.

You talk about people on welfare here.... Think about it... they get medical, food stamps, etc. Yes, it is our tax dollars... BUT it is spent HERE. When we send billions to other countries, we don't get shit back....

Let's start doing with these countries like WE are treated. You want a loan? Fine, give us the deed to your property. Put up collateral. Why should they be "handed" billions of OUR tax dollars. When you go to a bank, nine times out of ten you have to prove you don't need the money or have to have something to give them for collateral. OR pay it back with interest - sometimes high. Why should it be any different with other countries? This country is owed
TRILLIONS from others who in the past have promised to repay. Yet this country has yet to see much come back... WE the US need to wake up. I'm not picking on parties here. ALL of them are selling us out. ALL of them.

This crap of we need them for allies.. Yeah? Do we? We usually end up having "our" troops killed saving THEIR asses. WE were attacked..... Blow the bastards off the face of the earth and be done with it. No, now we have to hear we're treating these scum bags that were taken prisoner - too harsh. Give me a break. They don't deserve a meal paid by my tax dollars. Not when they intended me or my fellow citizens harm. We hear almost daily, Saudi

Arabia doesn't want us there, this one doesn't want us there, that one doesn't. OK! SCREW THEM. Stay home in the US. Keep our troops here too. Let them fight their own battles, "then" we'll mop up.

Let's worry about U.S. Get our economy on the road, forget the rest. You can't help others if you can't help yourself. These high level politicians haven't learned that philosophy except when it comes to filling their own pockets and selling U.S. short. You know, if YOU don't do your job, you get fired. It's time we fire all of them and hire some new. IF they don't work out, fire them too.

With all our technology, you mean we can't figure out a way to run this country with out having to suck up to those other countries? There "has" to be a way.....
We are the addicts, they are the suppliers. So long as that chain exists, we're in trouble. Maybe we should BID out for the oil just like most businesses are required to do to get the best possible price and service.

I'm through preaching.

I can't believe that Voobnerd is still up to his trolling. It's been almost 2 years that he's been here on this newsgroup on his podium pounding his fists with false accusations, insults, and old fashioned grand standing.

I'll never forget the time where he tried to get people to believe that he was the equivalent of a CIA operative for the FCC. Course the other good one that he posted was when he stated something to the effect that 'God told him to troll the newsgroup'...

But hey, go easy on the whacko... He's fun to watch! Kindof like the fly trying to go through the glass on the window. After a while it gets annoying, but eventually the cat will kill it.

Didn't take ya long to appoint yourselves (plural for a reason) "Captain o' the thought police" did it Voob?

It's a good thing Voobner isn't an environmental whacko folks, otherwise he'd be out to stop the spurious emissions of Methane gas that occur shortly after people exercise their "right" to eat beans.

See below for comments interspersed.

"Aaron H. Voobner" <voobner@yahoo.com> wrote in message news:fbc7a2.0201161805.eea2900@posting.google.com...

Voob.... All they are doing is selling Electronics gear. It's the use of the item in a particular fashion that's illegal. If you would have the US courts interperet the laws the same as you do the conseuqences would be astounding. Here are some examples of the outcome of interpretations applied to different laws.

1.) We'd have to outlaw cars because some people have committed "vehicular manslaughter".
2.) We'd have to outlaw axes because someone was an "Axe Murderer"
3.) Sharp pointy objects, such as tree brances (sticks), would have to be outlawed because you could "put an eye out."

You're confusing the ITEM / TOOL with the ACTION....

Damn liberals... They're taught to "feel with their heart" rather than to "think with their brain".

What a complete and utter dunce... Probably wears velcro sneakers just so he doesn't have to tax his brain on how to tie a knot. I'm sorry to hear about your pack o' hemmorhoids swelling up when someone mentions the word linear Voobner. I hope the prognosis that your neurosurgeon gave you was favorable and hope that the condition can be treated. I think I speak for all of us here when I say, "Get well soon."

3239. I am looking For Manual for PAULDON PD-ATV-50 70 CM

Newsgroup: rec.radio.cb
Date: 2002-01-24 19:44:55 UTC

And the sick bastards deserve everything they get, and probably more. Anyone
who would hurt or molest an innocent child deserves punishment. There was a

case last year in my home town a guy who had a body shop was arrested when it was discovered he was molesting, and taking pictures of a teenage girl who was helping take care of his office paperwork.

Hey all,

So I ordered a Uniden 520XL from bills2way. Since I will be moving this radio between 2 cars, I need to make a quick connect for the power and antenna. Each car has an antenna on it.
What gauge wire should I use for the power lead? I will be running it straight to the battery. Also what size fuse should I get?
Thanks!

Joe

3258. CB Clubs or Groups in the Lower Bucks or Philly, Pa area?

Newsgroup: rec.radio.cb
Date: 2002-01-24 22:58:19 UTC
From: Patty <fleamarketeer@mindspring.com>
Message-ID: <a2q37l$uu8$1@slb2.atl.mindspring.net>
Source record: 113743

Anybody out There?

I'm relatively new to this area and was wondering if there are any local CB Clubs or Groups in the Lower Bucks or Philly, Pa area?

I have not had the time yet to search around on the channels to make many contacts and thought maybe someone on here might be able to steer me in the right direction, I know in several other areas of the country there are CB' ers that get together at coffee shops, donut shops etc, for informal meetings and of course hang on a particular channel, I'm looking to meet new folks in this area and hopefully I will soon have more time to hang out on the band and make some new friends around here.

Thanks, 73's & 88"s

"Peppermint Patty"

3259. Using car speakers for external speaker?

Newsgroup: rec.radio.cb

Hey all,

New to CB....

Just wondering if it is possible to use your car speakers as an external speaker? So you can listen to music and then if someone broadcasts, it will interrupt and you can hear it - kind of like a PA system.

Thanks,

Joe

I absolutely agree with Kieth. The 102" whip is the best CB antenna that
has ever been produced. As for the mount I have used ball mounts on all of
my vehicles. They also add value to the vehicle just as long as you sell
the truck with a radio installed. Bill KF6WXJ

Since this site offers "10 meter amps" and "10 meter radios" I assume
it is meant to draw licensed hams. I forwarded the url the ARRL. Maybe
they can help you reach more hams.

3269. Re: Using car speakers for external speaker?

Newsgroup: rec.radio.cb
Date: 2002-01-25 01:28:17 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3c50b79c@news.planetc.com>
Source record: 113603

ONLY a special kind of CB can do this--I sold one that did TODAY--my last Cobra 70LTD that has a jack to hook up a relay box for it, so it can switch the speakers from the stereo to the CB. I have no more left, but I have AM/FM/CB/ 8 track Motorola's left that have a switch on the back that when the CB cuts in, you can hear BOTH or just the CB. E mail me @ truth@planetc.com for the price. Other than that, you can't hook them both up that you have unless you switch the speaker from one unit to the other--you can't play both, otherwise you will blow your stereo & maybe your CB.

Jeez, it would be horrible to get TVI'd by a CB keyclown right in the
middle of watching the game.

Yeah ok, Riddle me this boyblunder why do you care how many screen names I have had? I like your attempt at sounding more illiterate than you are makes your post that much more credible funny part is you are crying about me yet your a google thru aol poster for all we know you are voobner. If it makes you feel better by calling me voobner knock your dick off. I am anyone you want me to be besides there ain't a god damn thing you can do about it.

Oh you called me pussy boy that really hurts please stop it my sides are hurting. Are you gonna give me an electronic ass whoopin LOL hahahahaha

You are too funny please stop it ...

YOU tell them LOU ! Also ad the Deut. 28 factor because of sin, and you see that 2 Chron.7:14 IS the only answer! The way I see things, is I always WONDER how GOD wants us to live. There are truths in the Bible--he says we should be under our OWN fig tree (everyone in business for themselves (Family Businesses). No corporations, no Unions. They've been around in numbers since the late 1800's mainly. They are creatures of the state (the state creates them) Hale vs. Henkle, 1905. They are all violations of God's law. So they are bound to fail. On the other hand, individual & Family businesses, under God, the sky is the limit. The MAIN problem is the MONEY SUPPLY being created out of thin air by the Federal Reserve Banks and member banks. All Unconstitutional. WE was warned about this by The Founding Fathers. AThey and the international "controllers" are the ones who make and cause depressions, recessions, inflations, and so on. IF enough of us tell Congress to get back ahold of the currency instead of the foreign corporation Federal Reserve, we will be in a lot better shape!
Dave!!!!!!!!!!!!!!!!!!!!!!!!

Hey, that sounds like a good idea. Of course I wonder why he's pitching
his site on this NG, where I assume most of the readers here would be
more interested in low power, 11 meter rigs where one can transmit
without the required licensing...hmmm...maybe I'm missing something.
Perhaps, he submitted it to the wrong NG, maybe he really ment for his
advert to be in rec.radio.amateur.equipment.

Ah well, whatcha gonna do?

That is why Tollfree has never heard PINHEAD on any channel and NEVER on channel 6. Nor has anyone else on this group. PINHEAD is a MUD DUCK! He is a TROLL and just tries to annoy everyone on this group. I saw someone ask PINHEAD
what would it take to make him stay in the bushes. I know quite a few on this
group that wouldn't mind having PINHEAD NEVER COME BACK TO THIS GROUP as the best Christmas gift ever.
Hey PINHEAD would you consider leaving this group? Or maybe just toning it down?

Because I think that you showfine and pinhead are stupid.
Let's get real here, NOBODY and I mena NOBODY really responds to pinhead.
Why? Nobody likes him and really doesn't want to converse with him. You can
call me icecold or anyone you like but the fact remains,
Nobody likes you pinhead.
I for one wish you would go away and just because there are many who
dislike what you are doesn't make us icecold, shit he might like you more
than me.
Enough said on the topic I will also put you in the garbage. All of your
aliases.

You need a circuit called a VOX (Voice Operated Relay) that hooks to
the external speaker jack of your CB. It can switch your audio lines
whenever the CB breaks squelch.

conversation.

"How'd you die? The first blonde asked the second. "I froze to death," says the second. "That's awful" says the first blonde. "How does it feel to freeze to death?" "It's very uncomfortable at first," says the second blonde. "You get the shakes, and you get pains in all your fingers and toes. But eventually, it's a very calm way to go. You get numb and you kind of drift off, as if you're sleeping". How about you, how did you die?" asked the second blonde"I had a heart attack," says the first blonde. "You see I knew my husband was cheating on me, so one day I showed up at home unexpectedly. I ran up to the bedroom, and found him alone watching TV. I ran to the basement, but no one was hiding there either. I ran to the second floor, but no one was hiding there either. I ran as fast as I could to the attic, and just as I got there, I had a massive heart attack and died. The second blonde shakes her head. "What a pity- if you had only lookedin the freezer, we'd both still be alive.

Gorgo,
I can't remember the URL, (I'm sure someone will
have it), but as 'Sparky' said, thre are devices that
will switch between sources (radio or CB) going to the
speaker system. Didn't mean to make it mysterious,
just couldn't remember the URL...

Source record: 113623

well dave ,you asked for it...here comes economics 101...first,wall mart,since you like to portray this company as the great evil in the world....lets just look at this company. first,there are over 4000 walmart stores. they did 220 billion dollars of sales last year.think how much they pay in taxes, taxes that fill the treasury and make this country stronger. think about all the people who have jobs and paychecks because of wal mart. people who have money to spend in other "family owned" businesses. each wall mart store employs a minimum of 100 employees. 100 x 4000 = 400,000 employees. 400,000 people who have jobs because of walmart.400,000 people who also pay taxes.lets look at all the products that walmart retails. many are made in the good old U.S.A. so lets see,4000 retail outlets,that all sell the goods and services that are produced by other "american-family or corporate owned businesses" ....businesses that also have employees with families......businesses that produce every product imaginable....every thing. lets look at why walmart is so big. do you honestly think they are big because of anything the government did?? they are "big" because they offer great products,at great prices,and damn near everything you could look for ...all in one location.....without having to drive all over town to get what you want. WALMART IS BIG BECAUSE PEOPLE BUY THEIR PRODUCTS. how long do you think they would survive if nobody was buying????? not very long. so dave,walmart does alot of good by procuring the goods and services of other companies,supporting their enterprises,and employees,as well as the hundreds of thousands of people they employ themselves. try to look past the end of your nose dave,stop being so short sighted.its a big world out there. if you cant compete,get into another line where you can be competitive.be creative,stop blaming everyone else for your failures.
you think sam walton got to where he was by whining and complaining about somebody elses company??? he got off his ass,and built a hell of a company,with a hell of a great reputation with consumers!!! thats how you win in business dave.....offer a great service,at a reasonable price...and "they will come" as you can clearly see,walmart has done much for this country and its people,because of jobs,taxes,and the millions of other companies it supports by virtue of the products it retails.(you didnt think walmart produces what it sells did you) so dave...where is the evil??
its one americans dream that came true,because of a great land of opportunity. elpasogunslinger

Thats very interesting.

From: http://frwebgate4.access.gpo.gov/cgi-
bin/waisgate.cgi?WAISdocID=9456374106+5+0+0&WAISaction=retrieve

"Sec. 2.815 External radio frequency power amplifiers.

(a) As used in this part, an external radio frequency power
amplifier is any device which, (1) when used in conjunction with a radio
transmitter as a signal source is capable of amplification of that
signal, and (2) is not an integral part of a radio transmitter as
manufactured.
(b) After April 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including advertising for sale or
lease), or import, ship, or distribute for the purpose of selling or
leasing or offering for sale or lease, any external radio frequency
power amplifier or amplifier kit capable of operation on any frequency
or frequencies between 24 and 35 MHz.

Note: For purposes of this part, the amplifier will be deemed
incapable of operation between 24 and 35 MHz if:
(1) The amplifier has no more than 6 decibels of gain between 24 and
26 MHz and between 28 and 35 MHz. (This gain is determined by the ratio
of the input RF driving signal (mean power measurement) to the mean RF
output power of the amplifier.); and
(2) The amplifier exhibits no amplification (0 decibels of gain)
between 26 and 28 MHz."

Correct me if I'm wrong, but I thought CB freqs were between 24 and 35
mhz?

hmmmmm......

Thank you for the reply.

I thought VOX was only used on mics. Hmmm...have you actually done this with your rig? Does it work well? Will the VOX bring power down to line level so I can run the audio through the audio amplifier in my system? Do you know of any manufacturers that make this for the consumer?

Sorry for so many questions, this really has sparked my interest.

MFJ 1701 will do what you want with up to 6 radios, but, as Sparky points out, one radio at a time, ie: all others must be off when using any individual radio.

An outfit named "Euro CB" makes a unit that you can hook two radios to one antenna and handles the switching. You can have both on while using one, or so they say. It's Model # AS-100.

Anybody have any experience using this unit? I am going to look at one tomorrow (heh, today) and have been told it's cherry. Great price if true, $250.00. Actually, the microphone that comes with the radio is really what's peaked my interest. It's a "Heil".

Jeff

Source record: 113644

Jeff,
Doesn't sound like a bad price is what's said about it is
true,
I wouldn't cll it a 'good' price, but not totally out of reason.
A Heil is a good microphone, depending on which one it is. If
it's
an 'HC-4', I'd pass on it. The 'HC-5's are good, though. The
'4's
sound like you have a thumb up your nose...

Pretty good radios.

I seem to recall that they all have a speech compressor built in. They
also have FSK. Another nice feature is the tunable IF.

Sure, but if you want to transmit with one of them you have to
disconnect the other four.

I have done it with a few installations. There are different ways of
doing it. The best way is to switch line-level audio, but you need to
attenuate the external speaker line since that isn't line-level.
Alternatively, you could switch out the speakers if your audio amp
doesn't mind running unloaded (not usually a good idea).

Yes and no. Yes it will work so long as everything is done as expected.
But a lot, if not all, of them short the unused positions which can be
just a bit disasterous under some conditions.

We are assuming that you plan on using them one at a time.

>Thanks!
>
>Joe

Well, the quick answer regarding the wiring is to use the
largest guage you can find. For a CB, which shouldn't draw any more
than 3 or 5 amps of power, 18 guage wire would probably suffice,
although I'd probably go for 14 guage just to be anally retentive
about it. As for fusing, use the fuse included in the power leads of
the radio, and at the battery end of the radio, add another, heavier
(up to the power handling capacity of the wire, 10, 15, 20 amp -
depends on your choice of wire) quick-acting fuse.
I can almost hear the howls of protest now at the fusing
advice. Here's my explanation of why to do it this way. The smaller
capacity fuse will protect the radio, it will blow if the radio starts
to overdraw the circuit. Make sure that you keep this original fuse
on the DASHBOARD side of the wire. The heavier fuse at the battery
end of the wire will protect your car. It will blow if the insulation
on the wire gets chafed and grounds out to the car body. Depending on
which fuse might blow, it will tell you where to start looking for
trouble.
To make your installation even better protected, fuse the
ground lead as well, fuse it on the DASHBOARD side of the installation
and use a fuse that is slightly larger than the fuse included with the
radio. This will protect you if your ground wire starts to develop a
short to ground.

And maybe, just maybe those CB radios for sale on there would be of interest
to the hams in rec.radio.amateur.equipment? Doubt it... Why does a site
have to be specifically touted to either hams or CBers? Why can't they sell
BOTH types of equipment, and advertise in either place? Because you people
are closed minded idiots just looking to start shit...

please do not use 570/580. it is the qrg of the American Eskimo Dx Group and the Knight Patrol Dx Group and will cause alot of trouble on the band. you will have better success on 27.500 where psk activity is expected.

Umm... Perhaps I missed something here? How could a "ground" wire shorting to "ground" be a problem? The negative wire, even if it gets chaffed, would not make a bit of difference. The wire can't "short" to ground, because it is already at ground... The only difference it would make is that there would now be more than one path to reach the battery, possibly adding to, or creating, noise problems....

The only time this would be a problem is in a positive-ground vehicle. How many of those do you know of? They are pretty rare...

Legal, shmeagle---as long as it's fun. IMHO guys who are so hung up
about the legalities of CBing, that they would start fistfights over
the legality aspects, need to find another hobby. And leave us
fun-loving sinners in peace.

While I don't consider myself a closed minded idiot, you do have a point.
I was under the impression that he was advertising the 10 meter equipment

to unlicensed individuals, in which case it wouldn't make sense to advertise in this NG. But, as you point out, he does appear to be selling typed CB's, so I do see your point of view.

As an SWL, I don't bother with audio quality too much, if you're into CB, SWL, or ham, you're going to get bursts of noise & hash no matter what... so don't waste your money on a fancy graphic equalizer. IMHO best rig to get is Cobra 148, the one with sideband. If you are lucky, you can find one built before '92, when they were still 5W instead of 4W. 148GTL is what I have, but the 148GTLS (with FM) is rarest of all---reportedly only 5 ever built.

Yes, when it comes to intentionally breakering FCC rules, you might
say I am "close minded".

Gorgo, I was being facetious. That "10 meter" gear being advertised on
the radio.biz site is not ham gear. It is junk they CALL ham gear to
try and "get around" the law.

You might CHECK the law for yourself. Some in here will try and tell
you it's "legal" to sell CB amps.

What, uh, frequency do you plan to be using this radio on, Jeff? (Bear
in mind it is a sideband radio, it has NO roger beep, NO talkback, and
NO AM. Plus, there are no "channels" you have to TUNE it)

-Aaron-

I've already checked the law:

From:
http://frwebgate4.access.gpo.gov/cgibin/waisgate.cgi?WAISdocID=9456374106
+5+0+0&WAISaction=retrieve

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 2--FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES
AND REGULATIONS--Table of Contents

Subpart I--Marketing of Radio-frequency Devices

"Sec. 2.815 External radio frequency power amplifiers.

(a) As used in this part, an external radio frequency power
amplifier is any device which, (1) when used in conjunction with a radio
transmitter as a signal source is capable of amplification of that
signal, and (2) is not an integral part of a radio transmitter as
manufactured.
(b) After April 27, 1978, no person shall manufacture, sell or
lease, offer for sale or lease (including advertising for sale or
lease), or import, ship, or distribute for the purpose of selling or
leasing or offering for sale or lease, any external radio frequency
power amplifier or amplifier kit capable of operation on any frequency
or frequencies between 24 and 35 MHz.

Note: For purposes of this part, the amplifier will be deemed
incapable of operation between 24 and 35 MHz if:
(1) The amplifier has no more than 6 decibels of gain between 24 and

26 MHz and between 28 and 35 MHz. (This gain is determined by the ratio of the input RF driving signal (mean power measurement) to the mean RF output power of the amplifier.); and
(2) The amplifier exhibits no amplification (0 decibels of gain) between 26 and 28 MHz."

It appears that it is not legal to sell or lease, or even advertise (offer to sell or lease) an amplifier capable of operation on CB frequencies.

Since I don't consider myself qualified to evaluate the 10 meter equipment on his site, he does appear to be offering typed CB rigs in which case it is appropriate to advertise on this NG. Keep in mind I have no opinion on his actual motivations (it may be the case that there are individuals here that use equipment that they are not licensed to use and he may be directing his 10 meter equipment towards them, since I'm not a mind reader I think it would be inappropriate of me to speculate on this).

news:20020121224525.02055.00002807@mb-ct.aol.com...
> wish mine did....

HUH??????????? Tim, That's not a good thing. It means that RF is getting into things and places where it can do mischief with important safety features of your car. I, too, have had strange things to happen around high-powered radio equipment; lights "modulating", windshield wipers wiping, windshield washer washing, and the speedometer registering 110 MPH every-time I keyed the mike. I had to use a compination of grounds, shunt capacitors, and coaxial chokes to cure it. Other symptoms included cruise control releasing, engine decreasing or in-creasing RPM-- or even choking down. "Most" of these symptoms can be alleviated, and it is advisable to do so. I wouldn't want my car to choke down while crossing a busy intersection!

While I'm at it, this reminds me of something that happened back in the late '70s--kind of an early "noise toy" wish, if you will. I was operating some early Motorola gear (tube type) that had some very long squelch tails unless you kept the squelch really tight. One of the VHF re-peaters I used also used early Motorola gear. The "tail" on the repeater time-out (when the mike was released was long as well so that, when you released the button, you got this long sort of SQUAAAAAAAWK, which was a little annoying to listen to. I was still single in those days and prone to "roam" around and take meals wherever I happened to be, so I found myself in the McDonald's lot one evening eating one of their "rubber" sandwiches (they TASTE like rubber to me!). An older Pontiac Bonneville pulled in right beside me. It hadn't been tuned up in years(?) because it was going "foomp-foomp-foomp-foomp-foomp" like it was hitting on 5 out of 8 cyls. Obviously this gent was a mechanic, because he got out and went inside, and his "dickies", the blue/blue shirt and pants combo were quite dirty. I noticed that he had 2 102" CB whips on the back bumper---I assume they were "cophased". I continued to eat my food, and I noticed, too, when the fellow returned, he seemed to be very interested in what was happening on my radio because he was listening intently to the activity. After a bit he got out

and introduced himself and said, "I sure wish you could make my 'reddio'
sound like 'at".
I began to explain the difference in audio clarity and fidelity of FM as
opposed to AM and the
differences between HF and VHF thinking that was what he wanted. Turns out
that wasn't what he was interested in! His next statement was the one that
got me giggling. "Naw," he said, "Ah wantcha tuh 'mek' mah reddio 'mek'
that 'ere squawkin' sound, ther'," Hit meks hit
sound 'o-fishull' like thu po-leece"! LOL! I told the guy that if I could
get that racket out of my
radio, I'd be HAPPY to 'give' it to him! He didn't care at all about the FM
clarity--he just wanted my "noise toy". ROTFLMAO!!

Great idea, except that fun-loving sinners trample on the freedoms of
other CBers as well as private citizens when they loot the frequency
allocations of other radio services and create unnecessary
interference with sparrow-cooker amplifiers.

It's not about legality WitchDoc, it's about social responsibility.
Look into it. It is a concept that is apparently foreign to you and
before you start "enforcing Karma" maybe you ought to brush up on it a
bit.

> in mind it is a sideband radio, it has NO roger beep, NO talkback, and
> NO AM. Plus, there are no "channels" you have to TUNE it)

Not that it's any of your business, but I don't believe I said anything
about using this radio, period. That being said, there is no rule or law
that states that I cannot use it to monitor any frequency I may want to
monitor, should I decide to do so.

If I can get it for a fair price, then sell it, perhaps I can make a little
money off it, you fool.

Also, for your information, I don't use echo, roger beeps, or talk-back.

I have, in the past, owned (and used) a radio that is type accepted by the
FCC that did have talk-back available. That would be a Galaxy DX 959.

I buy radios as cheaply as possible, clean 'em up, and then, usually, turn
around and sell 'em. Sometimes I keep them.

Wanna know what's on my bench right now?
That gets used?

1) Lafayette Telsat SSB 140 (no mods)

2) General Electric 3-5869A 40 channel (AM only). I have not been inside
this radio so I cannot say if it's been modded or not. It does key 4w and
shows 1.5 to 2 watts of swing on the average setting of my Autek

Knowing you, it's safe to say you'll make the assumption that it's been
modified without ever having taken a look at it.

You still suck, Aaron, or whatever your real name is.

I'm so glad I am not you. :-)

Jeff

> what 'filtration' are you talking about, Toll?

The receivers is what I am talking about. The IF sections. If they don't
have enough filtration
(selectivity), then the trashy transmitters, local moron down the street,
what have you
easily tears up even the SSB receivers.

Try living a few blocks from a truck stop and operating SSB on a base.. See
where it gets you.

If you combine all of the points I raised, instead of nitpicking them apart
one
by one, then yes, I am correct.

Of course, your books don't say that, so ....

>
> >B. Most people on CB are using wider radio transmistters, due to
defeating
> >or cranking up ALC.
>
> "wider radio transmistters"? LOL! Snipping the limiters just defeats
> any 'filtration';

Your statement is that defeating the audio limiter (AMC / ALC) doesn't make
the transmitted signal broader?

It sure does on my spectrum analyzer. Yet another argumentative post from Sparky.

and contrary to the opinion of a few in this
> newsgroup, most CB radios do not have their limiters disabled.

Maybe not where you are, but having been involved in some way or form in the CB industry for the last 10 years, I can attest that yes, their are QUITE
a lot of radios with improperly adjusted transmitters in existance, and daily use.

>
> >C. Quite a few people on CB insist of using "half channels" or 5Kc drops to
> >escape the rest.
>
> What does that have to do with the bandwidth of SSB, except that
> illegal operators are more prone to interfere with sidebanders?

It has nothing do do with it, but all of a sudden your 5 KCs of separation between
channels just disappeared.

See, some of us don't live in a book, and we actually DO take into account real life, actual
on the air time. You might try it, go outside of your little clique of friends, and see what the
rest of the world and their CB radios are like...

>
> >Because of the 3 reasons listed above, and others, it makes it a little hard
> >to use upper and lower ssb on a frequency.
>
> Way off base again, Toll.

Really? Then why is it in my local area, their are no CBers operating SSB, sans
a handful? And most of the people here have SSB capable radios?

And why is it when I throw a modified Cobra 29 on my station, it tears up the
gentleman about 2 blocks away on all 40 channels, on his SSB radio?

But when I have the Kenwood (non tweaked and peaked), the problem goes away for him?

Seems to me that real life is a little different than what you keep professing.

In my area you can hear people on 35-40
> cooperating quite well when operating on SSB.

During periods of extreme skip?

Your taking into account the stations that we deal with from all over, or just "your little area":.

Theory Vs. Actualities... The battle rages on.

The only way it works is
> if everyone uses the same standards with their radios: Same freqs,
> same bandwidth, etc. The only people that have any problems are those
> with the 5kHz slide, snipped limiters, and radios that are detuned
> because someone tried to tweak them for a couple extra watts.

Nah, its not usually them that have the problems, as they usually stick to the standard
40 AM, or go below 40. Its the people trying to use their SSB radios 2 miles away
that have the problems with them..

Not the other way around. Nice try, though.

>
> Education and experience Vs. keyclown mythology.

Actually, if your experience is so great, why are you wrong so much?

When driven to saturation, the BE junction of a transistor will be on just as much, if not more than off.

Hence, the transistor is no longer conducting over less than 50 percent of the input cycle.

Been discussed, proven, and agreed upon before.

Source record: 113568

TWO THOUSAND ONE, NINE ELEVEN

Two thousand one, nine eleven
Five thousand plus arrive in heaven
As they pass through the gate,
Thousands more appear in wait
A bearded man with stovepipe hat
Steps forward saying, "Lets sit, lets chat"

They settle down in seats of clouds
A man named Martin shouts out proud
"I have a dream!" and once he did
The Newcomer said, "Your dream still lives."

Groups of soldiers in blue and gray
Others in khaki, and green then say
"We're from Bull Run, Yorktown, the Maine"
The Newcomer said, "You died not in vain."

From a man on sticks one could hear
"The only thing we have to fear.
The Newcomer said, "We know the rest,
trust us sir, we've passed that test."

"Courage doesn't hide in caves
You can't bury freedom, in a grave,"
The Newcomers had heard this voice before
A distinct Yankees twang from Hyannisport shores

A silence fell within the mist
Somehow the Newcomer knew that this
Meant time had come for her to say
What was in the hearts of the five thousand plus that day

"Back on Earth, we wrote reports,
Watched our children play in sports
Worked our gardens, sang our songs
Went to church and clipped coupons
We smiled, we laughed, we cried, we fought
Unlike you, great we're not"

The tall man in the stovepipe hat
Stood and said, "don't talk like that!
Look at your country, look and see
You died for freedom, just like me"

Then, before them all appeared a scene
Of rubbled streets and twisted beams
Death, destruction, smoke and dust
And people working just 'cause they must

Hauling ash, lifting stones,
Knee deep in hell, but not alone
"Look! Blackman, Whiteman, Brownman, Yellowman
Side by side helping their fellow man!"

So said Martin, as he watched the scene
"Even from nightmares, can be born a dream."

Down below three firemen raised
The colors high into ashen haze
The soldiers above had seen it before
On Iwo Jima back in '44

The man on sticks studied everything closely
Then shared his perceptions on what he saw mostly
"I see pain, I see tears,
I see sorrow - but I don't see fear."

"You left behind husbands and wives
Daughters and sons and so many lives
are suffering now because of this wrong
But look very closely. You're not really gone.

All of those people, even those who've never met you
All of their lives, they'll never forget you
Don't you see what has happened?
Don't you see what you've done?
You've brought them together, together as one.

With that the man in the stovepipe hat said
"Take my hand," and from there he led
five thousand plus heroes, Newcomers to heaven
On this day, two thousand one, nine eleven

You have a point, but it only goes so far. The SSB receivers use the
same filters for transmit, and are -very- selective.

>Try living a few blocks from a truck stop and operating SSB on a base.. See
>where it gets you.

That's because of the splatter generated by snipped limiters, power
mics, noise-toys and crappy amps. Splatter will intrude on any
receiver regardless of selectivity.

>If you combine all of the points I raised, instead of nitpicking them apart
>one
>by one, then yes, I am correct.

The points you raise don't add up. None of them are valid.

>Of course, your books don't say that, so ....

You seem to have a disdain for formal education. Do you even know
-why- books are written? They disseminate generally accepted knowledge
on a given topic. I think they are a pretty neat invention, don't you?

>> >B. Most people on CB are using wider radio transmistters, due to
>defeating
>> >or cranking up ALC.
>>
>> "wider radio transmistters"? LOL! Snipping the limiters just defeats
>> any 'filtration';
>
>
>Your statement is that defeating the audio limiter (AMC / ALC) doesn't make
>the transmitted signal broader?

No, of course it does! But like I said before, it doesn't matter how
much filtering you have, if someone is splattering you will hear it,
AM or SSB. That certainly isn't a limitation of SSB, which is what you
were trying to say.

>It sure does on my spectrum analyzer. Yet another argumentative post from
>Sparky.

Yet another attempt by Toll to spin the subject.

>and contrary to the opinion of a few in this
>> newsgroup, most CB radios do not have their limiters disabled.

Which does not contradict my statement. Believe me, I hear crappy
radios all the time. But most of the radios I have seen and worked on
(since the late 70's) were not modified in any way.

>> >C. Quite a few people on CB insist of using "half channels" or 5Kc drops

>> illegal operators are more prone to interfere with sidebanders?
>
>
>It has nothing do do with it, but all of a sudden your 5 KCs of separation
>between
>channels just disappeared.

I said channels as in 1 through 40, not keyclown freqs. If someone
operates outside of the standards for CB, they are bound to cause
interference. When that happens, just change the channel. It ain't
that difficult. BTW, the channels are spaced 10 - 20kHz apart.

>See, some of us don't live in a book, and we actually DO take into account
>real life, actual
>on the air time. You might try it, go outside of your little clique of
>friends, and see what the
>rest of the world and their CB radios are like...

Lose the attitude, Toll. I have been living in the 'real world' a lot
longer than you have. I still have my labelmaker-printed CB callsign
stuck on a couple radios.

>> >Because of the 3 reasons listed above, and others, it makes it a little
>hard
>> >to use upper and lower ssb on a frequency.
>>
>> Way off base again, Toll.
>
>
>

>Really? Then why is it in my local area, their are no CBers operating SSB,
>sans
>a handful? And most of the people here have SSB capable radios?

Most have SSB radios? Really? I really doubt that. Do you walk the
streets at night looking in people's vehicles to see if they have an
SSB capable CB? You are making shit up again, Toll.

>And why is it when I throw a modified Cobra 29 on my station, it tears up
>the
>gentleman about 2 blocks away on all 40 channels, on his SSB radio?

Duh! That isn't -his- fault, is it?

>But when I have the Kenwood (non tweaked and peaked), the problem goes away
>for him?
>
>Seems to me that real life is a little different than what you keep
>professing.

Now I'm not too sure what your point is, Toll. Are you saying that SSB
is becoming useless because of so many idiots like yourself with
crappy radios and splatterboxes? I'll agree to that.

> In my area you can hear people on 35-40
>> cooperating quite well when operating on SSB.
>
>
>During periods of extreme skip?

Even more so during skip-times.

>Your taking into account the stations that we deal with from all over, or
>just "your little area":.
>
>Theory Vs. Actualities... The battle rages on.

The battle is your's, not mine. You seem to be characterizing all
CBers based on your observations within -your- little keyclown clique.
Most have SSB? LOL!

>The only way it works is
>> if everyone uses the same standards with their radios: Same freqs,

Jeff,
How do you like the Autek meter?
I just bought one a couple of weeks ago and i like it so far. It will
probably take me a while to get used to the attenuation speed of the peak
reading side of it though.

If you run it inside the mast, you don't have to worry much. You can
coil it around the mast, but do it at the base of the antenna, not the
base of the mast.

>
> > and that it was OK to wrap around the

lol.

I won't argue any longer, but the facts are the facts.

You told him it was OK to coil the coax around the antenna. You mentioned
NOTHING
about having to change the amount of turns.

Process of deduction (remember, not everyone here is an enginner, some of us
go
by real life experiences, and not live and die by the textbook) is that the
number
of turns was OK, but he was putting them in the wrong location.

As well as the fact that you didn't DISPUTE the comment until way later.

>
> >Admit it when your wrong, its becoming something of the norm.
>

Im saying if you drive a transistor into or above saturation, it will change
it's
operating point due to the rectification of the BE junction.

Or....

http://www-personal.monash.edu.au/~kaminski/ele2262/part-2/part-2b.htm

After all, you would know that all modern RF transistors have emitter
ballast resistors built in.

They teach that in textbooks and some datasheets (although it is pretty much
taken for granted now).

>
> >Been discussed, proven, and agreed upon before.
>
> Where and by whom? The prof? Eitner? ROTFLMFAO!!!

Others, as well. I have provided a link that states that a comon emitter
amplifier can be self biased with the
input waveform.. Something you hinted was impossible.

Next.

If the purpose of buying the 520se is to make money on it, I'd suggest taking a harder look at the pricing. $250 is about the average to above average price for that old rig, and if you have to retube it, well, there goes any profits. Tune it into a dummy load to assure 100 watts. You won't make anything on it at any rate unless you find a sucker to buy it.

Use a cell phone switch.

Connect its "cell phone" leads to the power leads going to the CB radio.

The upside to this method is, whenever the power draw increases, it will
switch for you.... TX and RX.

Best I've had. That's probably not saying all that much but I really like
it. I've had it for about a year and a half. When Eitner first made mention
of them I went to the website and scoped 'em out and liked what I saw.

> I just bought one a couple of weeks ago and i like it so far. It will

Exactly.

I really like it. Have you checked it against something you know to be
accurate? Mine seems to be right on, as far as I can tell.

3408. Classic anti- WALLY spewage!!!!!!!!!!!!!

Newsgroup: rec.radio.cb
Date: 2002-01-26 02:42:29 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3c521af9@news.planetc.com>
Source record: 113595

OH right Kenny--MY response to what you said below each point, double spaced to see it better.
Caution: You may see what REAL America is all about IF you read further!!!!!! (YOU asked for it)! Can anyone give me an A-MEN (a BIG 10-4) ?
Dave!!!!!!!!!!!!!!!!!

"Kenneth Vaughan" <kenneth.vaughan@worldnet.att.net> wrote in message news:o7548.1224$Ab1.70471@bgtnsc04-news.ops.worldnet.att.net...
> well dave ,you asked for it...here comes economics 101...first,wall
> mart,since you like to portray this company as the great evil in the

IT IS, and you college GEEKS think that your "new economy" of Govt. controlled socialism & commyism is just wonderful, just read on to see THE EVILS of what WALLY has done!!!!! I don't "like" to portray them is EVIL--THEY ARE EVIL!

> world....lets just look at this company. first,there are over 4000 walmart

JUST THINK of HOW MANY FAMILY BUSINESSES and 1 man operations that they put out of business! WHY do you defend them anyway? IS yo related to Walton Mountain?

> stores. they did 220 billion dollars of sales last year.think how much they
> pay in taxes, taxes that fill the treasury and make this country stronger.

Money in the treasury, which "creates" it out of thin air, does NOT make the country "stronger." Everyone working in small business, doing their OWN thing, makes the country stronger. You commies always want CENTRALIZED everything. Just think WHO gets all the $$$ wally makes, instead of ALL US little people! They are richer, and we are poorer. I guess that's what you commies want, no middle class!

> think about all the people who have jobs and paychecks because of wal mart.

YOU just think of ALL the people they put out of business, and it will be a GREATER number than the corporaqte SLAVES that Wally has!

> people who have money to spend in other "family owned" businesses. each

They don't get paid enough to go to a Family run business, IF they can find one! They get MINIMUM WAGE !

wall
> mart store employs a minimum of 100 employees. 100 x 4000 = 400,000
> employees. 400,000 people who have jobs because of walmart.400,000 people

The REAL question is: what did they do before Wally? Made MORE $$$
probably, and had pride in what they did, because it was THEIRS, and not the
STINKIN' corporations!

> who also pay taxes.lets look at all the products that walmart retails.
many
> are made in the good old U.S.A. so lets

YEAH RIGHT! A few compared to the ATRASH that it imports from OUR
ENEMY, RED CHINA ! They should be busted for trading with the Enemy act!

see,4000 retail outlets,that all
> sell the goods and services that are produced by other "american-family or
> corporate owned businesses" ....businesses that also have employees with

I DOUBT if Wally even has 1 family business item in the store! IT
IS ALL CORPORATE !!!!!!!!!

> families......businesses that produce every product imaginable....every
> thing. lets look at why walmart is so big. do you honestly think they are
> big because of anything the government did??

YES THEY ARE. The towns and counties that have let wally in have
given them OODLES of things, even a traffic light to their enterance, when
the old wally store had none! Wally ordered the traffic light and the town
said "YES MASSAH." Corporations get a LOT of benefits that us lower peons
on the todum pole can't even see.

they are "big" because they
> offer great products,at great prices,and damn

They ARE COMMUNISTS because they have sold things at or LESS than
cost FOR ATHE PURPOSE OF forcing others out of business that sell the same
items in town.

near everything you could
look
> for ...all in one location.....without having to drive all over town to
get

YOU must work for them, is all I got to say!

> what you want. WALMART IS BIG BECAUSE PEOPLE BUY THEIR PRODUCTS. how long
do
> you think they would survive if nobody was buying????? not very long. so
> dave,walmart does alot of good by procuring

Wally does NO GOOD @ ALL, because of ALL the EVIL it has done.
Jesus said "Call NO man Good." Yet Wally and you their spokesperson has the
GAUL to say that they are and/or DO GOOD! Gov. Shunk from PA in the 1800's
said that Corporations have NO TROPHYS and that individuals have done
EVERYTHING to settle this wilderness of a country. I can snail mail you his
comments for 2 stamps if you really want to read something that will blow
your college brainwashed mind!

the goods and services of
other
> companies,supporting their enterprises,and employees,as well as the
hundreds
> of thousands of people they employ

ALl those people you mention live in RED CHINA!

themselves. try to look past the end
of
> your nose dave,stop being so short sighted.its a big world out there. if

I SEE VERY FAR, but since you have NEVER been out in the real world,
and just probably worked for corporations all your life, you have NO IDEA
how Wally has HURT AND DESTROYED MILLIONS in this country!

you
> cant compete,get into another line where you can be competitive.be

I CAN compete, taken a lot of sales from Wally, making just a few $$$
instead of what I should of made, just so Wally won't get the sale!

> creative,stop blaming everyone else for your failures.

I DO blame a tyrannical, UnConstitutional government for the
failures of EVERYONE who has lost fame & fortune because of these BIG
Corporations like Wally. I have NOT failed. I've been doing a great job
for over 22 years now, working on my own, despite a communist tax system, an
UnConstitutional government that has violated THE LAW by being out for the
good of the BIG BOYS, instead of US who they suppose to represent!

> you think sam walton got to where he was by whining and complaining about
> somebody elses company??? he got off his ass,and built a hell of a

Sammy got to the top by STEPPING on all to get there, just like your E
nron hero that killed himself today! They did NOT do it the Biblical way;
they did it the Babylonian way!

> company,with a hell of a great reputation with consumers!!! thats how you

I don't have or want "consumers." I Have CUSTOMERS. There IS a
difference!

> win in business dave.....offer a great service,at a reasonable price...and
> "they will come" as you can clearly

They will only come when they are forced to, because Wally put out of
business EVERYONE ELSE!!!!!!

see,walmart has done much for this
> country and its people,because of jobs,taxes,and the millions of other

Jobs Wally destroyed, taxes if UnConstitutional are unneccessary and
a heavy burden on the small enterprise
.
> companies it supports by virtue of the products it retails.(you didnt

think
> walmart produces what it sells did you) so dave...where is the evil??

I already explained it. The Greatest EVIL they have done is PUT OUT
OF Business individuals & Families, where people were FREE, and turned their
kids into CORPORATE SLAVES @ minimum wage, working for NOT themselves, under
God, but THE STATE (Hale vs. Henkle, 1905). THE STATE creates ALL
corporations; they are ARTIFICIAL PERSONS with "eternal life" until The Lord
ends them! Since the State created them, the state IS their master! They
are NO LONGER A FREE People!

> its one americans dream that came true,because of a great land of
> opportunity.

It was when SAM did it in the early 60's. But NOW IT CAN'T BE DONE
AGAIN! NO MORE HENRY FORDS, NO MORE EDISONS, because the communist economic
system we are in (Govt. and foreign banker controlled, I believe Andy
Jackson called them VIPERS) will SLAP YOU DOWN if you dare even THINK you
want to get up to a Bill Gates! Wally is 1000 times more guilty than Bill
Gates in anti-trust violations!!!!!!!!!!!!!!!!!!!!!
Dave!!!

greetings to all,

i'm looking to get a cb with a remotable face plate for an installation in a custom car. does anyone know of one, or have one?...are they made?

if not, i would like to find a "works in the mike" radio... (damn i used to have one, but gave it away to a kid that was just starting out in the hobby)..

thanks

Like others have already said, the ground wire shorting to ground really isn't a problem. It would have to short to something positive for it to smoke. I've also wondered about fusing the negative lead in general as a practice, because if it blows (and your fuse on the positive lead doesn't for some reason) your radio and amp would keep running as the current returns to ground through your coax shield. Not a problem for mag mounts I suppose. I usually just rely on the fuse(s) on the positive line, in theory it's enough. (yes, I know that people are going to jump on that last sentence).

Later
Ben

> is that the
>number
>of turns was OK, but he was putting them in the wrong location.

6 turns should work. So should 8 turns. And yes, just below the
antenna is a better place than the top of the mast.

>As well as the fact that you didn't DISPUTE the comment until way later.

I disputed nothing until you started nitpicking.

mopar,i have been using the heavy duty hazer for the last few months. its the 'bomb". its easy to install,comes with everything you need to get operational,and is quite frankly "the best thing since sliced bread". i cant recommend this unit enough.ive got mine hooked to an electric winch at the bottom of the tower,and can raise and lower my antenna in 30 seconds.. antenna adjustments are a snap.
also,i no longer need to use guy-wires around my tower.when i want to talk,i raise the antenna.after im through,i lower it in seconds.no need to worry about high winds any more. do your self a favor and get one!!!

3422. Cherokee AH-27F new mod?

Newsgroup: rec.radio.cb
Date: 2002-01-26 04:56:33 UTC
From: medic@bigfoot.com
Message-ID: <2e452ba7.0201252056.33827ed1@posting.google.com>
Source record: 113657

Howdy,

I just got a new AH-27F hand held and I'd like add all those other "bands".

My problem is that the insides of mine look nothing like the one listed on the bills2way site. The solder pads in mine are located in a verticle line along the right side of the LCD PC board. There are eight pairs of pads numbered 1-16. Shorting pad eight to it's neighbor produces no extra bands.

Anyone know what's up with this neat little radio?

Thanks

Matthew

3423. Where To Find Galaxy Service Manual

Newsgroup: rec.radio.cb

That's not how I read it. It's one unlicensed bootlegger (Tim) arguing
with another unlicensed bootlegger (1AG01 Andrea) about who has more
"right" to a frequency that neither one is authorized to use.

So in the freeband, a "gentleman's agreement" comprises "hundreds of
stations" forcing people off "their" frequencies?

Sounds more like anarchy, Tim. Too bad there's no one to complain to.
Since you choose not to live by any rules - you're not protected by
any either.

Here are 3 undisputed facts about "freebanding".

1) Freebanders steal frequencies
2) Freebanders operate outside the law
3) Freebanders hide their identities

Considering that freebanders are basically untrustworthy, a claim that
they "do not interfere with emergency comms" cannot be taken seriously
at all.

02c785.56561%40mygate.mailgate.org
--

So, let's show the links to Mr. "crying again":
From: <steelgangsta@msn.com>
User-Agent: Mailgate Web Server
posting-account=56561
Same e-mail, same user-agent, and same mailgate posting-account.

But, what isp was he using???
NNTP-Posting-Host: spider-tl024.proxy.aol.com
Injector-Info: posting-host=spider-tl024.proxy.aol.com
X-Trace: news.mailgate.org 1011039780 3826 152.163.207.184

AOL are clearly named as the NNTP-posting host, and as the "injector" posting
host, but just to be sure, let's look up the ip "152.163.207.184"...

Netname: AOL-BNET
Netblock: 152.163.0.0 - 152.163.255.255

America Online (NET-ANS-BNET8)
12100 Sunrise Valley Drive
Reston, VA 20191
US

Well, it all seems to point to an AOL connection, but, just to be real sure,
let's check the path (read in reverse, as first on list is my server)...
1. spider-tl024.proxy.aol.com!not-for-mail
2. mygate.mailgate.org!
3. news.mailgate.org!
4. news2.euro.net!
5. newsfeed.freenet.de!
6. t-online.de!
7. newsfeed00.sul.t-online.de!
8. diablo.theplanet.net!
9. news.theplanet.net!

Yep... it went from AOL, to Mailgate, then through germany, and to
my server (theplanet).

And there's more...

How about "Sal Diblasi"?

Just watch out for copyright laws, www files and images are still protected
by copyright.

Some sites will state that the images can be copied, but if there is no
mention of that, then assume it is copyright material. There are some sites
which offer free clipart, and some are dedicated radio clipart sites.
Try either a search on Google for "free clipart", or go to
http://www.321free.com/ and look under free clipart.

But some of his alter egos will... with aol ip numbers in the headers.

===
> > why do you feel the need to reply to me or to my posting IGNORE ME
===

Hahahahahahahahahaha... bonk.

Now that's funny. Not only does he keep changing his e-m in his header to by-pass filters, but then he changes his name, so you don't know it's him until you read it.

He knows he gets killfiled, his constant header changes prove that. It also proves his need for attention... the attention his mummy would never give him.

This chap has made more comebacks than Gary Glitter. But you can only burn so many bridges before a comeback is no longer possible... I doubt if Gary Glitter will ever make another comeback now.

A high school English teacher reminds her class of tomorrow's final exam.

"Now class, I won't tolerate any excuses for you not being there tomorrow. I might consider a nuclear attack or a serious personal injury or illness, or a death in your immediate family - but that's it, no other excuses whatsoever."

A smart-ass guy in the back of the room raises his hand and asks, "What would you say if tomorrow I said I was suffering from complete and utter sexual exhaustion?"

The entire class does its best to stifle their laughter and snickering. When silence is restored, the teacher smiles sympathetically at the student, shakes her head, and sweetly says, "Well, I guess you'd have to write the exam with your other hand."
Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

So leave him the hell alone already.

The best piece of advice you got on the 520 was to check the finals. Or in the alternative have a really good supplier of tubes. If you plan Antique Modulation, have a really good source for tubes.

No I did not write that, someone sent it to me and they themselves do not know who wrote it. But you are correct, I thought it was beautiful, especially having been to NYC and worked at ground zero, and having attended many memorial services for the men and women of the police,fire departments.

Looking for nice Mark III. Please Email ALLSTEEL77@AOL.COM

3459. Repair Midland 78-976

Newsgroup: rec.radio.cb
Date: 2002-01-26 16:05:57 UTC
From: Steve Knoblock <knoblock@NOSPAM.att.net>
Message-ID: <FtA48.3325$Ab1.215651@bgtnsc04-news.ops.worldnet.att.net>
Source record: 113694

I bought a Midland 78-976 SSB 40 CH CB made in 1977 just to have some fun with. It's in excellent condition, but is not working.

It powers up, the pilot lights come on.

When on SSB I can hear static, but no signal, not even on the channels operators are on (I have a small 40 CH and a short-wave to check).

When on AM I hear nothing but silence and a little hum.

Squelch appears to work, volume, RF gain moves the signal strength meter a little as I turn it up.

Keying down, the power meter does not move. I put my own SWR/PWR meter on it, and it stays at zero. So apparently, it's not transmitting either.

I have checked inside and there is no evidence of any burnt capacitors, traces, anything, very clean with little dust.

A clue might be that I can hear the hum change when I touch a knob in AM mode with the volume turned up. I do not know if that means there is a grounding problem or is typical.

I would appreciate any clue as to where I should start looking, testing. I only have a DVM and an old transistor checker, a little experience with electronic kits.

Thanks,

Steve

i've only been here about 1 month (NG), but i think this newsgroup is
"spicier" with a Voobner than without.

he/she makes some good points, the most salient being:

"Great idea, except that fun-loving sinners trample on the freedoms of
other CBers as well as private citizens when they loot the frequency
allocations of other radio services and create unnecessary
interference with sparrow-cooker amplifiers."

Voobner is definitely this NG's hangover-after-partying.

Brainbuster, I am glad you devoted that amount of time to me I feel honored really but you missed the part of one of my posts where I said that the account name and info was emailed to me and I was asked to use the account, now I don't know who has already used it and or how many people besides me. If you remember correctly this same thing happened with Landshark when I caught him forging me from aol and his own isp for all i know it's the same person that e-mailed him that account, you even added a few comments to that post about how easily this happens do you remember? Or should I dig up the post for you, I guess people are still passing around those group account names. If you like Ill email you the name and password so you too can use it.

"Brainbuster" <brain@buster.com> wrote in message news:a2u72eufs10@news5.svr.pol.co.uk...

> Really??? No AOL???

Nope, no aol. remember i am unemployed and just sit here all day how can i afford a broadband connection and aol and why would I need aol?

> Please explain this for us all...

Group Account? Read my above comments or reread the thread when Landshark forged me from aol and his isp and you guys backed him on his excuse.

>> Same e-mail, same user-agent, and same mailgate posting-account.

It seems when you post from mailgate you are able to change the nic and not email addy that is the account name and cannot be changed by whoever posts from it so you will see the same email, the same mailgate posting account no matter who uses it. You can find this out to when I send you the account info and you try it for yourself.

jabb, you had better watch what you say soon they will accuse you of being voobner, It is my turn this week they have accused no less that 6 people of being him in the past. If you speak out against Illegal Cb you you too will become a target of harassment and physical threats, verbal abuse it depends how thick your skin is in dealin with vermin like this. What I noticed is that they don't like the same rules applied to them as they try to hold others to. Voobner has a FAQ page you may want to visit. You see the more things we say the more we are able to lead them around by the nose hairs. Now adorn your flame vest and watch them go at it.

Chance favors the prepared Mind!

Hello Steve:

Great description. I would put it on the same channel as a near by CB
that is working with a out side antenna, and use a 9 foot length of wire
just plugged into the broken radios SO-239 Antenna Connector.

If the broken radio can just bearly hear the good radio, then this would
indicate that the receiver front end RF transistor is bad.

If you can't hear the good radio, then there something else wrong with
the radio receiver.

I'll bet Midland can fix very quickly.

By touching the center connection of the volume control / pot with your
finger or screw driver verifies the audio section is working if you hear
a hum.

I have a older transistor CB Radio I use as a signal tracer. The radio
has been disabled as a transmitter, so no transmit O matic. A coax
connects to the radios SO-239 connector, and the shield is connected to
the radio being tested chassie, the center connection is then used to
see where the received CB signal is being lost. But you need the radio
being tested on a good antenna to hear all the skip and noise.

Good luck.

Jay in the Mojave

A high school English teacher reminds her class of tomorrow's
final exam.

"Now class, I won't tolerate any excuses for you not being there
tomorrow. I
might consider a nuclear attack or a serious personal injury or
illness,
or
a death in your immediate family - but that's it, no other
excuses
whatsoever."

A smart-ass guy in the back of the room raises his hand and asks,
"What
would you say if tomorrow I said I was suffering from complete
and utter
sexual exhaustion?"

The entire class does its best to stifle their laughter and
snickering.
When
silence is restored, the teacher smiles sympathetically at the
student,
shakes her head, and sweetly says, "Well, I guess you'd have to
write the
exam with your other hand."

Dick, the TS520 does not do AM. I am surprised that you would
encourage a CBer to transmit with a ham rig. Shame on you.

But back to his game: he said he wasn't going to use it, he was just
going to listen with it. Checking the final tubes makes no sense in
that case. Also, if he just wants the Heil mike, he can pay much less
than $250 and get the mike alone.

Actually in this instance Fred, Aaron is correct, the rules he is referring
to are the frequency assignments, the freq that tim and the other person are
both wanting to use are outside the 11m CB frequencies allotted by the FCC.
So since tim is runing outside the rules, the rules for 11m / CB will not
protect him.

Oh, alright...

>
> The best piece of advice you got on the 520 was to check the finals.

Yep. Took the radio over to my partner's home and put it on station. He's an Xtra class Ham. Seems to be at, or near, full power. We did not notice any (apparent) drift. Receive was pretty good and Bill got some good reports back. The only thing really worrying me was that the radio sat in it's box for a lot of years unused. Seems as though there has not been any problems arising form that. The radio has been on station for a day and a half and still seems OK.
The mic turned out to not be a Heil. The fella that found the radio for me mistook it for one (don't ask me how). When I first saw it I could immediately see it was a stock, albeit old, Kenwood. Model # MC-50. Nothing remotely like a Heil. :-) Works pretty well though.

Or
> in the alternative have a really good supplier of tubes. If you plan

This is the final time I'm going to say it Aaron. "You are a fool". Where
does Dick say anything about transmitting on this radio? I suppose one as
mentally disturbed as you could, quite possibly, infer implication, but, no
reasonable person would. That explains it. You are far from being a
reasonable person.

>
> But back to his game: he said he wasn't going to use it, he was just

That's right, dolt. Perhaps the mists of confusion are lifting a tiny bit?

Checking the final tubes makes no sense in
> that case.

If you don't check every facet of operation when thinking about purchasing a
fairly expensive bauble, then that makes you an even bigger fool than I
thought.

Give it up, dolt. Your (so called) argument is dying on the vine.

Also, if he just wants the Heil mike, he can pay much less
> than $250 and get the mike alone.

More assumptions from the assumption king. Hardly earth shattering news.

Get help, Aaron.

I was wondering the same thing, you know those guys in California they are pretty open about alot of things.

> >He's an Xtra class Ham.

We are now impressed.

> Is he also an illegal CBer like you?

He may be aaron unfortanutly the license does carry any common sense when you get it as you see this NG is full of illegal Cbers who have a ham license.

That's funny. You don't seem to know anything about the TS520. You
don't know its value on the used market. Otherwise you'd have known
you didn't get any bargain by paying $250 for it. You don't know
anything about the radio itself or you wouldn't have had your extra
class pal look it over. So how exactly are you going to "clean it up"
and resell it at a profit? Wiping some Windex on it won't up the value
Jeff. Face it, you're either dumb, or lying (or both).

Please guys, don't take this as a flame or a jab. I am posting this to show that they ARE getting back into the enforcement business! It is consistent with what RH said 2 years ago--they were
going to get after the 10 meter encroachment and "freebanders". I imagine this poor guy *might* have gotten in RH's gunsights while they were after 10 meter "pirates". This is also
consistent with what I posted farther down the board about the fellow getting a $10,000 NAL
for unlicensed operation on 7238 KHZ. It could also be like Tim says--if you don't run huge
power, and your signal is clean, ya might get by?????? Who knows? I notice that in the case
below that there was an amplifier involved, so maybe that's what did it?? Since he was pretty close to 10 meters, maybe that's why he attracted their (FCC) attention.

I think you have it pretty well right, Jerry. As the Enforcement Bureau cranks up the odds of getting nailed by pure accident goes up. The two dump trucks in NC were just a case of two guys having their gear set near 28 MHz coming back from somewhere else. This bunch may have stopped at a truck stop to take a major whiz for all we know. The key thing is that they have reason to set the DF gear to 28 and around so this sort of thing may happen a whole lot more.

Dick

I bet I can fix it faster than Midland! Sounds like a problem in the brain of the radio, that gives you the channels. Hopefully you had an antenna on it.
Dave!

As "an observer" you seem to be falling down on the job. I made a comment on Jef's post. Jeff made a comment back. I answered. And so on. And so on. If that activity is being psycho, then you're in for a shock: there's a whole newsgroup full of them :)

But I get your point. It would be better for the freebanders if nobody criticized their dishonesty.

I am surprised you did not jump on the negative peak
compression-limiting-clipping (all we are arguing is thresholds and time
constants). But I guess there is a limit to the amount of mythology to be
blown out of the water on any given day.

This is another one of the 1940 'techniques' that had been abandoned in
the commercial world by the end of the Korean War. It finally dawned on
some that there was not a lot of sense in trying to feed more amplitude
variation than the 2nd detector was capable of decoding. Love them meter
readings tho.

I am beginning to think that CB is the mythical elephant's graveyard where
old elephants go to die but never seem to.

Well for one he may have wanted to make sure the radio was in good shape all
around because as you aparently cant seem to grasp the idea, that hey if
something goes bad or is bad, it could and may effect the way the rest of
the equipment, wether it be a radio, a car, a hand grenade, your moms
vibrator that broke and caused your dad to impregnate your mom, to go bad
and quit functioning at all. Besides, even if i wasnt to actualy operate
the radio in TX, *I* personally would feel better having a safe peice of
equipment that wont burn down my house if i leave it plugged in. Chances may
be small,
but the chance that you'll ever get a clue is about in the same percentile.
Also, if you read what Jeff said "and then, usually, turn around and sell
'em. Sometimes I keep them." USUALLY turn around and sell them, he never
stated he was going to do so, he also stated that sometimes he keeps them
for himself. Hey Aaron, if you are gonna nit pick someones post to death,
you should cover all YOUR bases so they dont have something to come back at
you with. At very least, you look like less of a idiot by covering your
bases. I personally could care less about you and your ambition to stop
illegal radio, i honestly dont see your crusade making a difference, but you
go way over board,
assuming anyone speaking of any equipment not made by
Maxon/Cobra/Uniden/Midland
is a felon or a criminal of sorts. Sometimes people are just curious,
would like to know more about something because they heard about it etc.
Yet thats your favorite moment to jump in and accuse someone of something.
Just because a post isnt about a above mentioned make and model, doesnt mean
they shouldnt be allowed to post a radio related message that maybe
someone else has the answer to. Also, if i was Jeff and licensed or trying
to get my license, i wouldnt give a rats ass where or from whom
my parts came from, if they fixed my problem. So what if a CBer or a
Ham operator that reads this group helps someone out. The guy
never once mentioned transmiting on the radio let alone using ir for CB.

BTW, Happy New Year Vooby

Aaron, when was the last time you contributed to the NG with something that wasnt you pointing out freebanding or amplifiers or illegal radio shops/stores/web sites? I can vaguely remember 1 post, but im not even sure i didnt just dream that in hopes that some day you would have something other to say. I personally beleive people have caught on already. Seriously, do you think no one has noticed your constant and numerious posts about illegal radio equipment, rules and regs, etc? Its hard to miss a minimum of 5 posts a day from someone, i dont care what you use to read the NG heh.

Im not calling you a commie, just a one track minded person. Is this all you do in your life, is point out stuff thats obvious to people day in and day out? I bet if you asked the question to the NG "Who here things freebanding and amplifiers are legal?" maybe 3 people, and thats a high number, would speak up. Do you think that maybe you are getting into the people who are "breaking the law"'s minds and changing peoples ways? Get real.. you stand about as much of a chance doing that as i do winning the power ball drawing.

But i guess everyone has dreams right? :)

David

Cross-posted to: alt.radio-shack,rec.radio.amateur.misc,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

Here's the thing, no they are not getting rid of the entire line of components. They are trimming back some of the stuff that has little to no movement as these product take up 30-50% of most stores and only accounts for 2% of the revenue. You wouldn't make the biggest rooms in your house closets would you? No, you use them for what you do most; eat, sleep and recreation. Secondly alot of the stuff they are eliminating I think you will see return in the form of more variety pack (I know you're all gonna moan, "but I just want this one, why do I need to buy all the others?") Also some stores I have heard are going to be getting a drawer setup, kinda like what you might see at a hardware store to keep the packages in to minimize the space taken up, but maximize what they can carry. Most Shack customers tend to be understanding from my observation. Hopefully those of you who enjoy reason will find solace in this note.

Those are BALLAST resistors, and not all RF power transistors have
them. They are there to equalize the currents between the transistors
when run in parallel, NOT to self-bias the BE junction. Yes, if you
overdrive one of those devices, the ballast resistor will change the
operation point of the device. But because this resistance is very
small (compared to an emitter resistor used for self-bias) the
difference is usually negligible, and is not enough to drive a
ground-bias (i.e, no-bias) amp into the B or AB operating region. You
can confirm this by comparing the internal ballast resistance of a
device (usually a fraction of an ohm) to the emitter resistance needed
to achieve self-bias (usually several ohms for power amps; which, of
course, reduces the collector current and the gain of the circuit and
improves linearity, all of which are contrary to your usual practice
of 'mo power'). It's not hard to calculate the values, the equations

are right there on the page you referenced. Why don't you try it and post the results. And you might also post the reasons why ballast resistors are integrated into some RF power transistors, and why self-bias (using external emitter resistance) is rarely used for higher power RF amps (the REAL reasons, not your subjective, opinionated stories).

>> >Been discussed, proven, and agreed upon before.
>>

>
>
>Others, as well. I have provided a link that states that a comon emitter
>amplifier can be self biased with the
>input waveform.. Something you hinted was impossible.

Your claim was that you can make a Class B or AB amp from a grounded-base amp by running the transistor into saturation. And you should also look back on your post: you say nothing about an intentional self-bias scheme, or even ballast resistance. You, of all people, should know that if you make such a generalized statement that does not apply generally you are going to get called on it.

BTW, when you run your transistor into saturation or beyond, what happens? It isn't really an amp anymore, it's more like a switch, isn't it? And driving it "above saturation" will send it into breakdown, doesn't it? What happens to your 'amp' then, Toll?

Is radio Shack the only electronics store in town? I dont know about you, but i can buy hand fulls of damn near any resistor, cap, diode, choke, etc from one of at least 2 electronics stores that sell parts here in town. If nothing else, order them from offline lol.. i know, its rediculas to order 2 resistors and pay 4 or 5 bucks in S&H, but its amazed me how many people actually are bent over this. Well they've discontinued a number of small things i've bought tons of over the years that i recently couldnt find any of. What the hell happened to their cigarette adaptore ends that you wired yourself? Thats only one of about 6 things hehe.. anyway i can somewhat share the frustration, but i've bought 99.98% of all my parts from other sources, hell even a CB shop at the truck stop was a source way back in the day lol.

They wish they had answers, what a stupid slogan for a company such as
this...
You would be lucky to find more than 1 radio shack employee per county
that has half a brain. The rest are drones that almost always have to ask
the manager, who has to call FW Texas for assistance before you can find
out if they have a Germanium diode they can mail you for $0.02 and $29.95
S&H or if they have a AAA battery.

I live in NJ, and as populated as it is, RS is the only local store has discrete components. Just out of curiosity David, where are you from? Silicon Valley area?

Years ago there was a store about 1/2 hour away that had several hundred bins of components and
surplus parts. No shrink wrap, just the parts moderately priced.
Any electronic enthusiast who went there felt like a kid in a candy store.

Thank you. You bring up a fabulously entertaining aspect of
rec.radio.cb that I like to call:

KEYCLOWN EXCUSES

I could write a book on this, and I just may. Illegal CB ops are
notoriously dishonest, so their excuses for illegal operation tend to
be quite funny, elaborately dumb, or just plain garden-variety lame.
From buying ham transcievers "just to listen"....to using amplifiers
"for doorstops" -- it's a sure bet that every new excuse will be
sillier than the last!

And now you want ME to make people like Jeff Mayner's lame excuses FOR
him.

Oh, of course, Jeff's TS520 needs to be tested before he puts it on
the shelf and never uses it. Why didn't I think of that?

And oh yeah, Jeff might want to "fix up" a HAM radio and sell it.
That's why he's in a CB newsgroup asking for advice. Asking in a HAM
newsgroup would make no sense at all. HAMS wouldn't know anything
about HAM GEAR.

Right. I could spend days coming up with reasons why a guy like Jeff who posts adamant defenses of illegal CB on a newsgroup would never do anything against the law in real life. Fortunately you guys are willing to do this for me.

Hey, maybe Jeff's actually an FCC agent with a bipolar disease! Or he could be a UL inspector testing vintage ham gear for fire hazards! Or he could be an alien visitor experimenting with human logic by posting things that don't make any sense! The possibilities are endless.

In the end, we are left with good old Occam's Razor and what it proves about the regulars in rec.radio.cb. The simplest explanation is likely the true one. And the regulars of rrcb - guys who have openly admitted operating illegal cb - are more than likely operating illegally.

>I personally could care less about you and your ambition to stop
>illegal radio, i honestly dont see your crusade making a
>difference,

Then why are you replying to me? I must be making some kind of an impression on you if you went to the trouble of trying to convince me to stop posting. That tells me you're worried that I may actually be making a difference. I hope it's not keeping you awake nights.

>but you go way over board, assuming anyone speaking of any
>equipment not made by Maxon/Cobra/Uniden/Midland
>is a felon or a criminal of sorts. Sometimes people are just
curious,
>would like to know more about something because they heard about it
etc.

Blah blah blah. This is REC.RADIO.CB. People are not stupid. They know CBers use ham gear and mod radios and use amps. Trying to deny it with a truckload of lame-o excuses just makes you look more sleazy.

>Yet thats your favorite moment to jump in and accuse someone
>of something. Just because a post isnt about a above mentioned
>make and model, doesnt mean they shouldnt be allowed to post
>a radio related message that maybe someone else has the answer
>to. Also, if i was Jeff and licensed or trying
>to get my license,

Ah hah ha. That's rich. Now you've got Jeff being the poor innocent newbie ham looking for advice and just ending up in a CB newsgroup by accident. It's a laughable picture because both you and I and the NG know different.

> i wouldnt give a rats ass where or from whom
>my parts came from, if they fixed my problem. So what if a CBer or a
>Ham operator that reads this group helps someone out. The guy
>never once mentioned transmiting on the radio let alone using it for
CB.

He never once mentioned NOT using it on CB, either.

-Aaron-

Makes it degenerative, too. Pretty good stunt for getting a vacuum tube
into class A because they needed bias to shut them down and get into class
A; pretty dumb in a circuit that takes forward bias to get the device off
its dead butt.

Come to think of it, an emitter resistor will have the exact
-opposite- effect in a ground-bias amp, pushing the emitter even more
positive with respect to the base. So actually, you are -decreasing-
your conduction angle using an emitter resistor, saturated or not.

Next.

Toll's use of 'negative peak compression' is just a euphamism for
harmonic distortion and/or non-linear response. He is just taking a
bad thing and putting a techo-spin on it to make it sound cool.

>This is another one of the 1940 'techniques' that had been abandoned in
>the commercial world by the end of the Korean War. It finally dawned on
>some that there was not a lot of sense in trying to feed more amplitude
>variation than the 2nd detector was capable of decoding. Love them meter
>readings tho.

Back then the practice was to use high-Q output tanks mainly because
there were no low-impedance power amps, so such distortion was
filtered and therefore acceptable. In a low-impedance wideband amp it
just pisses off the neighbors.

>I am beginning to think that CB is the mythical elephant's graveyard where
>old elephants go to die but never seem to.

Yeah, I'm getting tired of this myself. Fun is fun, but it seems that
a lot of these folks are actually -proud- of throwing away the
teachings from a well-established applied science in favor of
practicing RF voodoo. Can't you see what it will be like several years
from now: a bunch of overweight, drunk and naked keyclowns dancing
around the holy amp, sprinkling it with fresh chicken blood, chanting
"A-A-A-U-U-D-I-I-O-O-O". Gruesome.

>is it you have again?

Hmmm..., let's see: I started soldering when I was 8, I was fixing
radios and TVs when I was 13, I was a radio tech in the USMC, I worked
in a commercial radio shop while earning my EE, then worked as an RF
engineer for a large, well-known, international company for a few
years. Recently I have been doing more of a variety, such as restoring
antique radios, general electronics repair, freelancing some designs,
and maintaining a couple broadcast transmitters and recording studios.
Oh yeah, I run sound for a local band once in a while. But maybe you
are right, Timmy. Maybe, after 30 years of practical experience and
formal education, I really don't know what I'm talking about....

...or, maybe you should just stick to selling pellet stoves.

Ok great. If I ever think I'll need it, I'll learn it. But that's a big IF.

Hey, I got an idea. As long as you inisist that we get approved for the "modulation" portion of radio perhaps you could also throw in the English language as a requirement. I'm sure that will go over with the international community really well.

It's quite simple. There is no reason for a code requirement. The reason more people aren't into Amateur Radio is simply because of the code test. Why should I (or anyone else) have to waste their most precious commodity (time) learning something they will only need to know ONCE in their lifetime? And the only time they'll have to know it is for the test.

As long as you're going to count "modulation" as a requirement for getting the license, you may as well make knowing how to saddle a horse necessary to get a drivers license. Technology has progressed beyond the need to know morse code, send smoke signals, or beat large drums. If Samuel Morse were alive today I'd bet he'd not only jump seeing a color HDTV, but I bet he'd keel over and die when you placed the remote in his hand and gave him a bud and some chips.

When it all boils down to it the only reason that comes out as truth in the morse code debate is, "It keeps the riff raff out." So, basically what you need is a requirement that keeps complete and total idiots off the amateur band.

Take out the code, then Add a few more requirements. I'd suggest for a requirement that people know plain old RS232 serial communications. How's about some basic analog networking? (repeaters), etc...

Having to know morse code as a requirement is simply a joke when it comes down to the truth of the matter. What people are asking for is a change in the requirements. Happens all the time... They're called ammendments. Take the code requirement out, and replace it with something else that a total moron can't figure out. And as far as morons go, I can pretty much guarantee that if they've read this message this far down they aren't one. They may st ill be an idiot though ;-)

See, that way amateurs keep the filter in place, and gain productive members in the Amateur community.

ARRL gets more members, which mean more dues, which mean.....
(you get the idea) More radios are bought by the new members, which stimulates new product, which gains interest, which means more experimenting, which means new RF technology, which gains interest.....
Get it? Good.

Now, I'm gonna go out and saddle my horse. But, ya know.... I'm not sure if I need to have a license to do that? I wonder if everyone is just born with a license to operate toilet paper? Well, if I ever find out otherwise I'll get someone that's a licensed to do so for me. But don't worry, I want someone competant enough to do a just and proper job, so I'll be sure to ask if they're licensed by the FCC to send morse code first. At least that way I won't have to remind them to flush.

Now this example below is great... "What happens when all this digital fails?" Oh gadzooks man... Y2K was a few years ago!!!! What happens when the earth crashes into the sun? Oh, gee... I know... I'll run downstairs to my JFK memorial bomb shelter lined with asbestos and lead, then start the diesel generator and warm up the CW transmitter that's hidden in my secret survival bunker. I'll then send CW to Batman and the Magnificent 7 and warn them about the earths plight of immiment doom. !!!!!!!!!!!!! NOT !!!!!!!!!!!!

Is that the same international community that tried to get the G.W. Bush to sign a "clean air" agreement that would make us responsible for their bad air pollution? Allowing them to sue the U.S. for damages justified by junk science?

Yeah, I'll go out of my way for em... No problem... Next time I'm in Europe I'll be sure and announce to them that an American is polluting their air before I let the "low note" from my bowels reverberate it's arrival.

I'll call it the "Elevator Tour" in my vacation scrapbook..... I can see it now... And that's a picture of Hans just before he puked all over Steff's newly laundered Armani and Hugo Boss. Notice the green blueish color and how he's loosening his tie. But thank god Yuri knew morse code. If it weren't for him we'd have all perished for sure.

Oh yeah... I'm not dyslexic, and I still think that ANY code test is a complete and utter waste of time.

Yeah, I'd believe that... Yup... I mean all that satcom gear they have... You're right... Absolutely. Satellites in space, men on the moon, space station... It's all just to keep our enemies looking to the sky when we have a whole bunch of ham's pounding on keys. Yup... Oh, absolutely.... But, damnit... You blew their cover!!!

Got news for ya pal... Motorola has the Iridium phone. You can be on the north pole, south pole, or what have you and "reach out and touch someone"..... So, take the wool off your eyes.

Actually you point in case of an global emergency is quite lame.....take the global comunications structure you now have away from you and you would BEG a ham to make an autopath for you. For the ignorant and stupid of you out there believe or not right now there arm MANY vollunteer hams that are right now autopatching back to the US during our war times. Yes hams actually sit all day long and make necessary phone calls for our government back to the good ol USA. Now for you dumb people out there exsplain to me why they do this??? Simple its the best way to communicate.

Getting rid of the Morse requirement for the HF bands. I second that motion!

Here's why. Years ago people used to beat very loud drums to communicate over very long distances. Some even used smoke signals. I cannot I imagine a situation where I would have to use either one of those methods to communicate. Nor can I see any use for Morse Code with today's available technology.

Having Morse Code as a requirement for HF privleges is analogous to requiring the knowledge of how to saddle a horse in order to get your drivers license. As far as you CDL endorsed guys out there, you'd have to learn how to hitch a wagon.

I mean, what's next? Having to make a telephone out of two tin cans and a string in order to get a computer networking degree from Duh-Vry?

It serves no purpose at all. Why bother knowing how to transmit 13 wpm when you can send data at WAAY faster speeds halfway across the planet in under 300ms?????

No - wait. Let me think about this. Here are the only possible scenarios I can imagine that justify Morse Code as a requirement for HF use.

1.. If the commies attacked and most of our transistors were blown from the EMP then the old tube rig would be the only thing that would function as I'm hiding under my 1950's desk / emergency bomb shelter.

2.. What if the earth crashes into the sun? The solar flares would knock out all of our communications satellites for sure then! Tubes would be the only option!

3.. Suppose those Aliens that call into Art Bell from the future decide to attack earth with their super magneto ditigilator distructor beam weapon?

I'm running short here on Ideas for "HYPOTETICAL" situations where I would actually need to know Morse Code, smoke signals, or pound on some very loud drums in today's world. Feel free to contribute to the list!

Dunno... Nostalgia? That seems to be the only purpose for it.

The European you get to thank for the International Telecommunications Union is Kaiser Wilhelm I of Prussia later Germany. Seems he was in Paris in 1869 casing the joint (he invaded the following year) and found he could not send a cable to Berlin.

Like it or not there are some areas where it is nice to work thru an international group. It is useful if sinking ships can SOS, planes can land, and satellites have the same up and down links everywhere. You take the bad with the good. Morse testing, if not Morse Code, is dead but some ribbons need tying, that's all.

But it would also seem that your approach is something less than adult. One often does things that in a given context make no sense. I held until recently a Nebraska Property/Casualty Insurance license for which I had to learn the wonders of Blue Water Marine coverage which is not a major issue 800 miles from the ocean believe me. You want the ticket or you don't.

It is your basic Nintendo exercise and is grim death only if you allow it to be. Take the time, do the crime. Sounds like you have gotten your testicles in the way.

Don't surprise me, with the way he's taken to spamming this newsgroup. Still, it's a way to keep the money rolling in when sales are down (like just after xmas). Many sites are funded by the adverts they show, and I have seen some that open a string of pop-up windows with adverts.

One site I know of opens a pop-up that links to a site, and automatically installs their software on your system... with no warnings or requests. First you know is an icon next to the clock on your task bar and it is already running on your system. And the software doesn't even have anything to do with the site you were visiting.

But there's no such thing as a free lunch and the sites must be funded somehow. The pop-up ads are used because they attract attention, banner ads don't often get noticed and you can only reasonably fit one banner to a page. Out of interest, which do you prefer...
1. Pop-ups
2. Graphic ads down the side of a page that reduce the content space, sometimes to just a strip down the middle.
3. Banner ads that reduce the height of the content area.

Source record: 113871

Once upon a time, there was a non-conforming sparrow who decided
not to fly south for the winter.

However, soon the weather turned so cold that he reluctantly started to
fly south. In a short time, ice began to form on his wings and he fell to
earth in a barnyard, almost frozen.

A cow passed by and crapped on the little sparrow. The sparrow thought
it was the end. But, the manure warmed him and defrosted his wings.
Warm and happy, able to breathe, he started to sing.

Just then a large cat came by and, hearing the chirping, investigated the
sounds. The cat cleared away the manure, found the chirping bird and
promptly ate him.

The moral of the story:

1. Everyone who craps on you is not necessarily your enemy.
2. Everyone who gets you out of the crap is not necessarily your friend.
3. And, if you're warm and happy in a pile of crap, keep your mouth shut!

> Jim
===

Hi Jim.

The calculations assume a purely resistive load. I know this is hoping for perfection, but maybe if the tests are done on a dummy load we could get close. Anyways, I don't think that people on here are worried about a watt or two here and there... judging by the power levels mentioned on this group ;~)

Hey, do you get people over there that "tune up" CBs connected to an antenna, using CBers reports instead of a meter? In one CB shop I knew of, the "rig doctor" only had an old broken multimeter (LCD damaged), and a very old and slow frequency counter that probably hadn't ever been calibrated. When customers returned their radios with compaints about things like "5 watts on CH1 and 1 watt on CH40" or "distorted audio" he would tell them that they are wrong and that he used £1000s of test equipment to check it.

There's life on this newsgroup... but not as we know it, Jim.

Hi Sparky...

You was, I got that from a reply to your post. But, as I addressed a comment to you, I thought I should take you out long enough to reply to your response (I knew you had to reply).

Anyway, I hope these references are good enough to clear up the question of how it is measured. What was that book you was looking at, I will have to see if I can find a copy here... My copy of the Radio Handbook was specially ordered and I had to wait for it, although the other books were readily available.

NEWS FLASH - GOD ANNOUNCES THE 11TH COMMANDMENT.

During a recent staff meeting in Heaven, God, Moses, and Saint Peter concluded that the behavior of Ex-President Clinton has brought about the need for an eleventh commandment.

They worked long and hard in a brain-storming session to try to settle on the wording of the new commandment, because they realized that it should have the same style, majesty and dignity as the original ten. They began their brain-storming and came up with the 11th.

After many revisions, they finally agreed that the eleventh commandment should be:

"Thou shalt not comfort thy rod with thy staff."

or use it, so they shouldn't have to learn it.

Wrong. Math is a discipline. It teaches quanitative reasoning, a
mental process that needs to be developed and exercised. The
requirement for Morse is no different: it demonstrates to the rest of
the community that you have learned one of the disciplines necessary
for radio communication whether it be by Morse, SSB, AM, "FM PM",
audio, digital, or whatever. It's a discipline for COMMUNICATION, and
if you can't understand that simple fact, then you shouldn't be
criticizing those that do.

Hello Jeff: The 520 is great radio, I used one as a standby radio for years.

I bought the radio from a old CB'er & Ham type ah dude many years ago. I just sold it to a friend a few months ago as he was begging me to sell to him.

This rig uses 6146 finials, I believe there all over the place, and even RF Parts has them.

My neighbor down the dirt road got me interested into Icom, he uses a Icom 746 which is a all mode Transceiver, for HF, 6 and even 2 meters. I needed a radio for 6 meters, to check out 6 meters with the Interceptor 10K Antenna. Well I am keeping the radio, it works just to well and does 100 watts on all the bands, great!!!!!!

Icom will be coming out with a Icom 746 PRO, so the 746 radios will need to be dumped soon, probably at lower prices. I checked HRO in Anaheim, and they wanted 1250 or 1289 for them now.

Get that highly modifier P500 / M5K Antenna up with the 520. What you will see is a very large reduction of bleed over, and other misc interference that normally is heard with CB Radios.

The difference is like Day and Night.

Rock on Dude!

Hello Brainbuster: Here's a e-mail that someone sent to me on Billy Boy.

Jay in the Mojave

THINK ABOUT IT!

After the 1993 World Trade Center bombing, which killed six and injured 1,000; President Clinton promised that those responsible would be hunted down and punished.

After the 1995 bombing in Saudi Arabia, which killed five US military personnel; Clinton promised that those responsible would be hunted down and
punished.

After the 1996 Khobar Towers bombing in Saudi Arabia, which killed 19 and
injured 200 US military personnel; Clinton promised that those responsible
would be hunted down and punished.

After the 1998 bombing of US embassies in Africa, which killed 224 and injured 5,000; Clinton promised that those responsible would be hunted down
and punished.

After the 2000 bombing of the USS Cole, which killed 17 and injured 39 US
sailors; Clinton promised that those responsible would be hunted down and
punished.

Maybe if Clinton had kept his promise, an estimated 2,900 people in New York and Washington, DC that are now dead would be Alive today.

AN INTERESTING QUESTION:

This question was raised on a Philly radio call-in show. Without casting
stones, it is a legitimate question. There are two men, both extremely wealthy. One develops relatively cheap software and gives billions of dollars to charity. The other sponsors terrorism.

That being the case, why is it that the Clinton Administration spent more
money chasing down Bill Gates over the past eight years than Osama Bin Laden?

THINK ABOUT IT!

It is a strange turn of events. Hillary gets $8 Million for her
forthcoming
memoir. Bill gets about $12 Million for his memoir yet to be written.

This from two people who have spent the past 8 years being unable to
recall
anything about past events while under oath! Incredible!

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

well they wouldn't let me bring a bottle on the plane, and my first few days
in NYC I didn't know the area well enough to go out and look for a liquor
store. I did spend a few nights closing down the Harley Davidson Cafe. That
gets expensive after a while though, especially when you have a high
tolerence for alcohol to start.

Yeah, you go ahead and do that.

It is commonly accepted in a grounded emitter amplifier that you can self
bias them.

Of course, I am SURE you are going to argue this point. Save yourself the
frustration. I have proven it, it has been discussed here, and proven here
in tests others have done. I won't reply to any argument you put up because
it either isn't worth it, you will debate terms instead of the topic, or you
just choose not to reply when you get pushed into a corner.

Have a good one, though.

> Those are BALLAST resistors, and not all RF power transistors have
> them.

Out of the transistors used in 12 volt CB, which ones don't?

We discuss CB here, not other services.

They are there to equalize the currents between the transistors
> when run in parallel, NOT to self-bias the BE junction. Yes, if you
> overdrive one of those devices, the ballast resistor will change the
> operation point of the device.

Which was my original statement you questioned.

But because this resistance is very
> small (compared to an emitter resistor used for self-bias) the
> difference is usually negligible, and is not enough to drive a
> ground-bias (i.e, no-bias) amp into the B or AB operating region.

Not true. Been proven. Anyone that would like to debate the question
can feel free to go to google and search on the disseratation given by
Dennis O.

You
> can confirm this by comparing the internal ballast resistance of a
> device (usually a fraction of an ohm) to the emitter resistance needed
> to achieve self-bias (usually several ohms for power amps; which, of
> course, reduces the collector current and the gain of the circuit and
> improves linearity, all of which are contrary to your usual practice
> of 'mo power').

Of course, driving a pair of 2879s with a MRF 455 (about 50 watts PEP drive
each 2879) wouldn't cause it to shift class, either, would it?

The BE junction of a transistor won't rectify any of the input, will it?

It's not hard to calculate the values, the equations
> are right there on the page you referenced. Why don't you try it and
> post the results. And you might also post the reasons why ballast
> resistors are integrated into some RF power transistors, and why
> self-bias (using external emitter resistance) is rarely used for
> higher power RF amps (the REAL reasons, not your subjective,
> opinionated stories).

Because at this point, it has already been done, and you are more than
welcome to browse the archives and find it yourself, since YOU are the
one that is arguing the point.

Again, does the BE junction of a common base transistor have ANY
rectification properties?

>
> >> >Been discussed, proven, and agreed upon before.

> >amplifier can be self biased with the
> >input waveform.. Something you hinted was impossible.
>
> Your claim was that you can make a Class B or AB amp from a
> grounded-base amp by running the transistor into saturation.

No, my claim was that when overdriven, a transistor amp with a base grounded
can be caused to shift service.

And you
> should also look back on your post: you say nothing about an
> intentional self-bias scheme, or even ballast resistance. You, of all
> people, should know that if you make such a generalized statement that
> does not apply generally you are going to get called on it.

No, I should have realized that if I didn't put it in laymans terms, using
YOUR
commonly accepted terminology instead of terms that people in this newsgroup
(remember, your a newbie here) use, then I would have 5 or 6 pages of
rebuttals about how Bird Watts don't exist (even when you where told by
others in the newsgroup that it was a reference point that is commonly used
in this newsgroup, etc., etc., etc.

>
> BTW, when you run your transistor into saturation or beyond, what
> happens? It isn't really an amp anymore, it's more like a switch,
> isn't it?

The flywheel effect will allow RF to be transmitted as well. What about
Class E amplifiers? They don't run into saturation? They don't operate
as a switch?

And driving it "above saturation" will send it into
> breakdown, doesn't it? What happens to your 'amp' then, Toll?

Judging from the drive levels involved in competition, the output powers
and the reliability some see, not what YOU expect.

> receiver regardless of selectivity.

No, that isn't ALWAYS why. Or is your Xtal ball out again telling us what
EVERY truck driver is using?

Or are you now allowed to generalize, whereas everyone else must be explicit
with you?

Sparky, you must abide by your rules here. Not every truck driver is
illegal, with snipped
limiters, etc.

But someone sitting across the street from an AM CB radio, even stock,
trying to operate
SSB probably won't be able to... Even if the AM rig is legal.

>
> >If you combine all of the points I raised, instead of nitpicking them

I have no disdain for formal education. I have disdain for people who come
to
public forums and tell everyone they are wrong. Wrong for trying something
different, wrong for operating different than YOU want / expect / need them
to,
disdain for people who attempt to trample on others, etc., etc, etc.

YOU are the one who spews what happens in a book. I tell people what has
been found by reading, as well as going out and DOING it.

Tell me. when you parallel two 1/4 wave antennas, spaced a quarter wave
apart,
both of them tuned individually for 1:1 swr, what happens?

Not using a matching network, but just adding a T, using 50 ohm coaxial
cable?

>

> were trying to say.

No, what I was trying to say was that you don't always get to use USB and
LSB
on the same frequency in common practice. That's all. YOU started in with
the rest,
that I was saying SSB was more inferior, et al.

ALL I was saying was that in common use, your statements don't always hold up. You
where quoting textbook theory, when in fact, it doesn't ALWAYS work under real world
conditions.

>

> crappy radios and splatterboxes? I'll agree to that.

No, what I was saying (I keep having to reiterate the same thing here) is
that
in REAL WORLD PRACTICE, you CAN'T ALWAYS COUNT ON the 3Kc
of bandwith of an SSB transmitter allowing you to use the same frequency for
USB and LSB useage.... As well as the fact that SSB isn't the "cure all" for
all
our woes.

>

My "keydown clique"...? Please provide proof that most of the people I deal
with
are involved in keydowns now?

And yes, most of the people I know use the 8719 chassis from Uniden. An SSB
capable
chassis. Please disprove this, or keep your assinine comments to yourself.

>

No kidding.

That guy in 24 megs is DAMNED SURE going to cause interference to someone else on 27.355, aren't they.

More generalizations from Sparky. It's OK when he does it, though. Just ask him. He proves it with every post.

"If you run it inside the mast, you don't have to worry much. You can
coil it around the mast, "

I called on you to prove your post first. Of course, running away from
the challenge is indicative of someone who can't debate the point, or is
WRONG.

Since you didn't provide the reference asked for, we will have to assume
your
WRONG.

> >base of the mast.
>
> Yep, that's what I said. Notice I didn't say anything about turns.

No, but you led him to believe something that wasn't true.

Its a "bird watts" thing Sparky. Would it be the same number of turns? A
different
number of turns?

Is it PEP or AVG Bird watts?

Same thing. you better start getting your posts as exact as you hold
everyone else up to, or
I will continue crawling up your ass until you do.

>

> to wash his wanker either, Toll.

Nope, but if I am going to give someone instruction on how to do something,
I am
at least going to tell him what needs to be changed when I start
interjecting other
methods to him than the original asked, otherwise you end up with someone
who doesn't have a complete set of instructions to complete the project at
hand.

As an Engineer, you should KNOW that!

You know I showed some posts from this
thread and a couple others to the radio shop
next door to where I worked, and they laughed
at the comments that high powered cb's are causing
interference to police & emergency comms.
They do all the radio set ups for the county and
for most of the surround municipalities for around
25 plus miles. They said the only way a high powered
cb could interfere is if they were right next to the vehicle.
Even then they would most likely only come over the
extension speaker, not the radio signal itself.

Every year a couple of life long friends and I
go To Cabo for 6 days of fishing & golf. Last
year while going through customs, just as this woman
walked away she dropped her shoulder bag CRASH!
and then the pungent smell of tequila filled the air.
Needles to say the customs agent went over, looked
in and said, "no need to pay duty on those 10
broken bottles" LMAO! he then says to us "what's
in the cooler" We said "fish" he goes "ok" and we
stroll right past the woman with no more tequila.

3568. <**Albert Einstein: A Jewish Myth**>

Newsgroup: rec.radio.cb
Date: 2002-01-27 18:12:10 UTC
From: Marjorie Knoller <Marjorie_Knoller@sybil.brand.org>
Message-ID: <MPG.16bde2c43e6991f9896a4@24.2.2.74>
Source record: 113954
Cross-posted to: rec.radio.scanner,rec.radio.cb,alt.fan.britney-spears,rec.skydiving,rec.sport.cricket

.....

Albert Einstein: A Jewish Myth

One of the statements of Adolf Hitler most often quoted by the Jewish media is the following from Mein Kampf, I:10:

"The great masses of people ... will more easily fall victims to a big lie than to a small one."

Of course, Hitler is quoted out of context in an attempt to portray this statement as Hitler's own, personal philosophy or strategy. But if we read this selection in context, we find that he is speaking of the Jews who had ruined his country, and he is trying to explain how the German people fell victim to Jewish lies. In fact, Herr Hitler even tells us what this great lie is that duped the German people into being controlled by the Jews. He continues:

"Those who know best this truth about the possibilities of the application of untruth and defamation, however, were at all times the Jews; for their entire existence is built on one single great lie, namely, that here one had to deal with a religious brotherhood, while in fact one has to deal with a race - what a race! As such they have been nailed down forever, in an eternally correct sentence of fundamental truth, by one of the greatest minds of mankind; he called them 'the great masters of lying.' He who does not realize this or does not want to believe this will never be able to help truth to victory in this world."

Hitler here was referring to Arthur Schopenhauer, the eminent 19th century German philosopher who was outspoken regarding the true nature of Jews. We do not need to rely upon the opinions of German philosophers and political leaders regarding this character trait of the Jews, for Jesus Christ has said of the Jews,

"You are of your father the Diabolical One, and the lusts of your father you wish to do. That one was a murderer from the beginning, and he has not stood in the truth because there is no truth in him. When he speaks a lie, he speaks of his own, because he is a liar, and the father of it" (John 8:44 AST).

Furthermore, the New Testament warns us not to listen to "Judaizing myths" (Titus 1:14). But Jewish myths are exactly what destroyed Germany and what have destroyed America today. Herr Hitler may have been correct in what he felt was the greatest Jewish lie, but there are many, many more which have had a damning effect on the white race.

One of the greatest is certainly the lie of the Hebrew Masoretic Text and the removal of the Greek Septuagint from the hands of white Christians, but each Jewish myth stings with the same poisonous venom. One of the great Jewish myths of the 20th century is Albert Einstein.

Albert Einstein is held up by the Jewish liars as a rare genius who drastically changed the field of theoretical physics. As such, he is made an idol to young people and his very name has become synonymous with genius. The truth, however, is very different. The reality is that Einstein was an inept, moronic Jew who could not even tie his own shoelaces; he contributed nothing original to the field of quantum mechanics or any other science, but on the contrary he stole the ideas of other men and the Jewish media made him a hero.

When we actually examine the life of Albert Einstein, we find that his only brilliance lies in his ability to plagiarize and steal other people's ideas, passing them off as his own.

Einstein's education, or lack thereof, is an important part of this story. The Encyclopedia Britannica says of Einstein's early education that he "showed little scholastic ability." It also says that at the age of 15, "with poor grades in history, geography, and languages, he left school with no diploma." Einstein himself wrote in a school paper of his "lack of imagination and practical ability." In 1895, Einstein failed a simple entrance exam to an engineering school in Zurich. This exam consisted mainly of mathematical problems, and Einstein showed himself to be mathematically inept in this exam. He then entered a lesser school hoping to use it as a stepping stone to the engineering school he could not get into, but after graduating in 1900, he still could not get a position at the engineering school! Unable to go to the school as he had wanted, he got a job (with the help of a friend) at the patent office in Bern. He was to be a technical expert third class, which meant that he was too incompetent for a higher qualified position. Even after publishing his so-called groundbreaking papers of 1905 and after working in the patent office for six years, he was only elevated to a second class standing. Remember, the work he was doing at the patent office, for which he was only rated third class, was not quantum mechanics or theoretical physics, but was reviewing technical documents for patents of every day things; yet he was barely qualified.

He would work at the patent office until 1909, all the while continuously trying to get a position at a university, but without success. All of these facts are true, but now begins the Jewish myth. Supposedly, while working a full time job, without the aid of university colleagues, a staff of graduate students, a laboratory, or any of the things normally associated with an academic setting, Einstein in his spare time wrote four ground-breaking essays in the field of theoretical physics and quantum mechanics that were published in 1905. Many people have recognized the impossibility of such a feat, including Einstein himself, and therefore Einstein has led people to

believe that many of these ideas came to him in his sleep, out of the blue, because indeed that is the only logical explanation of how an admittedly inept moron could have written such documents at the age of 26 without any real education. However, a simpler explanation exists: he stole the ideas and plagiarized the papers.

Therefore, we will look at each of these ideas and discover the source of each. It should be remembered that these ideas are presented by Einstein's worshippers as totally new and completely different, each of which would change the landscape of science. These four papers dealt with the following four ideas, respectively:

1. The foundation of the photon theory of light;
2. The equivalence of energy and mass;
3. The explanation of Brownian motion in liquids;
4. The special theory of relativity.

Let us first look at the last of these theories, the theory of relativity. This is perhaps the most famous idea falsely attributed to Einstein. Specifically, this 1905 paper dealt with what Einstein called the Special Theory of Relativity (the General Theory would come in 1915). This theory contradicted the traditional Newtonian mechanics and was based upon two premises: 1) in the absence of acceleration, the laws of nature are the same for all observers; and 2) since the speed of light is independent of the motion of its source, then the time interval between two events is longer for an observer in whose frame of reference the events occur at different places than for an observer in whose frame of reference the events occur in the same place. This is basically the idea that time passes more slowly as one's velocity approaches the speed of light, relative to slower velocities where time would pass faster.

This theory has been validated by modern experiments and is the basis for modern physics. But these two premises are far from being originally Einstein's. First of all, the idea that the speed of light was a constant and was independent of the motion of its source was not Einstein's at all, but was proposed by the Scottish scientist James Maxwell. Maxwell studied the phenomenon of light extensively and first proposed that it was electromagnetic in nature. He wrote an article to this effect for the 1878 edition of the Encyclopedia Britannica. His ideas prompted much debate, and by 1887, as a result of his work and the ensuing debate, the scientific community, particularly Lorentz, Michelson, and Morley reached the conclusion that the velocity of light was independent of the velocity of the observer. Thus, this piece of the Special Theory of Relativity was known 27 years before Einstein wrote his paper.

This debate over the nature of light also led Michelson and Morley to conduct an important experiment, the results of which could not be explained by Newtonian mechanics. They observed a phenomenon caused by relativity but they did not understand relativity. They had attempted to detect the motion of the earth through ether, which was a medium

thought to be necessary for the propagation of light.

In response to this problem, in 1889, the Irish physicist George FitzGerald, who had also first proposed a mechanism for producing radio waves, wrote a paper which stated that the results of the Michelson-Morley experiment could be explained if,

"... the length of material bodies changes, according as they are moving through the ether or across it, by an amount depending on the square of the ratio of their velocities to that of light."

This is the theory of relativity, 13 years before Einstein's paper!

Furthermore, in 1892, Hendrik Lorentz, from The Netherlands, proposed the same solution and began to greatly expand the idea. All throughout the 1890's, both Lorentz and FitzGerald worked on these ideas and wrote articles strangely similar to Einstein's Special Theory detailing what is now known as the Lorentz-FitzGerald Contraction. In 1898, the Irishman Joseph Larmor wrote down equations explaining the Lorentz-FitzGerald contraction and its relativistic consequences, 7 years before Einstein's paper. By 1904, Lorentz transformations, the series of equations explaining relativity, were published by Lorentz. They describe the increase of mass, the shortening of length, and the time dilation of a body moving at speeds close to the velocity of light. In short, by 1904, everything in Einstein's paper regarding the Special Theory of Relativity had already been published.

The Frenchman Poincar&#65533; had, in 1898, written a paper unifying many of these ideas. He stated seven years before Einstein's paper that,

"... we have no direct intuition about the equality of two time intervals. The simultaneity of two events or the order of their succession, as well as the equality of two time intervals, must be defined in such a way that the statements of the natural laws be as simple as possible."

Anyone who has read Einstein's 1905 paper will immediately recognize the similarity and the lack of originality on the part of Einstein. Thus we see that the only thing original about the paper was the term 'Special Theory of Relativity.' Everything else was plagiarized. Over the next few years, Poincar&#65533; became one of the most important lecturers and writers regarding relativity, but he never, in any of his papers or speeches, mentioned Albert Einstein. Thus, while Poincar&#65533; was busy bringing the rest of the academic world up to speed regarding relativity, Einstein was still working in the patent office in Bern and no one in the academic community thought it necessary to give much credence or mention to Einstein's work. Most of these early physicists knew that he was a fraud.

This brings us to the explanation of Brownian motion, the subject of another of Einstein's 1905 papers. Brownian motion describes the irregular motion of a body arising from the thermal energy of the

molecules of the material in which the body is immersed. The movement had first been observed by the Scottish botanist Robert Brown in 1827. The explanation of this phenomenon has to do with the Kinetic Theory of Matter, and it was the American Josiah Gibbs and the Austrian Ludwig Boltzmann who first explained this occurrence, not Albert Einstein. In fact, the mathematical equation describing the motion contains the famous Boltzmann constant, k. Between these two men, they had explained by the 1890s everything in Einstein's 1905 paper regarding Brownian motion.

The subject of the equivalence of mass and energy was contained in a third paper published by Einstein in 1905. This concept is expressed by the famous equation E=mc^2. Einstein's biographers categorize this as "his most famous and most spectacular conclusion." Even though this idea is an obvious conclusion of Einstein's earlier relativity paper, it was not included in that paper but was published as an afterthought later in the year. Still, the idea of energy-mass equivalence was not original with Einstein.

That there was an equivalence between mass and energy had been shown in the laboratory in the 1890s by both J.J. Thomsom of Cambridge and by W. Kaufmann in G�ttingen. In 1900, Poincar� had shown that there was a mass relationship for all forms of energy, not just electromagnetic energy. Yet, the most probable source of Einstein's plagiarism was Friedrich Hasen�hrl, one of the most brilliant, yet unappreciated physicists of the era. Hasen�hrl was the teacher of many of the German scientists who would later become famous for a variety of topics. He had worked on the idea of the equivalence of mass and energy for many years and had published a paper on the topic in 1904 in the very same journal which Einstein would publish his plagiarized version in 1905. For his brilliant work in this area, Hasen�rhl had received in 1904 a prize from the prestigious Vienna Academy of Sciences.

Furthermore, the mathematical relationship of mass and energy was a simple deduction from the already well-known equations of Scottish physicist James Maxwell. Scientists long understood that the mathematical relationship expressed by the equation E=mc^2 was the logical result of Maxwell's work, they just did not believe it. Thus, the experiments of Thomson, Kaufmann, and finally, and most importantly, Hasen�rhl, confirmed Maxwell's work. It is ludicrous to believe that Einstein developed this postulate, particularly in light of the fact that Einstein did not have the laboratory necessary to conduct the appropriate experiments.

In this same plagiarized article of Einstein's, he suggested to the scientific community, "Perhaps it will prove possible to test this theory using bodies whose energy content is variable to a high degree (e.g., salts of radium)." This remark demonstrates how little Einstein understood about science, for this was truly an outlandish remark. By saying this, Einstein showed that he really did not understand basic

scientific principles and that he was writing about a topic that he did not understand. In fact, in response to this article, J. Precht remarked that such an experiment "lies beyond the realm of possible experience."

The last subject dealt with in Einstein's 1905 papers was the foundation of the photon theory of light. Einstein wrote about the photoelectric effect. The photoelectric effect is the release of electrons from certain metals or semiconductors by the action of light. This area of research is particularly important to the Einstein myth because it was for this topic that he unjustly received his 1922 Nobel Prize.

But again, it is not Einstein, but Wilhelm Wien and Max Planck who deserve the credit. The main point of Einstein's paper, and the point for which he is given credit, is that light is emitted and absorbed in finite packets called quanta. This was the explanation for the photoelectric effect. The photoelectric effect had been explained by Heinrich Hertz in 1888. Hertz and others, including Philipp Lenard, worked on understanding this phenomenon. Lenard was the first to show that the energy of the electrons released in the photoelectric effect was not governed by the intensity of the light but by the frequency of the light. This was an important breakthrough.

Wien and Planck were colleagues and they were the fathers of modern day quantum theory. By 1900, Max Planck, based upon his and Wien's work, had shown that radiated energy was absorbed and emitted in finite units called quanta. The only difference in his work of 1900 and Einstein's work of 1905 was that Einstein limited himself to talking about one particular type of energy - light energy. But the principles and equations governing the process in general had been deduced by Planck in 1900. Einstein himself admitted that the obvious conclusion of Planck's work was that light also existed in discrete packets of energy. Thus, nothing in this paper of Einstein's was original.

After the 1905 papers of Einstein were published, the scientific community took little notice and Einstein continued his job at the patent office until 1909 when it was arranged for him to take a position at a school by World Jewry. Still, it was not until a 1919 newspaper headline that he gained any notoriety.

With Einstein's academic appointment in 1909, he was placed in a position where he could begin to use other people's work as his own more openly. He engaged many of his students to look for ways to prove the theories he had supposedly developed, or ways to apply those theories, and then he could present the research as his own or at least take partial credit. In this vein, in 1912, he began to try and express his gravitational research in terms of a new, recently developed calculus, which was conducive to understanding relativity. This was the beginning of his General Theory of Relativity, which he would publish in 1915. But the mathematical work was not done by

Einstein - he was incapable of it. Instead, it was performed by the mathematician Marcel Grossmann, who in turn used the mathematical principles developed by Berhard Riemann, who was the first to develop a sound non-Euclidean geometry, which is the basis of all mathematics used to describe relativity.

The General Theory of Relativity applied the principles of relativity to the universe; that is, to the gravitational pull of planets and their orbits, and the general principle that light rays bend as they pass by a massive object. Einstein published an initial paper in 1913 based upon the work which Grossmann did, adapting the math of Riemann to Relativity. But this paper was filled with errors and the conclusions were incorrect. It appears that Grossmann was not smart enough to figure it out for Einstein. So Einstein was forced to look elsewhere to plagiarize his General Theory. Einstein published his correct General Theory of Relativity in 1915, and said prior to its publication that he, "...completely succeeded in convincing Hilbert and Klein." He is referring to David Hilbert, perhaps the most brilliant mathematician of the 20th century, and Felix Klein, another mathematician who had been instrumental in the development of the area of calculus that Grossmann had used to develop the General Theory of Relativity for Einstein.

Einstein's statement regarding the two men would lead the reader to believe that Einstein had changed Hilbert's and Klein's opinions regarding General Relativity, and that he had influenced them in their thinking. However, the exact opposite is true. Einstein stole the majority of his General Relativity work from these two men, the rest being taken from Grossmann. Hilbert submitted for publication, a week before Einstein completed his work, a paper which contained the correct field equations of General Relativity. What this means is that Hilbert wrote basically the exact same paper, with the same conclusions, before Einstein did. Einstein would have had an opportunity to know of Hilbert's work all along, because there were Jewish friends of his working for Hilbert. Yet, even this was not necessary, for Einstein had seen Hilbert's paper in advance of publishing his own. Both of these papers were, before being printed, delivered in the form of a lecture.

Einstein presented his paper on November 25, 1915 in Berlin and Hilbert had presented his paper on November 20 in G&#65533;ttingen. On November 18, Hilbert received a letter from Einstein thanking him for sending him a draft of the treatise Hilbert was to deliver on the 20th. So, in fact, Hilbert had sent a copy of his work at least two weeks in advance to Einstein before either of the two men delivered their lectures, but Einstein did not send Hilbert an advance copy of his. Therefore, this serves as incontrovertible proof that Einstein quickly plagiarized the work and then presented it, hoping to beat Hilbert to the punch. Also, at the same time, Einstein publicly began to belittle Hilbert, even though in the previous summer he had praised him in an effort to get Hilbert to share his work with him. Hilbert

made the mistake of sending Einstein this draft copy, but still he delivered his work first.

Not only did Hilbert publish his work first, but it was of much higher quality than Einstein's. It is known today that there are many problems with assumptions made in Einstein's General Theory paper. We know today that Hilbert was much closer to the truth. Hilbert's paper is the forerunner of the unified field theory of gravitation and electromagnetism and of the work of Erwin Schr&#65533;dinger, whose work is the basis of all modern day quantum mechanics.

That the group of men discussed so far were the actual originators of the ideas claimed by Einstein was known by the scientific community all along. In 1940, a group of German physicists meeting in Austria declared that "before Einstein, Aryan scientists like Lorentz, Hasen&#65533;hrl, Poincar&#65533;, etc., had created the foundations of the theory of relativity..."

However, the Jewish media did not promote the work of these men. The Jewish media did not promote the work of David Hilbert, but instead they promoted the work of the Jew Albert Einstein. As we mentioned earlier, this General Theory, as postulated by Hilbert first and in plagiarized form by Einstein second, stated that light rays should bend when they pass by a massive object. In 1919, during the eclipse of the Sun, light from distant stars passing close to the Sun was observed to bend according to the theory. This evidence supported the General Theory of Relativity, and the Jewish-controlled media immediately seized upon the opportunity to prop up Einstein as a hero, at the expense of the true genius, David Hilbert.

On November 7th, 1919, the London Times ran an article, the headline of which proclaimed, "Revolution in science - New theory of the Universe - Newtonian ideas overthrown." This was the beginning of the force-feeding of the Einstein myth to the masses. In the following years, Einstein's earlier 1905 papers were propagandized and Einstein was heralded as the originator of all the ideas he had stolen. Because of this push by the Jewish media, in 1922, Einstein received the Nobel Prize for the work he had stolen in 1905 regarding the photoelectric effect.

The establishment of the Einstein farce between 1919 and 1922 was an important coup for world Zionism and Jewry. As soon as Einstein had been established as an idol to the popular masses of England and America, his image was promoted as the rare genius that he is erroneously believed to be today. As such, he immediately began his work as a tool for World Zionism. The masses bought into the idea that if someone was so brilliant as to change our fundamental understanding of the universe, then certainly we ought to listen to his opinions regarding political and social issues. This is exactly what World Jewry wanted to establish in its ongoing effort of social engineering. They certainly did not want someone like David Hilbert to be

recognized as rare genius. After all, this physicist had come from a strong German, Christian background. His grandfather's two middle names were 'F&#65533;rchtegott Leberecht' or 'Fear God, Live Right.' In August of 1934, the day before a vote was to be taken regarding installing Adolf Hitler as President of the Reich, Hilbert signed a proclamation in support of Adolf Hitler, along with other leading German scientists, that was published in the German newspapers. So the Jews certainly did not want David Hilbert receiving the credit he deserved.

The Jews did not want Max Planck receiving the credit he deserved either. This German's grandfather and great-grandfather had been important German theologians, and during World War II he would stay in Germany throughout the war, supporting his fatherland the best he could.

The Jews certainly did not want the up-and-coming Erwin Schr&#65533;dinger to be heralded as a genius to the masses. This Austrian physicist would go on to teach at Adolf Hitler University in Austria, and he wrote a public letter expressing his support for the Third Reich. This Austrian's work on the unified field theory was a forerunner of modern physics, even though it had been criticized by Einstein, who apparently could not understand it.

The Jews did not want to have Werner Heisenberg promoted as a rare genius, even though he would go on to solidify quantum theory and contribute to it greatly, as well as develop his famous uncertainty principle, in addition to describing the modern atom and nucleus and the binding energies that are essential to modern chemistry. No, the Jews did not want Heisenberg promoted as a genius because he would go on to head the German atomic bomb project and serve prison time after the war for his involvement with the Third Reich.

No, the Jews did not want to give credit to any of a number of white Germans, Austrians, Irishmen, Frenchmen, Scotsmen, Englishmen, and even Americans who had contributed to the body of knowledge and evidence from which Einstein plagiarized and stole his work. Instead, they needed to erect Einstein as their golden calf, even though he repeatedly and often embarrassed himself with his nonfactual or nearsighted comments regarding the work he had supposedly done. For example, in 1934, the Pittsburgh Post-Gazette ran a front page article in which Einstein gave an "emphatic denial" regarding the idea of practical applications for the "energy of the atom." The article says,

"But the 'energy of the atom' is something else again. If you believe that man will someday be able to harness this boundless energy-to drive a great steamship across the ocean on a pint of water, for instance-then, according to Einstein, you are wrong..."

Again, Einstein clearly did not understand the branch of physics he had supposedly founded, though elsewhere in the world at the time theoretical research was underway that would lead to the atomic bomb

and nuclear energy. But after Einstein was promoted as a god in 1919, he made no real attempts to plagiarize any other work. Rather, he began his real purpose - evangelizing for the cause of Zionism and World Jewry. Though he did publish other articles after this time, all of them were co-authored by at least one other person, and in each instance, Einstein had little if anything to do with the research that led to the articles; he was merely recruited by the co-authors in order to lend credence to their work. Thus freed of the pretense of academia, Einstein began his assault for World Zionism.

In 1921, Einstein made his first visit to the United States on a fund-raising tour for the Hebrew University in Jerusalem and to promote Zionism. In April of 1922, Einstein used his status to gain membership in a Commission of the League of Nations. In February of 1923, Einstein visits Tel Aviv and Jerusalem. In June of 1923, he becomes a founding member of the Association of Friends of the New Russia. In 1926, Einstein took a break from his Communist and Zionistic activities to again embarrass himself scientifically by criticizing the work of Schr&#65533;dinger and Heisenberg. Following a brief illness, he resumes his Zionistic agenda, wanting an independent Israel and at the same time a World Government.

In the 1930s he actively campaigns against all forms of war, although he would reverse this position during World War II when he advocated war against Germany and the creation of the atomic bomb, which he thought was impossible to build. In 1939 and 1940, Einstein, at the request of other Jews, wrote two letters to Roosevelt urging an American program to develop an atomic bomb to be used on Germany - not Japan. Einstein would have no part in the actual construction of the bomb, theoretical or practical, because he lacked the skills for either.

In December of 1946, Einstein rekindles his efforts for a World Government, with Israel apparently being the only autonomous nation. This push continues through the rest of the 1940s. In 1952, Einstein, who had been instrumental in the creation of the State of Israel, both politically and economically, is offered the presidency of Israel. He declines. In 1953, he spends his time attacking the McCarthy Committee, and he supports Communists such as J. Robert Oppenheimer. He encourages civil disobedience in response to the McCarthy trials. Finally, on April 18, 1955, this filthy Jewish demagogue dies.

Dead, the Jews no longer had to worry about Einstein making stupid statements. His death was just the beginning of his usage and exploitation by World Jewry. The Jewish-controlled media continued to promote the myth of this Super-Jew long after his death, and as more and more of the men who knew better died off, the Jews were more and more able to aggrandize his myth and lie more boldly. This brazen lying has culminated in the Jew controlled Time magazine naming Einstein "The Person of the Century" at the close of 1999. It may be demonstrated that the Jewish lies have become more bold with the

passage of time because Einstein was never named "Man of the Year" while he was alive, but now, over forty years after his death, he is named "Person of the Century."

Einstein was given this title in spite of the clear-cut choice for the "Person of the Century," Adolf Hitler. Hitler was indeed named "Man of the Year" while he was still living by Time magazine, and according to a December 27, 1999, article in the USA Today, Einstein was chosen over Adolf Hitler because of the perceived "nasty public relations fallout" that would accompany that choice; yet in internet polling by Time, Hitler finished third and was the top serious candidate. Still the issue of Time magazine dedicated to Einstein, which has articles by men with names like Isaacson, Golden, Stein, Rudenstine, and Rosenblatt, is interesting to read. For one, they found it necessary to include an article rationalizing why they did not pick the obvious choice, Adolf Hitler. But more interesting is the article by Stephen Hawking which purports to be a history of the theory of relativity. In it, Hawking admits many of the things in this article, such as the fact that Hilbert published the General Theory of Relativity before Einstein and that FitzGerald and Lorentz deduced the concept of relativity long before Einstein. Hawking also writes,

"Einstein...was deeply disturbed by the work of Werner Heisenberg in Copenhagen, Paul Dirac in Cambridge and Erwin Schr&#65533;dinger in Zurich, who developed a new picture of reality called quantum mechanics. ... Einstein was horrified by this ... Most scientists, however, accepted the validity of the new quantum laws because they showed excellent agreement with observations ... They are the basis of modern developments in chemistry, molecular biology and electronics and the foundation of the technology that has transformed the world in the past half-century."

This is all very true, yet the same magazine credits Einstein with all of the modern developments that Hawking names, even through Einstein was so stupid as to be vehemently against the most important idea of modern science, just as he opposed Schr&#65533;dinger's work in unified field theory which was far ahead of its time. The same magazine admits that "success eluded" Einstein in the field of explaining the contradictions between relativity and quantum mechanics. Today, these contradictions are explained by the unified field theory, but Einstein, who proves himself to be one of the least intelligent of 20th century scientists, refused to believe in either quantum theory or the unified field theory.

To name Einstein as "The Person of the Century" is one of the most ludicrous and absurd lies of all time, yet it has been successfully pulled off by Isaacson, Golden, Stein, Rudenstine, and Rosenblatt and the Jewish owners of Time magazine. If the Jews at Time wanted to give the title to an inventor or scientist, then the most obvious choice would have been men like Hilbert, Planck, or Heisenberg. If they wanted to give it to the scientist who most fundamentally changed the

landscape of 20th century science, then the obvious choice would be William Shockley. This Nobel prize winning scientist invented the transistor, which is the basis of all modern electronic devices and computers, everything from modern cars and telephones, VCRs and watches, to the amazing computers which have allowed incomprehensible advances in all fields of science. Without the transistor, all forms of science today would be basically in the same place that they were in the late 1940s.

However, the Jews cannot allow the due credit to go to William Shockley because he spent the majority of his scientific career demonstrating the genetic and mental inferiority of non-whites and arguing for their sterilization. His scientific, genetic views led the Jews to financially destroy Shockley who founded the first company in the Silicon Valley, his hometown, to develop computer chips. The Jews hired away his entire staff and used them to start Fairchild semiconductor, the company that today is known as Intel.

No the Jews could not let any of the truly great geniuses of our time be recognized, not the anti-Semite Henry Ford, not the great German scientists who helped the National Socialists in Germany, not Charles Lindbergh, who was sympathetic to National Socialist causes, and certainly not William Shockley, one of the most brilliant physicists and geneticists of our time. Instead, the Jews propped up the Zionist, Communist Albert Einstein who hated everything white.

After World War II, Einstein demonstrated his hatred of the White Race and of the Germans in particular in the following statements. He was asked what he thought about Germany and about re-educating the Germans after the war and said,

"The nation has been on the decline mentally and morally since 1870...Behind the Nazi party stands the German people, who elected Hitler after he had in his book and in his speeches made his shameful intentions clear beyond the possibility of misunderstanding. ... The Germans can be killed or constrained after the war, but they cannot be re-educated to a democratic way of thinking and acting..."

Oh Ye who paints with such a wide brush: Your right in that out of over 7000 stores nationwide your going to run into people who either a) haven't a clue or b) are new and still is learning. Has every employee at Autozone or PepBoys been an actual auto mechanic? Keep in mind also that over two thousand of the Radio Shack stores are privately owned Franchise stores of which mine is one. We are able to stock more items than the average company store simply because of available space. Additionally, as for having answers, out of eight employees at my store, Three are at least Juniors in electronics engineering at university, two others are extra class amateur radio operators, and two women that have been around it for years (my wife and my daughter). As for myself, 26 years as an Extra class(and very active) amateur radio operator, prior Navy communications tech, five years experience installing satellite systems, certified Hughes satellite system repair center, etc etc etc. So next time you start painting all of us with your broad brush, remember that there are some of us that do have answers, care about our customers, and are extremely proud of Radio Shack as a whole. Any other questions?

Well, call it what you like, but it is happening. They about HAVE to do
something because other ITU nations are complaining about it so as to comply
with the US's treaty obligations.

This one came from "CB Radio Resources". I got there by going thru Power
House's page.

Other sources are www.rainreport.com and www.arrl.net. To get to
"enforcement", I think
you have to click on "bulletins" and then click on "enforcement".

It's kind of like Ripley's--Believe it or not!

Jesse:

most of us are just bitching for fun... we all go to Rat Shack and will continue to do so. its a great franchise. some of the employees are really good, others are not... this is no different than anywhere else... staff is the toughest part of running a business.

> care about our customers, and are extremely proud of Radio Shack as a whole.

excellent! too bad you can't run them all.

> Proud Radio Shack Franchise Owner

as well you should be! don't take any of our whining too personally.

phil :)

Jesse:

> Any other questions?

actually... how is it owning a RS franchise? has business been getting better or worse? have you noticed a change in your types of customers? what is the most sold electronics components at your store? have you sold more radios since 9/11? any items in your store you do real well on if you sell? has corporate RS been helpful to you?

curious,
phil :)

OK,
We have been using vocal communications for eons. Because it is so old, should we abandon
talking because of its age? I am not saying that CW needs to be a part of the testing, but you are wrong about one thing.

One of the things an enemy goes after in wartime, or in terrorist acts is communications. On
9/11, not only did they take down the towers, but they took down TV, radio relay, cellphones,
police, fire, and Amateur repeaters. The modern "digital" modes have one fault; they rely upon
fixed plant. Take out that fixed plant, attack repeaters, satellites, and cellphone sites to create
confusion and breakdown in communications, military and civilian. The objective is to prevent
military commanders from directing their forces in the field and receiving information upon which
to base their responses. It prevents police from acting to restore order and fire companies from
responding to whatever other mischief the enemy, or terrorists, may do.

Not so much because it is necessary for testing, but CW DOES get thru where others fail. That's why I don't want it to die from neglect. It could be a vital link some day. Never say
"never"; after all, we were blissfully unaware prior to the morning of 9/11 that there was an
enemy that could penetrate our defenses and create the havoc that occurred that day.

While I DO understand and accept that CW is not necessarily needed for testing, I still don't understand the knee jerk reaction some people have to it. I didn't want to study it, either, but
once I got into it, I found out that it is actually fun. It is a music and a language all its own. I
have found that most people who did the regimen, studied the code, struggled past the 10 WPM "plateau", discovered they enjoyed it and remained hooked on it. There was/is a pleasant satisfaction to hear CW and be able to copy what is being said; I used to just sit
and listen to QSOs on CW, and it was just fun to do because I knew HOW to.

I am not going to howl and moan when CW goes away (maybe after next year's ITU meeting).
I just wonder if we are making a mistake having nothing to do with keeping ":riff raff" out. In

a generation or two, I wonder what the next thing people will want removed from the testing?
WAIT! Don't answer that!

Only 2% of the buisness? Try more like 15%...and that was in a smaller store
that I worked in. I really wouldn't notice it that much until I started
going over my month end reports when I was managing a store...but it does
stack up more than people would think.

Now, keep in mind, this would account for much more than just the electrical
components themselves, but also the project boxes, battery holders, wire
ties, and all the other little small electronic components sold in the
stores.

> more openly. He engaged many of his students to look for ways to prove
> the theories he had supposedly developed, or ways to apply those
> theories, and then he could present the research as his own or at
> least take partial credit. In this vein, in 1912, he began to try and
> express his gravitational research in terms of a new, recently
> developed calculus, which was conducive to understanding relativity.
> This was the beginning of his General Theory of Relativity, which he
> would publish in 1915. But the mathematical work was not done by
> Einstein - he was incapable of it. Instead, it was performed by the
> mathematician Marcel Grossmann, who in turn used the mathematical
> principles developed by Berhard Riemann, who was the first to develop
> a sound non-Euclidean geometry, which is the basis of all mathematics
> used to describe relativity.
>
> The General Theory of Relativity applied the principles of relativity
> to the universe; that is, to the gravitational pull of planets and
> their orbits, and the general principle that light rays bend as they
> pass by a massive object. Einstein published an initial paper in 1913
> based upon the work which Grossmann did, adapting the math of Riemann
> to Relativity. But this paper was filled with errors and the
> conclusions were incorrect. It appears that Grossmann was not smart
> enough to figure it out for Einstein. So Einstein was forced to look
> elsewhere to plagiarize his General Theory. Einstein published his
> correct General Theory of Relativity in 1915, and said prior to its
> publication that he, "...completely succeeded in convincing Hilbert
> and Klein." He is referring to David Hilbert, perhaps the most
> brilliant mathematician of the 20th century, and Felix Klein, another
> mathematician who had been instrumental in the development of the area
> of calculus that Grossmann had used to develop the General Theory of
> Relativity for Einstein.
>
> Einstein's statement regarding the two men would lead the reader to
> believe that Einstein had changed Hilbert's and Klein's opinions

> regarding General Relativity, and that he had influenced them in their
> thinking. However, the exact opposite is true. Einstein stole the
> majority of his General Relativity work from these two men, the rest
> being taken from Grossmann. Hilbert submitted for publication, a week
> before Einstein completed his work, a paper which contained the
> correct field equations of General Relativity. What this means is that
> Hilbert wrote basically the exact same paper, with the same
> conclusions, before Einstein did. Einstein would have had an
> opportunity to know of Hilbert's work all along, because there were
> Jewish friends of his working for Hilbert. Yet, even this was not
> necessary, for Einstein had seen Hilbert's paper in advance of
> publishing his own. Both of these papers were, before being printed,
> delivered in the form of a lecture.
>
> Einstein presented his paper on November 25, 1915 in Berlin and
> Hilbert had presented his paper on November 20 in G�ttingen. On
> November 18, Hilbert received a letter from Einstein thanking him for
> sending him a draft of the treatise Hilbert was to deliver on the
> 20th. So, in fact, Hilbert had sent a copy of his work at least two
> weeks in advance to Einstein before either of the two men delivered
> their lectures, but Einstein did not send Hilbert an advance copy of
> his. Therefore, this serves as incontrovertible proof that Einstein
> quickly plagiarized the work and then presented it, hoping to beat
> Hilbert to the punch. Also, at the same time, Einstein publicly began
> to belittle Hilbert, even though in the previous summer he had praised
> him in an effort to get Hilbert to share his work with him. Hilbert
> made the mistake of sending Einstein this draft copy, but still he
> delivered his work first.
>
> Not only did Hilbert publish his work first, but it was of much higher
> quality than Einstein's. It is known today that there are many
> problems with assumptions made in Einstein's General Theory paper. We
> know today that Hilbert was much closer to the truth. Hilbert's paper
> is the forerunner of the unified field theory of gravitation and
> electromagnetism and of the work of Erwin Schr�dinger, whose work is
> the basis of all modern day quantum mechanics.
>
> That the group of men discussed so far were the actual originators of
> the ideas claimed by Einstein was known by the scientific community
> all along. In 1940, a group of German physicists meeting in Austria
> declared that "before Einstein, Aryan scientists like Lorentz,
> Hasen�hrl, Poincar�, etc., had created the foundations of the theory
> of relativity..."
>
> However, the Jewish media did not promote the work of these men. The
> Jewish media did not promote the work of David Hilbert, but instead
> they promoted the work of the Jew Albert Einstein. As we mentioned
> earlier, this General Theory, as postulated by Hilbert first and in
> plagiarized form by Einstein second, stated that light rays should

> bend when they pass by a massive object. In 1919, during the eclipse
> of the Sun, light from distant stars passing close to the Sun was
> observed to bend according to the theory. This evidence supported the
> General Theory of Relativity, and the Jewish-controlled media
> immediately seized upon the opportunity to prop up Einstein as a hero,
> at the expense of the true genius, David Hilbert.
>
> On November 7th, 1919, the London Times ran an article, the headline
> of which proclaimed, "Revolution in science - New theory of the
> Universe - Newtonian ideas overthrown." This was the beginning of the
> force-feeding of the Einstein myth to the masses. In the following
> years, Einstein's earlier 1905 papers were propagandized and Einstein
> was heralded as the originator of all the ideas he had stolen. Because
> of this push by the Jewish media, in 1922, Einstein received the Nobel
> Prize for the work he had stolen in 1905 regarding the photoelectric
> effect.
>
> The establishment of the Einstein farce between 1919 and 1922 was an
> important coup for world Zionism and Jewry. As soon as Einstein had
> been established as an idol to the popular masses of England and
> America, his image was promoted as the rare genius that he is
> erroneously believed to be today. As such, he immediately began his
> work as a tool for World Zionism. The masses bought into the idea that
> if someone was so brilliant as to change our fundamental understanding
> of the universe, then certainly we ought to listen to his opinions
> regarding political and social issues. This is exactly what World
> Jewry wanted to establish in its ongoing effort of social engineering.
> They certainly did not want someone like David Hilbert to be
> recognized as rare genius. After all, this physicist had come from a
> strong German, Christian background. His grandfather's two middle
> names were 'F�rchtegott Leberecht' or 'Fear God, Live Right.' In
> August of 1934, the day before a vote was to be taken regarding
> installing Adolf Hitler as President of the Reich, Hilbert signed a
> proclamation in support of Adolf Hitler, along with other leading
> German scientists, that was published in the German newspapers. So the
> Jews certainly did not want David Hilbert receiving the credit he
> deserved.
>
> The Jews did not want Max Planck receiving the credit he deserved
> either. This German's grandfather and great-grandfather had been
> important German theologians, and during World War II he would stay in
> Germany throughout the war, supporting his fatherland the best he
> could.
>
> The Jews certainly did not want the up-and-coming Erwin Schr�dinger to
> be heralded as a genius to the masses. This Austrian physicist would
> go on to teach at Adolf Hitler University in Austria, and he wrote a
> public letter expressing his support for the Third Reich. This
> Austrian's work on the unified field theory was a forerunner of modern

> physics, even though it had been criticized by Einstein, who
> apparently could not understand it.
>
> The Jews did not want to have Werner Heisenberg promoted as a rare
> genius, even though he would go on to solidify quantum theory and
> contribute to it greatly, as well as develop his famous uncertainty
> principle, in addition to describing the modern atom and nucleus and
> the binding energies that are essential to modern chemistry. No, the
> Jews did not want Heisenberg promoted as a genius because he would go
> on to head the German atomic bomb project and serve prison time after
> the war for his involvement with the Third Reich.
>
> No, the Jews did not want to give credit to any of a number of white
> Germans, Austrians, Irishmen, Frenchmen, Scotsmen, Englishmen, and
> even Americans who had contributed to the body of knowledge and
> evidence from which Einstein plagiarized and stole his work. Instead,
> they needed to erect Einstein as their golden calf, even though he
> repeatedly and often embarrassed himself with his nonfactual or
> nearsighted comments regarding the work he had supposedly done. For
> example, in 1934, the Pittsburgh Post-Gazette ran a front page article
> in which Einstein gave an "emphatic denial" regarding the idea of
> practical applications for the "energy of the atom." The article says,
>
> "But the 'energy of the atom' is something else again. If you believe
> that man will someday be able to harness this boundless energy-to
> drive a great steamship across the ocean on a pint of water, for
> instance-then, according to Einstein, you are wrong..."
>
> Again, Einstein clearly did not understand the branch of physics he
> had supposedly founded, though elsewhere in the world at the time
> theoretical research was underway that would lead to the atomic bomb
> and nuclear energy. But after Einstein was promoted as a god in 1919,
> he made no real attempts to plagiarize any other work. Rather, he
> began his real purpose - evangelizing for the cause of Zionism and
> World Jewry. Though he did publish other articles after this time, all
> of them were co-authored by at least one other person, and in each
> instance, Einstein had little if anything to do with the research that
> led to the articles; he was merely recruited by the co-authors in
> order to lend credence to their work. Thus freed of the pretense of
> academia, Einstein began his assault for World Zionism.
>
> In 1921, Einstein made his first visit to the United States on a
> fund-raising tour for the Hebrew University in Jerusalem and to
> promote Zionism. In April of 1922, Einstein used his status to gain
> membership in a Commission of the League of Nations. In February of
> 1923, Einstein visits Tel Aviv and Jerusalem. In June of 1923, he
> becomes a founding member of the Association of Friends of the New
> Russia. In 1926, Einstein took a break from his Communist and
> Zionistic activities to again embarrass himself scientifically by

> criticizing the work of Schr&#65533;dinger and Heisenberg. Following a brief
> illness, he resumes his Zionistic agenda, wanting an independent
> Israel and at the same time a World Government.
>
> In the 1930s he actively campaigns against all forms of war, although
> he would reverse this position during World War II when he advocated
> war against Germany and the creation of the atomic bomb, which he
> thought was impossible to build. In 1939 and 1940, Einstein, at the
> request of other Jews, wrote two letters to Roosevelt urging an
> American program to develop an atomic bomb to be used on Germany - not
> Japan. Einstein would have no part in the actual construction of the
> bomb, theoretical or practical, because he lacked the skills for
> either.
>
> In December of 1946, Einstein rekindles his efforts for a World
> Government, with Israel apparently being the only autonomous nation.
> This push continues through the rest of the 1940s. In 1952, Einstein,
> who had been instrumental in the creation of the State of Israel, both
> politically and economically, is offered the presidency of Israel. He
> declines. In 1953, he spends his time attacking the McCarthy
> Committee, and he supports Communists such as J. Robert Oppenheimer.
> He encourages civil disobedience in response to the McCarthy trials.
> Finally, on April 18, 1955, this filthy Jewish demagogue dies.
>
> Dead, the Jews no longer had to worry about Einstein making stupid
> statements. His death was just the beginning of his usage and
> exploitation by World Jewry. The Jewish-controlled media continued to
> promote the myth of this Super-Jew long after his death, and as more
> and more of the men who knew better died off, the Jews were more and
> more able to aggrandize his myth and lie more boldly. This brazen
> lying has culminated in the Jew controlled Time magazine naming
> Einstein "The Person of the Century" at the close of 1999. It may be
> demonstrated that the Jewish lies have become more bold with the
> passage of time because Einstein was never named "Man of the Year"
> while he was alive, but now, over forty years after his death, he is
> named "Person of the Century."
>
> Einstein was given this title in spite of the clear-cut choice for the
> "Person of the Century," Adolf Hitler. Hitler was indeed named "Man of
> the Year" while he was still living by Time magazine, and according to
> a December 27, 1999, article in the USA Today, Einstein was chosen
> over Adolf Hitler because of the perceived "nasty public relations
> fallout" that would accompany that choice; yet in internet polling by
> Time, Hitler finished third and was the top serious candidate. Still
> the issue of Time magazine dedicated to Einstein, which has articles
> by men with names like Isaacson, Golden, Stein, Rudenstine, and
> Rosenblatt, is interesting to read. For one, they found it necessary
> to include an article rationalizing why they did not pick the obvious
> choice, Adolf Hitler. But more interesting is the article by Stephen

> Hawking which purports to be a history of the theory of relativity. In
> it, Hawking admits many of the things in this article, such as the
> fact that Hilbert published the General Theory of Relativity before
> Einstein and that FitzGerald and Lorentz deduced the concept of
> relativity long before Einstein. Hawking also writes,
>
> "Einstein...was deeply disturbed by the work of Werner Heisenberg in
> Copenhagen, Paul Dirac in Cambridge and Erwin Schr&#65533;dinger in Zurich,
> who developed a new picture of reality called quantum mechanics. ...
> Einstein was horrified by this ... Most scientists, however, accepted
> the validity of the new quantum laws because they showed excellent
> agreement with observations ... They are the basis of modern
> developments in chemistry, molecular biology and electronics and the
> foundation of the technology that has transformed the world in the
> past half-century."
>
> This is all very true, yet the same magazine credits Einstein with all
> of the modern developments that Hawking names, even through Einstein
> was so stupid as to be vehemently against the most important idea of
> modern science, just as he opposed Schr&#65533;dinger's work in unified field
> theory which was far ahead of its time. The same magazine admits that
> "success eluded" Einstein in the field of explaining the
> contradictions between relativity and quantum mechanics. Today, these
> contradictions are explained by the unified field theory, but
> Einstein, who proves himself to be one of the least intelligent of
> 20th century scientists, refused to believe in either quantum theory
> or the unified field theory.
>
> To name Einstein as "The Person of the Century" is one of the most
> ludicrous and absurd lies of all time, yet it has been successfully
> pulled off by Isaacson, Golden, Stein, Rudenstine, and Rosenblatt and
> the Jewish owners of Time magazine. If the Jews at Time wanted to give
> the title to an inventor or scientist, then the most obvious choice
> would have been men like Hilbert, Planck, or Heisenberg. If they
> wanted to give it to the scientist who most fundamentally changed the
> landscape of 20th century science, then the obvious choice would be
> William Shockley. This Nobel prize winning scientist invented the
> transistor, which is the basis of all modern electronic devices and
> computers, everything from modern cars and telephones, VCRs and
> watches, to the amazing computers which have allowed incomprehensible
> advances in all fields of science. Without the transistor, all forms
> of science today would be basically in the same place that they were
> in the late 1940s.
>
> However, the Jews cannot allow the due credit to go to William
> Shockley because he spent the majority of his scientific career
> demonstrating the genetic and mental inferiority of non-whites and
> arguing for their sterilization. His scientific, genetic views led the
> Jews to financially destroy Shockley who founded the first company in

> the Silicon Valley, his hometown, to develop computer chips. The Jews
> hired away his entire staff and used them to start Fairchild
> semiconductor, the company that today is known as Intel.
>
> No the Jews could not let any of the truly great geniuses of our time

A Father came home from a long business trip to find his
young son riding a brand new bike.

"Where did you get the money for that?" he asked.
"It must have cost over 300 dollars!"

"I earned it hiking," replied the boy.

"Hiking??? Come on son, tell your Dad the truth.
Nobody can make that sort of money hiking.
Where did you Really get the cash from?"

"It's like I say, Dad. Every night when you were gone, Mr
Burns from the bank would come over to see Mom.
He'd give me a 20 dollar bill and tell me to take a hike"!

Pfizer Corp (NYSE PFE) is making the announcement today that
Viagra will soon be available in liquid form and will be marketed by
Pepsi Cola Bottling Group (NYSE PBG) as a power beverage,
suitable for use as-is, or a mixer, under the name "Mount and Do."

Pepsi's proposed ad campaign suggests:
"It will now be possible for a man to literally pour himself a stiff one."

Fear God (Jesus Christ), and KEEP HIS Commandments; for THIS IS the DUTY of Man!---last few verses of Ecclesiasties. There are NO NEW ones since Jesus's time. What has the wicked to do with my statutes, says The Lord?

Bill Clinton should of been charged with SODOMY; then he would of been kicked out of office. There are statutes against what he did, and what the "good buddiies" do. But they wanted to leave him in. THE Judgment of God has already fallen in this nation, I fear that if WE DON'T REPENT, more is on it's way. SIN is what is ruining us, and the sooner we REPENT, the sooner we will be blessed again. Remember: It's NOT "God Bless America," but it better be "America Bless GOD" or we will be in worse shape in our Deut. 28 land!!!!!!!!!!!!!!!!!!!!!!!!
Dave!!

Hey, y'all.
Check out channel 27 am.
Saturday nights.

This ol' cracker callin' his self "Bluebird" loves to talk on the cb.

He sure do like to make threats to other operators -regardless.

Tellin' 'em that he gonna "kill" such and such if they dont gets off his channel.

He in Virginia near Keysville.

I hears him talkins to another cber.
I was laughin' till I shit in my drawers.

Whoo-hooo!!!!!!!!
Yeah, Buddy!!!

He need hims a "good buddy".

Au contrare!!!

I was told by a Shack employee, who just happen to be a hobbyist like
us, that RS will be getting out of the electronic component biz at the
end of this year.

I just snipped a ling essay about such, just like to say that Steve at
my local parts house, oughtta welcome the news. Been hanging on, as
the TV shops have died out this last decade, and It'd be great for him
to take up the slack! His stuff is better (and less expensive) than
Shack anyway..

3598. CB In Hong Kong

Newsgroup: rec.radio.cb
Date: 2002-01-27 20:54:15 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0201271254.3e3723a7@posting.google.com>
Source record: 113982

Came across this page at http://www.harts.org.hk/at1121.html

In 1995, Hong Kong's "FCC" wanted to open up CB service on 27 mhz. The country's equivalent of the ARRL responded with the paper below. Note their assessment of the value of a CB service (using the USA's CB service as an example).

No flame. Just interesting reading.

-Aaron-

RESPONSE TO CONSULTATIVE PAPER
PROPOSAL OF THE LEGALIZATION OF 27 MHz CITIZEN BAND PORTABLE AND MOBILE RADIOS ON LAND OFFICE OF THE TELECOMMUNICATIONS AUTHORITY
HONG KONG
OCTOBER, 1995

HONGKONG AMATEUR RADIO TRANSMITTING SOCIETY
NOVEMBER 23, 1995

The Hong Kong Amateur Radio Transmitting Society (HARTS) is the sole representative of the Amateur Radio Service in Hong Kong recognized by the International Amateur Radio Union. As such, HARTS hereby registers its emphatic objection to the proposal by OFTA to allow unlicensed use of 27 MHz, on the following grounds:

1. The basic premise as to why CB has been prohibited to date, and the rationale as to why it should now be permitted, are fatally flawed.

The only reason stated by the paper for the imposition of a ban on CB radio is the prevention of interference to television reception. But calculation, tests, and engineering common sense all lead to the conclusion that interference from legally-operated 27 MHz low-power transmitters to properly-installed UHF television receivers would be unusual, except in the case of extreme proximity.

This question could have been easily resolved at any time in the past twenty-five years. Therefore, if OFTA's contention is accurate; that potential TV interference was the only reason for the ban; then the lack of action by OFTA and its predecessor at the Post Office is responsible for the widespread illegal use of various parts of the spectrum, and the interference resulting therefrom.
We believe the opposite: that CB-TVI was not the sole reason CB was never authorized. There are a great many other factors that led to

that decision, and that a favorable analysis of the potential for CB-TVI is not a sufficient basis for OFTA's proposal. Those other factors still exist, although they are ignored by OFTA and RSAC. They are discussed briefly here, to the extent possible in the short response time given to us.

2. OFTA/RSAC has failed to consider other, more likely types of interference than CB to TV.

On a strictly technical basis, 27 MHz CB to UHF television is one of the less likely types of interference to occur, due to frequency separation. Apparently the government has not studied, either by test or calculation, potential interference to the amateur, land mobile, public and safety, FM broadcast, and aeronautical navigation and communication services, all of which have far less frequency separation from CB and usually far lower effective radiated power than television. There is no valid technicalbasis for a blanket exclusion of such potential interference. Either the work necessary to address all valid interference issues has not yet been done, or the results of that work have been omitted from the proposal.

3. OFTA/RSAC has alluded to the use of CB in other countries, but has not considered or disclosed the negative aspects of such use.

As noted by OFTA, CB is widely used in several countries. However, in the USA at least and undoubtedly elsewhere, the Citizen Band is home to many forms of widespread unacceptable practice, such as:

* Facilitation of criminal acts
* Evasion of law enforcement
* Prohibited international communication
* Offensive and obscene language and anti-social behavior
* Use of unauthorized frequencies, power, and equipment

Given the history elsewhere, it is inexplicable that OFTA/RSAC should assume unlicensed users of 27 MHz CB will conform to any rules set forth in Hong Kong. In fact, it is reasonable to predict that Hong Kong CB use will be even more illicit than elsewhere, since such behavior is already common on VHF and UHF.
OFTA implicitly agrees with this assessment. Its often-stated policy is that legal use of a frequency will attract illegal users. OFTA, in its regular liaison meetings with amateur radio organizations, regularly uses this argument to deny amateurs FM voice operation in the 432 MHz band. It cannot reasonably maintain that position while denying that CB will become a magnet for all forms of illegal use.

OFTA has a responsibility to estimate the administrative workload caused by any of its proposals. By mentioning only the workload to be avoided by not licensing users, OFTA/RSAC deliberately omits the major negative impact CB will have on enforcement resources. Or is it possible that OFTA plans no enforcement activities on 27 MHz or on the other frequencies that will be impacted?

4. Potential interference from illegal use must be considered.

The 27 MHz Citizen Band is a favorite refuge of people using unauthorized frequencies, power, and equipment. Such equipment, including external amplifiers with unproven spectral purity, is now widely available in Hong Kong. It is naive and irresponsible to consider only legal use when evaluating the interference potential of this proposal. OFTA/RSAC must consider the possibility of all likely modes of operation, legal or otherwise, causing interference to all near-adjacent or harmonically-related telecommunications services.
5. The proposal will not reduce the illegal use of VHF and UHF.

OFTA/RSAC speculatesthat implementation of this proposal will relieve demand for additional open channels and that current illegal users will be somehow enticed to abandon their present equipment in favor of 27 MHz. Regrettably, OFTA offers not a shred of evidence to indicate that either result is likely.

CB equipment on 27 MHz does not employ attractive or reliable technology. It is subject to frequent interference from skywave propagation; repeaters are not practical; antennas must be larger than for VHF/UHF; closed access (PL or CTCSS) is not possible; and, the equipment is not significantly less expensive than for VHF and UHF.

A migration of illegal users can only be maintained by a "carrot and stick" approach. The incentive is suitable channels that are made available for the user; the disincentive is a significant possibility that continued illegal use will result in apprehension, successful prosecution, and meaningful punishment. CB on 27 MHz is a sorry "carrot" compared to the facilities already taken over by the illegal users. Furthermore, illegal users and the dealers who service them know fully that their chance of ever being caught and punished for their illegal use are virtually nil. OFTA's "stick" is too small, it is wielded ineffectively, and neither the judiciary nor the police take it seriously.
Dealers have a vested interest in maintaining their massive, undisturbed sales to illegal users. It is extremely unlikely that they will do anything to curb such sales of VHF/UHF equipment. Of course, they would likely support this proposal, since they would gain additional sales of legal and illegal CB equipment.

If OFTA wishes to support its contention that CB will reduce illegal VHF/UHF use, then it should document how much the cited 40% occupancy of the open channels (by legal, licensed users, of course!) has already reduced such behavior.

6. OFTA has failed to consider the international implications for the proposal.
Any high frequency allocation should be coordinated with other countries in the region (Asia), if not required by law, then at least as a courtesy. This principle is doubly important with the near certainty that obscenity, unauthorized frequencies and power,

uncontrolled spurious emissions, and unlawful behavior will be common. Has anyone been consulted on this issue? Has China been consulted on the effects of creating and promoting such a user base on post-1997 government operations? What will be the likely effect upon Hong Kong's image of such behavior spreading through the ionosphere over Asia? These issues are not addressed in the OFTA/RSAC proposal, nor is there any indication that they have been considered at all.

7. OFTA/RSAC has not demonstrated need for this service.
We believe that OFTA/RSAC has confused demand with need. It is very easy to make a showing of demand by offering to givesomething to people with no strings attached, and no obvious negative effects (i.e. cost, regulation,) to them. Who would vote to subject themselves to regulation or cost? Such showing does notdemonstrate need, which we define as an overriding public interest.
We contend that there is no need for an unlicensed public mobile-to-mobile service. The factors that led other countries to consider such service are, to a large extent, absent in Hong Kong. OFTA has already taken steps to ensure that adequate spectrum is allocated for public mobile use. Hong Kong enjoys nearly full territorial coverage by the several public mobile system operators. There are no long, desolate roads that call for emergency road communications not already accommodated by presently available mobile phones. The market penetration of mobile phones of all types demonstrates that all those who need such a service are willing to pay for it. Is that not the Hong Kong way?
A small business does need a measure of reliability, which is achieved by the use of appropriate technology and the rule of law, both of which are absent on 27 MHz CB. Such users should be willing to pay for the right to use spectrum commercially, and to submit to such modest measures as applying for a license. There is no public needto satisfy this "demand" at no cost to the user. Doing so renders meaningless OFTA's expensive and extensive study in spectrum pricing mechanisms - which recommends that such mechanisms be used to ensure efficient spectrum use and to recover OFTA's costs for the service in question. There is also a moral aspect to this issue. OFTA, having failed to control effectively illegal use of the spectrum, now seeks to resolve the issue by declaring such behavior legal (albeit on a different frequency). The message given to the public by this proposal is that unlawful radio behavior will, when it becomes sufficiently pervasive, be rewarded with an allocation of spectrum. We respectfully suggest that this message, which is unstated but abundantly clear, is counterproductive to proper spectrum management and public law and order.

8. OFTA will have neither the resources nor the legal means to effectively enforce any rules it promulgates for CB.

In our regular discussions about the rampant interference caused by illegal use of VHF and UHF, OFTA often describes the difficulties it encounters in enforcing the law. Its number of successful prosecutions

is now too small to act as a meaningful deterrent. The typical penalties assessed are too small to be meaningful. It has neither the manpower nor the equipment to successfully apprehend illegal mobile and portable stations in significant quantities. The burden of proof, and the standards of admissible evidence, either on the basis of possession or use, is too high to for OFTA to be effective.
Even OFTA's Director-General has publicly stated, in the case of Internet Service Providers, the need for a (PNETS) license that can be withdrawn in the case of unscrupulous behavior. How can OFTA, on the other hand, maintain that licenses are not required to regulate behavior and identify parties on CB - where users may have no established office or physical facility, telephone lines, or business registration?

All these factors have been acknowledged and in fact advanced by OFTA as contributing to the current sorry state of affairs. Yet astonishingly, OFTA/RSAC proposes a new service certain to aggravate each and every one of these points. Legally and logistically, how does OFTA intend to enforce the law effectively on 27 MHz in the future when it has been unable to do so now?

9. OFTA/RSAC's drafting and consultation process for this proposal is flawed.
If RSAC failed to consider the issues raised by our comments so far, then it was either improperly instructed; it is inappropriately constituted; or it has simply not done its job. Far too many issues have been left unaddressed to conclude otherwise.

We are told that only the taxi driver associations were included on the consultation list. Why were other potential interferees not included? Even if OFTA/RSAC's considered technical position had been correct (that only CB-TV interference need be evaluated), why were the TV broadcasters not consulted to see if they agree with the results of the tests? The mistakes made during consideration of CB use on fishing vessels have been repeated here, which leads us to believe that the deficiency is structural. OFTA has consulted only with groups that have a vested interest in approval of the proposal. It is quite by accident that we learned of this.

Summary
If a specific need or a valid use is identified, then an appropriate technical solution should be proposed. The OFTA/RSAC CB proposal meets neither of those criteria. If there are insufficient channels for taxi drivers, then channels should be allocated that are compatible with their present equipment and practice, with the intention of licensed use. If the same situation exists for trucks, the same solution should be applied. To propose 27 MHz as a solution to either situation is either hopelessly naive, or an exercise to deflect criticism by being seen to take some action (any action). Neither should be considered good governance.

Lest you think our positions are the isolated opinions of a few individuals, please examine the results of a poll of members attending our last meeting:

1. Many dealers in Hong Kong now sell 27 MHz transceivers that can operate on illegal frequencies and illegal 27 MHz amplifiers. TRUE: 63 FALSE: 2

2. OFTA has done an effective job preventing illegal sales by radio dealers. TRUE: 1 FALSE: 65

3. OFTA has done an effective job stopping illegal operation on amateur frequencies. TRUE: 1 FALSE: 65

4. If OFTA authorizes unlicensed 27 MHz CB operation, it will be able to prevent operation on illegal frequencies and with excessive power. TRUE: 4 FALSE: 62

5. If OFTA authorizes unlicensed 27 MHz operation, the problem of illegal operators in the amateur bands will be reduced. TRUE: 11 FALSE: 55

6. The use of illegal frequencies and power by new CB operators will be rare. TRUE: 9 FALSE: 57

7. I support OFTA's proposal to allow unlicensed mobile operation on 27 MHz. TRUE: 22 FALSE: 44

Please be mindful that this was a poll of licensed amateur radio operators; active spectrum users who have each individually passed rigorous examinations, and who, by law, have no financial interest in their spectrum use. The results should therefore be considered with the utmost gravity. These people know the OFTA proposal will not work.

HARTS is certainly willing and able to work with OFTA at any time to resolve these issues in a manner that benefits the community at large. However, should the proposal move forward in its present form, HARTS will continue to oppose it to the maximum extent possible.

here in British Columbia. I was told by the owner they were too. gettingout
of the electronic parts buisness. Everyday I see less and less parts.
Luckily I am now distributing hard to find electronic parts and common
electronic parts. Atleast someone has a place to turn to. Why pay almost 1
buck for a 10 cent capacitor.

It's actually a pretty good insight, albeit one made tongue-in-cheek.

The reversion to primitive society (and the corresponding
mystification of science) is a theme that's been explored in
literature many times. LORD OF THE FLIES by Wm Golding is the classic
example.

If you think of "CB Techs" as a bunch of competing "Witch Doctors" a
lot of things suddenly become very clear. Ask yourself "What do witch
doctors fear, above all?".

Hey there. I have been scanning for some years now and decided to try my hand at CB's. I just picked up a PC68XL and need to run SWR on it to match it with my really old Wilson "Lil Will" My question is what SWR meter should I get (Radio Shack etc) and should I upgrade to a Wilson 1000. This is going into my station wagon so I would like to have a decent antenna.

Thanks
Greg

Well i would like to say, i wish we had Radio Shack's such as your's here. I only knew of one franchised Radio Shack here in CO and he closed shop about 6 years ago and was about 30 miles from here. Nice guy though, wish he was still around, and no i do understand that not everyone there is going to be knowlegable, but around here, and im not being sarcastic, i havent found one radio shack that anyone there had a clue about anything they sold other than Cell phone's. To me, thats sad. I used to spend hours when i was younger, roaming around the radio shacks, after school on Mondays and Tuesdays they did stocking and i was able to help out there... So its not that i hate them, i just wish they were a little more like their ad's around here. RadioShack.Com stores are MUCH different, the people there usualy are fairly knowlegable or can find someone who can help you, unfortunatly they are closing that store down as quickly as Tech America disapeared heh.

And as for "Painting" im sorry i generalized there, but im serious when i say Colorado radio shacks are nearly worthless unless its stocked, and you know what and where it is. I still think they are rediculas when it comes to replacement components for scanners, etc. I spend 12 bucks on a stupid transformer (Audio) in a pro-2006, 5 bucks for a transistor in the same scanner and 35 for a EL replacement. the EL used to be like 10 bucks. I can understand those being pricing since they are scarse now, but come on.. a transistor and transformer that they probably still use any numerious products, priced that high is beyond me. I will say that i've never had a bad experience as far as employee's go, they are fairly nice people on most occasions :)

And if you ever deside to move to CO, let me know, i would much rather visit your store..

WHO made the best 4 pin mic plug for CB ?
I vote for Vanco. Made in Japan. 70's or early 80's. CBC4M I think. It had plastic inserts so you didn't have to use tape to cover the wires or solder when done. WAS there one better?
Dave!!!!!!!!!!!!!!!!

Randy:
Can you imagine the HATE that a few lousy Hams have for THE Citizens (people's) band? What kind of demented mind would be trying to look this stuff up? Maybe he'll come across one soon as to why the USSR did the same thing! AND Cuba, & N. Korea! He LOVES them all! (because they all believe in & practice the 6th plank)!
HEY BOOB--I may have sold an export CB to a old lady with a thick eastern european accent that sent it to Hungary or some other eastern country like that in the early 80's! Did I break your pinko commie law then, or was I a GOOD American aiding the "freedom fighters?" !
Dave!!!!!!!!!!!!!!!!!!

I remember the Cobra units to be pieces of JUNK; the Craig unit is rare and
will be worth some $$$$ later on! I can't remember ever seeing one!

Are you talking about a Phone looking CB or one that has AM/FM on it too in
a phone version, which they didn't make I don't think!
Dave!

Heh. KC8JBO OWNS you, TexASS TURD.

Anonymous coward and all-around fuckwit
"Stagger Lee" <SLee@houston-hunks.com>
revealed what a hypocrite he is and ironically admits he has no credibility
in message
<3C36FDCC.76EC185D@houston-hunks.com> :

"Therefore, I find your story difficult to believe. Your own anonymous
status makes the story even less credible."

Faggot Stagger Lee, who fails to "grasp" the concept that "slander" is
spoken and "libel" is written, would be better served if he just stuck
to grasping nutsacks, incoherently babbled
in <3C4AE592.6A0CDA7E@houston-hunks.com>:

"COTSE seemed to have the laughable notion that what Wiseman was doing
was exercising freedom of speech. Slander is of course not protected
speech in the US, but the concept that even free speech has its limits
seemed to be impossible for Steve Gielda -- COTSE's owner -- to grasp."

> to many forms of widespread unacceptable practice, such as:
>
> * Facilitation of criminal acts

What does he mean by this? Use of CB by "Lot Lizzards"
(Prostitutes)? Or does he mean by foreign NYC cab drivers?! Or what?

> * Evasion of law enforcement

Do they even have any BIG ROADS in Hong Kong that they can talk
about the "bears" on? OH--on the road to China---Breaker-Breaker, Red
(commy) bear passing Yellow (formerly FREE) bear @ mile marker #1 !

> * Prohibited international communication

What do the commies want to "prohibit" here? I am serious! What
do they mean?
Do they mean that it will go against the INTERNATIONAL communists wishes?

> * Offensive and obscene language and anti-social behavior

Now they got SOME of us here. This would be a GOOD excuse as to NOT
let the Internet into Hong Kong too! Would they judge Hong Kong TV the same
way, or is it communist approved "obscene and anti-social" on the tube, but
YOU can't practice it?

> * Use of unauthorized frequencies, power, and equipment

Not central party approved, of course!
But if the CB's were made in Red China (Northstar, Voyager, Connex 3300)
then is it OK?!
>

Boy, that's the truth. There isn't a Radio Shack employee anywhere, I'd bet, with any knowledge of what the name represents, or what a real parts house is. Damn shame. Once a good name, Tandy pretty much ruined it when he bought it, but the JC Penny approach to "electronics" is sad. Thankfully I still have a couple of parts houses, and a Frys here in Austin. But Tandy has been aiming for lowest common for years, and got there finally.

Their slogan would be much more accurate if it was:

"You've got questions?...We've got blank stares"

The CB service in the USA 2002 HAS still a LOT of value! Saves you BIG $$$$ from your pocket going to BEARS and cities & counties, who want to charge you for going FAST in your vehicle! THIS ALONE gives CB more value than ALL the Ham bands put together! Now I know you Hams will say that some ham bands DO have some value. I may agree with you. BUT CB is most useful to us POOR Citizens to help us from the UnConstitutional tyranny of the insurance industry's regulations!!!!!

I've lived all over the state, if you look in out phonebook there are a number of electronics shops all over the state, in the "Big City" as you call it and out on the plains. Sure they are less common the further you go into the country, but i've never had much of a hard time finding parts no matter where i lived. Either way, i see your point and the irritance level but if i needed parts or did alot of work, i would purchase at least $100 worth of parts that are fairly common from MCM Electronics or any number of other stores online. And yes before anyone asks, there are parts you can't get because its either A: not in stock or B: not a stocked part. So i have had to order stuff online and spend a little extra, but at least i have my parts. I dont always have to order online if i cant find it, generally the shop/store will order ir for me and i only pay the normal rate and no S&H or minimum ammounts. Guess i would be a little spoiled being here in the "Burbs" heh, but i do have friends who live in the mountains and they drive a couple hours for parts so i do know what you are talking about and understand.

73's and hopefully you will get a local parts house other than radio shack because i KNOW they cant/wont/dont stock or even carry everything you need :)

Hello Arron: Great posting!!!!!

I have printed out your posting here and put it just below all the QSL Cards I have from Honk Kong, and I have quit a few! Maybe there worth something now $$$$$$$$$$.........

The Radio Room has a few QSL Cards, on each wall. Alaska, Japan, South Africa, Hong Kong, and others.

Good going!!!

No, I said,

>...You can
>coil it around the mast, but do it at the base of the antenna, not the
>base of the mast.

That's a little different than "wrap it around the mast: bottom line".
It's called a conditional statement.

>I called on you to prove your post first. Of course, running away from
>the challenge is indicative of someone who can't debate the point, or is
>WRONG.

Whose running? And what challenge? It's amazing that we are in
agreement about this subject but you still want to argue it. Oh,
that's right, you said I suggested a specific number of turns but then
I showed you I didn't and you were proven wrong, now you are trying to
save face. Ok, Toll.

>Since you didn't provide the reference asked for, we will have to assume
>your
>WRONG.

You didn't ask for a reference. But you still haven't referenced where
running the coax inside the mast will distort the radiation pattern!

>> >> >You told him the amount of turns,
>> >>
>> >> I did no such thing, Toll. When are you going to learn to read?

>>
>> Yep, that's what I said. Notice I didn't say anything about turns.
>
>
>No, but you led him to believe something that wasn't true.

What's not true about what I said? Running the coax inside a steel
mast will -most definately- decouple the shield, even better than
wrapping it around a hundred coffee cans! It 'shields' the shield, and
any RF is absorbed by the ferrous nature of the pipe. It's a fact,
it's used in many practical applications. And no, I didn't read it in
a book, I learned it from real-life experience, as you are so familiar
with.

>Its a "bird watts" thing Sparky. Would it be the same number of turns? A
>different
>number of turns?

If you are making an RF choke, the number of turns isn't critical
because it's not a tuned circuit. But you already knew that, and I
already reiterated it.

>Is it PEP or AVG Bird watts?
>
>Same thing. you better start getting your posts as exact as you hold

>methods to him than the original asked, otherwise you end up with someone
>who doesn't have a complete set of instructions to complete the project at
>hand.
>
>As an Engineer, you should KNOW that!

HA! That's funny! If you were going to provide specifics, then why
didn't you mention the coffee can in your first post in this thread?
Instead you suggested using steel wool, which makes a terrible choke,
and a bad choice for an outdoor installation!

I answered the OP's question by providing several options. If he
wanted or needed more specific information on any one of these I'm
sure he would have asked. You, on the other hand, were just adding
crap in order to troll my posts. And it wasn't even accurate or useful
crap; it was just crap.

>
>YOU are the one who spews what happens in a book. I tell people what has
>been found by reading, as well as going out and DOING it.

You tell people what you want, truth or not, just as long as you think
it will convince them that you are some kind of super-tech. But the
-truth- is that you are just a wannabe that doesn't understand half of
what you are pushing off on others. You claim that everything I say
comes out of a book, yet you whine when I don't provide a reference
that you didn't ask for. Or tell someone to use steel wool for a choke

because it was in a -book- and it's obvious that you have never had any experience with rust. That's hypocritical, Toll. And you are wrong once again: A lot of what I have to say -doesn't- come from the books, a lot of it comes from experience. That experience comes from years and years in the classroom, the lab, the field, and in my own shop. And my experience has shown me that books are usually good representations of what really happens. Why is that? Because they were written based on the same kind of experience that I have gained over the years. They were written using information provided by technicians and engineers that have worked in the field since radio was invented. These 'books' that you so hate are the combined education and experience of all these people that have learned what they did through both formal education, practical experience, and trial & error. Do you honestly think that nobody ever experimented with different ideas? Or pushed the envelope of practical application? Of course they did, and they will continue to do so. Most will do it responsibly. They will respect the lessons already learned, and they will learn those lessons through books and formal education, and they will supplement that learning with practical experience. They will learn the proper language and terminology so others can understand and duplicate their work. But you are not one of those people, Toll. You just want big power with little effort and no responsibility. You don't even compare to a real tech. You think you contribute to the radio community with your amps and 'bird watts', but you don't. You are just pushing away everything that has been learned and setting the radio field back into the dark ages.

>Tell me. when you parallel two 1/4 wave antennas, spaced a quarter wave
>apart,
>both of them tuned individually for 1:1 swr, what happens?
>
>Not using a matching network, but just adding a T, using 50 ohm coaxial
>cable?

Where are these mounted? On a vehicle? What's the input impedance to each antenna with and without the other antenna mounted? Is the spacing the actual distance between the antennas or is it the electrical length of the coax? What is the electrical length of the coax? Where is the tee located along this coax? Are the antennas in-phase or reverse-phased? Was the SWR checked with the other antenna mounted? attached to a coax? Was the non-active antenna loaded or open-circuit?

>> >> >B. Most people on CB are using wider radio transmistters, due to

>No, what I was trying to say was that you don't always get to use USB and
>LSB
>on the same frequency in common practice. That's all. YOU started in with
>the rest,
>that I was saying SSB was more inferior, et al.

Ok, let's review:

>A. Most people on CB radio are using inferior radios, that DON'T have the
>filtration necessary to accomodate this

I believe this was addressed. SSB uses much better filters than are
used for AM, and the point of SSB filters is to eliminate the other
sideband. If the filter is capable of eliminating the sideband on
transmit, you can bet it can do it with receive, too. And it does.

>B. Most people on CB are using wider radio transmistters, due to defeating
>or cranking up ALC.

And that is their problem for modifying their radio when it shouldn't
be modified. Regardless, those mods have no effect on the SSB filter.
But when others modify their radios like that it can cause a wider
signal to be transmitted (the harmonics generated past the SSB
filter), interfering with the reception of others.

>C. Quite a few people on CB insist of using "half channels" or 5Kc drops to
>escape the rest.

And again, an improper modification. There is also the practice of
'locking' the clarifier, which some claim to give an advantage. It
does not, because it shifts the transmit frequency into another
sideband or channel. Use of the clarifier (or BFO) is, and should be,
limited to receive only. When it is, it works fine, and both sidebands
can indeed be used on the same channel.

>ALL I was saying was that in common use, your statements don't always hold
>up. You
>where quoting textbook theory, when in fact, it doesn't ALWAYS work under
>real world
>conditions.

When 'common use' and 'real world conditions' describe a band clogged
with improperly (i.e, illegally) modified radios, I agree, and I
agreed with it before. I also provided the 'real world' condition that
when you can't get through on one sideband or channel the operator can
exercise the 'common use' practice of changing the channel. And with
SSB there are twice as many places to change it to. Fact.

I wouldn't call Spokane a 'major metropolitan area', but the city
government has enough corruption for a major city. I am not primarily
a CB shop. In fact, I don't even make money from CB repairs because
most are cheaper to replace than repair. Those usually get tossed in
the corner, which now has a couple hundred radios piled up in it and
I'm tossing them out in the garbage. Need any parts?

That depends on your definition of a 'noise'. If a sound must be heard
in order for it to be a 'noise', then no, it makes no noise at all.
That's a very old lesson in semantics, and I'm suprised you even
brought it up. I really should put a spin on that like you do: What do
trees falling have to do with SSB? But, unlike you, I can comprehend
your point. You failed to realize that the standard for CB radio is
for the channels to be centered on specific frequencies, and NOT to be
slid 5kHz up or down.

>When that happens, just change the channel. It ain't
>> that difficult. BTW, the channels are spaced 10 - 20kHz apart.

>
>
>No. I am friends with the majority of CB operators in the greater San Diego
>area.

HA! Now THAT'S rich! Let's do the math: There are 6 billion people in the world, but we can trim that by 25% because China and some other overpopulated, underdeveloped countries don't have much in the way of CB radio. According to Jay there are 12 million CBers. So that means one out of every 375 people is a CBer. Ok? Now the population of San Diego is almost 2 million, and a conservative estimate of the surrounding area would add another million to that (you did say "the greater Sand Diego area", didn't you?). So that means that there are at least 8000 CBers in the greater San Diego area. Ok? Now a majority, in the most conservative calculation, is greater than half; or, in this case, more than 4000 CBers. And these are all your friends? Wow, Toll, I had no idea that you were so popular! And you know exactly just how many of them have SSB capable radios? Damn, did you take a memory course or something? Or do you have all these friends in your database? Well, whether using a great memory or a database, I'm sure you can list these friends, can't you? After all, they are your friends, right? So let's see the list? Hell, I won't even hold you to 4000, just list a thousand or so, then I'll contact them and see if they know who Toll Free is. How about it, Toll?

>
>
>My "keydown clique"...? Please provide proof that most of the people I deal
>with
>are involved in keydowns now?

Actually, I had no idea you had SO MANY friends, and I don't suppose
most of those 4000+ friends attend keydowns, so I'll withdraw that
statement.

>And yes, most of the people I know use the 8719 chassis from Uniden. An SSB
>capable
>chassis.

So you know 2000+ people with an 8719 chassis? That's interesting,
since the 8719 (or, more specifically, the MB8719) is a PLL chip, not
a chassis. But then I had no idea that the MB8719 could only be used
by uniden, and then only for an SSB radio. How many of all those SSB
capable radios use a different PLL or other method of frequency
control?

> Please disprove this, or keep your assinine comments to yourself.

I just did. Now prove that SSB isn't any better than AM. Prove that
running coax inside the mast distorts the field. Prove that...

...fuck this. Go practice your voodoo.

There is nothing to clear up. PEP can be measured as RMS or peak, but
common practice is to measure power output as RMS, and DC input as
peak. That's what that whole thread was about -- people's misuse of
terminology and loosly defined slang such as 'bird watts'.

Well, I'll need an authoritative reference for your claim that you can
self-bias a grounded emitter Class C amp into Class B or AB simply by
overdriving it, because your last reference contradicted your claim.

>Of course, I am SURE you are going to argue this point.

Of course I will because you are wrong.

> Save yourself the

References. You were the one whining about not providing references,
now put up or shut up.

> I won't reply to any argument you put up because
>it either isn't worth it, you will debate terms instead of the topic, or you
>just choose not to reply when you get pushed into a corner.

No, you won't reply because you can't provide any proof, reference, or
technical explanation of your claim, so you use a typical duck-out
line and drop the thread. But if you ever change your mind and decide
to respond anyway it will only be to spin away from the issue. You are
showing your true colors, Toll.

Spin. Just as I thought.

>Again, does the BE junction of a common base transistor have ANY
>rectification properties?

Of course it does. The BE needs to be forward biased for the
transistor to work, and for a ground-bias amp that happens when the
signal exceeds the BE bias potential, i.e, 0.65V. That's basics. But
you, like the prof, don't seem to understand that the signal BELOW
0.65V isn't getting amplified! That makes it a Class C amp no matter
how much you overdrive it!!! Brian finally learned this, but you still
can't figure it out? I guess all that 'real world' learning only goes
so far, huh?

>in this newsgroup, etc., etc., etc.

That's why I quoted several posts over the years to show the
non-uniformity of the use of the term. A couple of those posts were
yours, don't forget. It's a floating point of reference.

>> BTW, when you run your transistor into saturation or beyond, what
>> happens? It isn't really an amp anymore, it's more like a switch,
>> isn't it?
>
>
>The flywheel effect will allow RF to be transmitted as well.

The 'flywheel effect' is only applicable where a tuned, high-Q output
tank is used. Wideband amps, by definition, don't have a 'flywheel
effect'. And another point, your 'flywheel' is not going to restore
linearity to a signal distorted by non-linear amplification. You
really need to do a little studying on the subject.

> What about
>Class E amplifiers? They don't run into saturation? They don't operate
>as a switch?

Class E amplifiers are -intended- to operate at saturation, but they
are about the farthest thing from linear as you can get. That's why
you don't see Class E linears. Duh...

>And driving it "above saturation" will send it into
>> breakdown, doesn't it? What happens to your 'amp' then, Toll?
>
>
>Judging from the drive levels involved in competition, the output powers
>and the reliability some see, not what YOU expect.

Judging by your spin on the question, it's obvious that you have no
idea what happens at breakdown voltages.

3646. AM vs SSB or maybe FM

Newsgroup: rec.radio.cb
Date: 2002-01-28 03:03:53 UTC
From: StarrTerry <terry.box@which.net>
Message-ID: <3C54BF99.1B0CEEB2@which.net>
Source record: 113929

Is it true that the FCC is now phasing out AM CB in favour of SSB. Its understandable, but with only 40 channels I think that there should be more.

I believe that the CB world national and International should be standardized world-wide and Cbers should be allowed to use frequencies in the 25.965Mhz to 27.995Mhz, respectively. All countries involved should beaware that the present arrangement is 30 years out of date and considering the number of new rigs being sold, there should be new legislation for FM too as well as SSB (visa versa in some countries)

It would be an achievement if the various governments of the day throughout the world should consider this. If only we all lived in an ideal world, but alas...

Agree with the tag line.

I have seen some bureaucratese about future type acceptance that I will admit to not making just a whole lot of sense out of that seems to rule out Ancient Mary. Actually probably not a bad idea given that it has been outlawed virtually everywhere else but VHF/UHF air. As FM is not legal in North America for CB, this sort of mandates SSB and I would not be too surprised to see that eventually limited to USB. Other country's experience with FM is that it is subject to radio hackers as well as limiters get fiddled with to predictable effect.

Terry, I do think you had better get used to one basic fact: CBers have crapped in their own nest to the point where legal channel expansion has about as much chance as a Presidential pardon for Osama ben Laden. There are any number of legal Amateur frequencies to play on and the exams are not that hard any more and in fact never were. So the world in general has no interest in creating a second hobby service and every interest in throttling CB as it is presently constituted. I would suspect that the regulators will take the opportunity of the five-year atmospheric shutdown coming up soon to set up some real beartraps, particularly in the US. All in the interest of national security of course.

Well, actually Phil, things have been pretty good overall in our business.
The slowing economy has had some effect flattening out sales, but 2001 was
as good as 2000. Cell phone sales are up, satellite sales down, computer
sales almost non-existent but computer accessories are doing well. I have
been thinking about carrying more amateur radio related items but have held
off for the last five years in respect to my former employers at R & L
Electronics, they are only 40 minutes drive away. Try my website at

Hi, Jesse.

I am glad that you insist on such well qualified employees at your store.
You are to be commended for that. By the way, being a junior or senior in
electrical engineering does not mean that the person knows anything at all
about practical electronics.

But your store is a rarity. In almost every instance where I have overheard
someone asking a question - they get an answer. The problem is that the
answer is often totally wrong or incomplete. I don't think I have ever heard
a RS employee answer with "I don't know."

While shopping in Kenosha, WI two weeks ago, my brother and I stopped at the local Radio-Shack to pick up a ground-loop isolator to solve a hum problem with his turntable. Not spotting it right away, when a clerk walked up to us we asked about it. He responded by asking what application we had planned it for, described the problem, and he confirmed our diagnosis. He then told us that the R-S isolator was pretty much "junk", and said it may not solve the problem, but to go ahead and try it, as it can always be returned. I asked a couple of other questions about where in the store certain parts were to be found, and he knew immediately where each one was. To say the least, I was impressed and remarked to my brother what a rare find this clerk was. Back home in the Fox Valley of Wisconsin, I find most R-S employees totally clueless---a trait they share with their managers. This is probably one of the reasons most R-S stores have such incompetent employees: No employer wants employees that are smarter than they are.

So we have to look at all R-S stores carefully. Find those stores with employees that know their products, and patronize them. Don't shop at the R-S stores that are run by clowns. Maybe the trend will become that the knowledgeable stores will rise above the rest, and the R-S chain will learn from it. But then again, most customers are also clueless (Why else would they be asking R-S employees for answers?) and will make almost

any R-S store profitable.

(Special message to R-S Corporate management that may be following these threads: Don't punish the Kenosha employee for telling us one of your products is "junk". You all know you sell some great products as well as some junk. The Kenosha employees' honesty was greatly appreciated.)

A couple things to keep in mind.......first is, Comcast can only deliver where they have upgraded their system. Give them a call before you get too excited and ask them if your neighborhood has had the upgrade yet. Next, keep in mind that you are still going to be limited in speed by the sites you visit. In other words if you are fast and they are slow.....you are still slow. Last but not least, if you go with a cable modem or DSL get yourself a good Firewall program.....you wouldn't believe how many people will try to get into your machine.

No need, you have proven that you really can provide valid references.
Now why can't you provide them for all your other bogus claims? Like
how the conduction angle is increased by saturating a transistor?
Or... heck, let's try something different...

3668. Toll, you have some unanswered questions pending...

Newsgroup: rec.radio.cb

From: sparky@cet.com
Message-ID: <3c54fa8a.30200401@news.cet.com>
Source record: 113799

Here's just a few of your unanswered questions, Toll. This doesn't even including all the times you simply dropped one of your stories when faced with the undisputable facts, or other issues you spun away from by crying about books and semantics, or the facts that were never asked but told to you and you silently ignored. So take your time, because there is no time limit here. Heck, you can even cheat and copy the answers from the book if you want (...whoops, I forgot how much you hate books -- sorry!). And when you get done with these there are quite a few more issues outstanding...

>>When you have power being radiated from the coaxial cable, you have RF
>>feedback, which
>>makes your station useless for anything other than a squealbox.
>>
>>So yeah, its a safe bet that most of the stations that you DON'T hear

No one cared in 20's or 30's Germany either.

Sometimes spam is just spam, but whomever wrote this, whether or not it is in fact Marjorie Knoller (judging from the clear email address it very well could be), certainly, in the very least, did just enough research to outwit the uninformed. There are lunatics and then there are lunatics. It is the "smart" lunatics that you have to watch out for.

I care far less as to what newsgroups this has been sent to than its illegitimate content.

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times

& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

Screw Zone, get a router and let it be the firewall. Also has the added
benefit of the making a home network easier to build from that point.

> http://www.multispectral.com/pdf/MSSI_030100.pdf (page 11) (read the
title of the document. These people MIGHT know what they are talking about)

"With both frequency hopped and direct sequence spread spectrum waveforms,
peak power
is equal to average power."
Thus, with a peak power constraint, UWB waveforms can
provide lower average power densities by allowing the peak-to-average ratio
to increase."FCC should consider establishing a peak power limit for UWB
emissions, but allow for
arbitrary peak-to-average ratios (the higher the peak-to-average ratio,
subject to a peak
power limitation, the lower the average power emitted and the lower any
interference
potential); and,
Pulse desensitization factors must be maintained, given conventional
spectrum
measurement techniques for establishing average power, so as to limit peak
pulse power
output.

> http://www.dwd.de/research/mol/mol1s1.html (another RADAR installation,
> measured in PEP)

This site lists it read it both ways with neither way being listed as
preffered, again "preffered" are your words Toll Free.

"Power measured in Main Feedline Peak RF envelope (PEP) 16 kW "

"Average RF envelope 1.6 kW (10 % duty cycle) "

++
++++++++++++++++++++++++++++
> http://www.coaxial.com/products/83000.htm (Wonder why the PEP meter is
the
> one designated for RADAR)

Maybe you had better learn how to read Toll Free, the 83000 is the same as a
bird 43, it is a average reading meter and a switch to make it read PEP
mode. The key words being from coaxial are "amplitude modulated television,
telemetry, radar then it says (and PEP such as SSB and AM signals) . No
where does Coaxial mention radar is measured in PEP, they are your words.

" The Model 83000-A is designed to measure RF power in amplitude modulated
systems such as television, telemetry, radar and peak envelope power (PEP)
such as SSB and AM signals"

++
++++++++++++++++++++++++++++++++

Yes, Aaron, we know. So, my suggestion is to use this amp on 10m only.

3686. Re: Toll, you have some unanswered questions pending...

Newsgroup: rec.radio.cb
Date: 2002-01-28 13:55:53 UTC
From: Toll Free <tollfree@bigradios.com>
Message-ID: <JLc58.38278$dG.17496028@news1.rdc1.sdca.home.com>
Source record: 113819

I'll tell you what, I will answer these questions, when you learn to debate.

These questions where left unanswered in the hopes of dropping a point that
you took to arguing with semantics, rather than arguing the original point.

When you learn to properly debate a TOPIC, or an IDEA, we will continue.

When you stop debating terms like "Bird Watts", and learn that PEP is
used to measure RF and NOT just SSB, then we can talk.

Until then, you have nothing coming (and yes, I do have answers to all the
questions
posed below, the point is, you don't want answers, you want more to nitpick
at,
to cloud the facts, and attempt to berate someone on non-technical topics).

Bottom line, if ya want them answered, learn to debate the subject at hand,
learn to use
commonly accepted terms in the circle of people YOU are talking with, and
learn to
stop trying to nitpick when your on the shit end of the stick.

As I said in the past (and you want to rehash this why???? Another attempt
to berate someone
that you can't argue the facts with), I won't continue an argument of
semantics with you. These questions
where left unanswered because YOU stopped debating the topic, and started
debating semantics.

Their are frequencies licensed (but rarely, if EVER) used within the
spectrum you propose
to give to international CBers.

A. By ITU agreement, you must have CW knowlege to use the HF bands for
anything other than the original intent of CB (read this as, if you want a
hobby in HF, you have to learn CW).

B. Frequencies are allocated (but nobody I know of has heard any usage of
them since the mid 80s.. Not saying they are abandoned, but I honestly don't
know of any usage)

C. Wait until 2003. Thats the next ITU meeting, and CW might get dropped
:)

What we are waiting for, and this is the magic problem, is for you to
DISPROVE!!
that the class of service can be changed with overdrive.

See, that's how it works. When someone else makes a claim, and YOU don't
agree with it,
its up to YOU to disprove it.

Enjoy.

Toll_Free

> Or... heck, let's try something different...

Yeah, like you finishing a debate, and not arguing semantics.

Not true. Go search the debates between us in the past. I either leave the
debate because
you choose to argue semantics instead of the topic, or you leave because?
Well, we don't
know why yet.

so you use a typical duck-out
> line and drop the thread.

Bullshit. I will debate you until the cows come home, but YOU better learn
HOW to debate on
topic.

Debating someone about PEP, and then throwing in something completely
different, to get them
to go on a tangent, then telling the world that they must be wrong because
they aren't debating
the topic is a favorite of yours, one that would get you laughed out of
technical circles you
"purport" to be in.

Guess thats why you spend SO much time in a CB forum. Finally found some
people you can attempt
to dupe?

But if you ever change your mind and decide
> to respond anyway it will only be to spin away from the issue. You are
> showing your true colors, Toll.

No, Sparky, it will be to show the world that you know some big words, a lot
of theory,
and little to no practicle knowlege that has been proven, other than what
you purport
yourself.

Learn to debate the topic and I will go as far as you want. Keep running
off on your tangents, and I
will continue to drop the subjects. I debate, I don't listen to people
whine.

Nope, but all of the transistors that I have come across (MRF, SD and
Toshiba 2SC devices)
all have emitter ballast in them.

Why would we discuss microwave FETs in rec.radio.cb. Thats my point
exactly.

Make a statement about CB, and Sparky replies it isn't that way in other
services. When you
point out to him that this is a CB related forum, and we discuss CB related
topics here, and that
you are actually trying to tell him something that relates to CB and its
commonly used terms,
definitions, etc., and he tells you that you are either wrong, or that it
only happens in the CB world.

Since your the learned one, what transistors THAT ARE COMMONLY USED IN CB,
AREN'T
emitter ballasted?

I didn't say that ballast resistors did that at all. I stated that the
rectification
that takes place from the BE junction, as well as the drive level would
cause your amplifier to be turned on more than off, hence it is no
longer in Class C.

Yes, provide the quote where I stated
"> >They are there to equalize the currents between the transistors

> Gee, what a suprise.

Yup, more of your hidden agenda to attempt to discredit others who have taken
the time to find out that everything you read in a book isn't gospel, and that
real world testing is just as important as what comes out of a book.

Of course, this is the engineer Vs. Technician debate that has gone on for years.

a. The tech can't design anything from scratch that works.
b. The engineer can't design anything from scratch that works.

The engineer is all textbook smarts, has actually little working knowlege from being
educated by a book all this time.

The tech is just the opposite.

They form a symbiotic relationship. Big word. Go look it up.

The junctions break down.

Now what happens when you exceed them, and they don't break down?

Could the data sheets be a bit on the republican side, while common use
shows them to be
more of a democrat?

Aaron, please lighten up. We have a problem here. Please note that Tim is stating that that frequency is reserved for certain people. I seem to have lost the URL to the FCC so Tim can complain to the authorities. Would you be so kind as to supply the URL so they can settle their differences? Thanks for the assistance.
73 from Rochester, NY
Jim
-
No need for us to call the law or complain, Jim. Not a serious problem, either. Freebanders, I have found, are usually able to resolve their problems among themselves, without insults, calling names, unfounded accusations or threatening to tell someone that doesn't give a damn anyway. All it usually takes is to ask, just like Tim did. Imagine that.

The name is "Radio Shack"....RADIO SHACK! It originally was a store for hobbyists and radio amateurs.
Now you walk in and ask a simple radio-related question and they look at you like you are from outer space.
Obviously thier customer demographics have changed over the years and they had to change to remain financially viable, but they need to change thier name now, as they no longer serve the people who have spent so much time in those little structures they use as thier name.

How about changing it from "Radio Shack" to "Useless Crap"?

Bliben

That pretty well describes the situation. It goes back to the original 1927 Geneva Treaty which literally defines an amateur as knowing code without specifying what that means. It has been taken to be 5wpm for historical reasons.

>
> B. Frequencies are allocated (but nobody I know of has heard any usage
of
> them since the mid 80s.. Not saying they are abandoned, but I honestly
don't
> know of any usage)
>
Again, pretty accurate description. The low-VHF range, and that is what 27 MHz in fact is regardless of academic definitions, was once almost beyond the range of tubes in existence and was used for tank and jeep radios with things like superregens that would cause a modern engineer to barf. It was used as something of a radio 'Siberia' for years and included such wonderment as diathermy machines until it was pretty well agreed diathermy was useless. Channel 23, 27.255, was a real dumping ground.

Most things in this area, and that includes the original purposes of CB, are done better somewhere else. So yes, most of the allocations date from Noah and the Ark and if you take the time to go thru the FCC data base, broadcast allocations are nearly always duped on UHF. The big broadcasters have a licensing clerk who does these things and in the absence of a substantial fee, she will renew a license forever. There are some studio-remotes in use and a few fairly famous studio-transmitter links. I really doubt if anyone would or for that matter could without some custom hardware build any new ones. There are also some commercial or business allocations but I wonder if their equipment is not sitting in the Smithsonian's basement.

> C. Wait until 2003. Thats the next ITU meeting, and CW might get
dropped
> :)

I don't think anyone seriously believes anything else. But all it takes
is one country in a snit to stop it dead in its tracks.

But that does not really say a hell of a lot about CB except that it is
full of ham wannabes with intelligence or manhood problems, does it? Nor
does it change the fact that a fully codeless Amateur ticket would be
cause for coming down hard on remaining CB activity that does not fit the
international definition of Land Mobile which is what CB is under the
treaty.

You can make a government look incompetant and get away with it; you
cannot get away with making them ridiculous.

Hey all,

So I have a Uniden Pro520XL and a 4' Firestik II on my Jeep. Question about wiring - I currently have 18' feet of coax for the antenna from a previous installation. Obviously, in a Jeep that is a lot to just hide - do I need that much or can I shorten it?

THanks,

Joe

This is an interesting subject to me.

When I've measured the average dc value at the base of an operating power xsistor I found a small negative voltage on the order of a few hundered millivolts between the base and emitters.

I'm talking about an input carrier of aprox. 4-5 watts w/o modulation.

The amplifier was not actively biased. The xsistor's base had a rf choke to ground plus a 15 ohm resistor also to ground. The emitters were grounded.

I believe I was measuring the overall result of the device's junctions performing rectification relative to the base/emitter junction.

In my way of thinking, I would say this negative voltage was biasing the xsistor in a way that produced a reverse bias thus lowering the devices gain and output. Am I incorrect?

In this vain, I'm trying to understand the mechanism that allows this device to become biased for class A or AB since I'm accustomed to providing a small positive voltage at the base relative to the emitter.

I believe these newsgroups are read world wide. If someone from Mexico, or any other country where anything goes on CB, makes me a reasonable offer, I WILL sell them this amp. Just because the US forbids amps on CB doesn't mean every country does. I think you need a paradigm shift in your thinking.

The proper length for your coax is the amount that will
reach from your radio to the antenna with a little room
to spare, for redoing soldered PL-259's in a few years.

> hide - do I need that much or can I shorten it?
>
> THanks,
>
> Joe

Short answer. It makes not a dime's worth of difference how long your coax is with the set up you describe. Just leave it long enough to make gentle bends around things and put different connectors on it as you learn to solder PL-259s with enough heat to do the job without incinerating something.

Long answer: You have been told that coax length is significant and that 18ft is the 'correct' length. If you are running substantial 'dirty' power, by that I mean an amp with a high harmonic, multiples of 27 MHz, content it might have an effect; the effect is generally to choose between incineration by current or incineration by arcing. If your antenna became seriously mismatched it might have an effect but unless you knew why in advance you could not cut the coax properly to begin with. Summary: Coax length is irrelevant in a matched system and pretty useless in an unmatched one.

Nor is 18 ft likely to be the right length anyway. It is thought of as ideal because it is a half-wave of 27 MHz. For what are called 'common mode' currents it is the right length but the wrong cure; some ferrite beads are a better one or simply coiling the coax at the base of the antenna works all kinds better if this is a problem at all. For simple reflected currents from a mismatch, the idea is that at odd multiples of a half-wavelength will let the rig see what the antenna sees without getting involved with some fairly stiff voltages in between. Fine, I guess, but the speed of light or radio is not the same in coax as it is in the air or a vacuum so 18 ft is not really a half-wavelength. This 'velocity factor' can range from about .65 up to about .85 so a real electrical half wave is more like 12-15 feet. Summary: whoever told you about this knew just about enough to be really dangerous.

Then there is the matter of why you have an SWR. I mentioned harmonics earlier and removing harmonic traps is a pretty standard Turbo Tuning

technique to get the power meter to read higher while filthing up your signal and cheesy amps have no filtering to begin with. I will guarantee you that your matched antenna at 27 MHz is a really crappy load at 54 MHz and no length of coax is going to change that fact. When you have the SWR go up with an amp in the circuit it is a double-down lead pipe cinch that this is what is happening. SWR is a symptom, not a disease.

I beg your forgiveness for telling you a lot more than you really wanted to know.

Dick N&#65533;BK

>
>Since your the learned one, what transistors THAT ARE COMMONLY USED IN CB,
>AREN'T
>emitter ballasted?

Need a list? Ok then, here's a few I just checked:

2N1613
2N3553
2N3866
2SC799
2SC1306
2SC1307
2SC1944
2SC1945
2SC1969
2SC1974
2SC1975
2SC2078
MRF421

MRF426
MRF450
MRF454
MRF455

All these are used, or can be used, on CB frequencies. You will notice that many of them are the common final output transistors in most CB radios. None of them have internal ballast resistors. Now cite that mil-spec you claim to use for your wattmeter. Or do you need a bigger list?

>> >They are there to equalize the currents between the transistors

>Im saying if you drive a transistor into or above saturation, it will change
>it's
>operating point due to the rectification of the BE junction.

Which means that it was previously conducting at less than 50% (Class C) but is now conducting at 50% or more (Class B or AB).

You want proof that you are wrong? Ok, pay attention:

Current flows from emitter to base but is blocked from base to emitter. That's the basic idea behind rectification. In order for current to flow, however, you need a bias potential. In a ground-base bias scheme, that bias potential comes from the signal. When the signal is below 0.65V (the required bias potential) no forward bias exists, and no current flows. Since this is a ground-bias amp, the signal that is not amplified is the signal BELOW 0.65V; and since 50% of the signal is below ground, the total amount of signal that goes unamplified is the signal below ground PLUS the signal between ground and 0.65V. That's more than 50%, so the conduction angle -- the amount of signal that WILL be amplified -- is going to be LESS THAN 50%. This is fundamental, and it happens regardless of the size of the input signal or the state of saturation of the transistor, because the state of saturation has no reverse effect on the bias potential of the BE junction -- it is simply maxed out on it's current flow. At saturation, the current is relatively constant with respect to the voltage, and any increase of the input potential will only RAISE, not LOWER, the voltage on the base because of the increasing resistance. This does not change the conduction angle because when the transistor falls back out of saturation everything returns to normal, and the cycle continues as before.

So THERE'S YOUR PROOF! It's the fundamental operation of a transistor. If you want to dispute it, then the burden to prove your claim is now YOURS!

Now you say above that ballast resistors don't affect conduction angles at all. Yet this is what you added in your previous post:

>After all, you would know that all modern RF transistors have emitter
>ballast resistors built in.

When any significant resistance is added to the emitter, it will increase the forward bias potential of the BE junction in direct relation to the current being conducted through it. It's a simple E=IR function. When the transistor is off there is no current through the BE junction, and therefore the minimim required bias potential will still be 0.65V; that is, until that potential is met and current begins flowing through it. So regardless of emitter resistance, the amount of time the transistor is off is going to be AT LEAST as long as when there is no emitter resistance. And that means the conduction angle will be NO LARGER than without emitter resistance.

>Or....
>
>http://www-personal.monash.edu.au/~kaminski/ele2262/part-2/part-2b.htm

Your referenced website is about self-biasing a transistor using voltage dividers on the base. I don't even know why you referenced it.

>They teach that in textbooks and some datasheets (although it is pretty much
>taken for granted now).

No, ballast resistors are NOT "pretty much taken for granted now".
They are explicitly stated in the datasheets for several reasons, not
the least of which is the decreased dissipation rating when they are
integrated in the package. You will find that very few RF power
transistors (for the HF band) use ballast resistors because of the
increased risk of thermal runaway on the lower frequencies. Every
transistor has an normal internal resistance, but that's not the same
as resistance added intentionally for ballast. On upper VHF and UHF
that's a different story, but we're talking about CB radio, right? Or
was it microwaves? Radar? Ham radio?

So if ballast resistance has nothing to do with conduction angle, why
did you bring it up at all? You aren't trying to change the subject
again, are you?

<snip repetitive demands for proof>

Your boy Bill is correct (for once), you just can't read. NOWHERE does
he state that overdriving the input will push an amp into linearity;
on the contrary, he correctly states that overdriving will cause more
distortion than running Class C. But to get more specific, he states
that "under certian circumstances" a "constant carrier" input can be
made to provide sufficient bias for the BE junction. Absolutely true.

Notice the use of the term "constant carrier". That doesn't include AM
or SSB (or, apparently, "FM PM" since it has "swing"). The steady
input level is what allows the signal to be used to generate the bias
potential, and the circuit must be specifically designed to take
advantage of the input in that manner. It also requires a tightly
controlled input level to avoid under- or over-bias. It can also
distort the input signal by loading if not done properly. It's not a
very good bias scheme, but it does work "under certain circumstances",
and it does NOT work on just any amp by overdriving the input and
pushing the transistor into saturation.

You have some preconceived notions about this entire engineer/tech
relationship. You seem proud that you are not an engineer, and I have
no problem with that. But until you are one, don't talk about things
you know nothing about.

Oh, that's right, you said the same thing to me about keydowns!

Those aren't linear amps. Maybe it's time you looked up the definition
of a linear amplifier.

>> >And driving it "above saturation" will send it into

...and? What happens to the voltage and current? What happens to the base current? What's the effect of exceeding the breakdown voltage in an RF amp?

That's a common issue with ground-bias amps. It's caused by the DC
return path (base resistor or choke) having a higher impedance than
the base. It can push your amp a little bit farther into the Class C
operating area. Some people try to eliminate this by shorting the
input DC blocking cap, but sooner or later that will blow out the
final in the exciter. They also try to reduce the value of the base
resistor or choke, but that will overload the exciter, also resulting
in failure.

This is yet another reason why these amps are crap.

You don't have to make your backpeddling so obvious. I thought you
might at least try and spin it with some style. I'm really
disappointed in you, Toll.

Tell ya what, I'll back off if you just answer this one question:

Cite (don't reference -- CITE!) the mil-spec you use for your
wattmeter.

You can do that, right? I mean, if you are using this mil-spec, then
all you need to do is to pick up a piece of paper and type what you
read, right? Oh, that's right, you can't read. Well, maybe you can get
a friend to do it for you -- hell, you have 4000+ friends, right? I'm
sure one of them will help you copy a mil-spec, don't ya think?

I guess I'm still in the dark on this one. I must not be reading well. How would developing more negative voltage on the base provide a change in operating bias closer to a or ab? What is the mechanism that takes an overdriving signal level and translates into a bias voltage capable of biasing the transistor towards a more linear class of service?

Just stating the facts. Japan made the highest quality CB's. THe American Made CB's in the 50's & 60's were few & far between. Because of communist policies of the US govt., all CB manufacturers were chased out of the country after '76. Then Taiwan was 2nd in quality. Then Hong Kong, Korea, Phillipines. After that, it goes down hill. The SAME international criminals that sent you to E. Germany FORCED the radio manufacturing to be done by the little Yellow people. By the way, they need Jesus too! I have never owned a Jap car, period. So we are forced by the internationalists that decide where things are going to be made at to buy what is there. We still can boycott CHINA for all if it's sins. Pearl Harbor was forced by enemy domestic & National Socialist/ Communist Roosevelt to go down, to get US into the war, because MY hero George Washington said "STAY OUT of the affairs of Europe." So why then did YOU go? Weren't you aware of what George said?!
Dave!!

Most hams are only to happy to abide by rules. Have you checked
Canadian regulations regarding the sale of illegal-for-CB gear? Why
are you so intent on getting the amp to a country where "anything
goes"? Do you have some unresolved conflict? Did your father beat you
with a strap as a child to make you "tough" (like Mopars)? Is getting
linear amplifier in the hands of a CBer a way to vent your anger at
your Dad? Maybe you need a NEW paradigm to replace your obviously
warped one.

Well there is a two part answer to your question. In WV the problems we had were due to the terain, the ERV (Emergency Response Vehicle) uses a VHF low band radio on 47.5 Mhz, as we all know this is line of sight, so there were times that as I sat at my desk in the office I could not reach a ERV on the other side of town. If anything we needed people to set up relay stations. I am currently working on getting feild expediant repeaters set up.

Locally on the other hand, yes I have had people with splatter boxes ruin our EM-COMMS, I have already related the one about the a$$ who almost caused a Life Flight helicopter to crash into power lines when

landing in a field in the dark, I was on the radio guiding the chopper in when some fool running 5kw splattered us all to hell and back. One of those injured at this accident was the son of a friend of mine, one of our local deputies. Now this guy that was running 5 KW was not trying to talk around the world, he was talking to his buddies that lived 3-5 miles away, this bunch all ran power 24/7 and never once tried to "shoot skip" they were just trying to see who could key over the others, at the expense of everyone else. After this accident, the father of the young man injured, along with some of the other local LEO went and knocked on these individuals doors, funny thing happened after that, we never get our EM-COMMS interfered with. The guy running 5KW, I saw his amp setup once, he had a 3 stage system the final ran on 220 with 4 huge ceramic tubes, this sucker was built into one of those huge entertainment center racks that takes up half of a living room. I saw the after eeffects when he forgot to switch antennas and literally melted down an A99. Why do people need to run this kind of power?

As for the statement about REACT using amps, not my team, we keep it clean, I take my radio hobby seriously, sure at one time I played with amps "because everyone else had them", I had a knock on my door, a friend of mine from the local PD came in and asked me to turn off my box as I was knocking out their radios, I trashed the box right then and there and have never wanted another one. Besides, anyone can talk around the world with a gazillion watts, it is alot more challenging, and rewarding to make these contacts witl lower "legal" power. Like one day I was at the office waiting for our members to show up for a meeting, I went to 38 LSB and listened in, it was quiet so I keyed up, in seconds I had a reply from england, and a few minutes later from iceland, now I am in N.W. Ohio on a plain jane Uniden Washington with a burnt out meter lamp, and an A99 on 20 ft of 2" pipe on the roof, and the office is in the valley, the deepest part of the old "black swamp".

Woman's bail cut in half in dog case
Knoller no more risk than Noel, judge says

Jaxon Van Derbeken, Chronicle Staff Writer Saturday, September 1, 2001

San Francisco -- In a surprise move, a San Francisco judge cut bail in half yesterday for a woman facing second-degree murder charges in the dog-mauling death of her neighbor.

Superior Court Judge James Warren reduced Marjorie Knoller's bail to $1 million from the $2 million originally set when she was jailed in March along with her husband, Robert Noel.

Warren said that while Knoller may be facing more serious charges than Noel -- who is still being held on $1 million bond on manslaughter charges -- she is no more of a risk to jump bail.

The ruling followed a daylong, often heated hearing in which prosecutors argued that the accused couple had strong ties to the "vile, vicious, murderous" Aryan Brotherhood prison gang. Warren kept details of prosecutors' accusations secret to avoid adding to pretrial publicity surrounding the case.

In arguing against cutting Knoller's bail, the prosecution also said that the couple are flight risks and that Knoller had done nothing to help Diane Whipple as she lay dying in her Pacific Heights apartment building after the dog attack.

The defense countered that the prosecution was "cruel" for suggesting that Knoller let Whipple die after the Jan. 26 attack by the Presa Canario dog that Noel and Knoller had

been keeping.

The defense stressed that both defendants had an unblemished reputation and strong ties to the community. Far from letting Whipple die, they said, Knoller had acted heroically.

In the end, Warren acknowledged prosecution arguments about the risks involved but ordered the bail reduced based on his theory of equal flight risk.

Prosecutors had no comment on the ruling, citing Warren's gag order in the case. But a private attorney suing the couple for wrongful death was puzzled by the decision.

"It doesn't make sense. . . . I don't understand it," said Michael Cardoza, who along with his client, Sharon Smith, attended the first part of the hearing.

It is unclear whether Knoller can raise even the reduced bail sum.

"I hope so," said Knoller's attorney, Nedra Ruiz, who added that she disagreed with the judge and said that bail of $1 million is "unnecessary" because of no flight risk.

"She's stunned; she feels she deserves release on her own recognizance," Ruiz said about her client's reaction.

At the hearing, Ruiz described Knoller as a "nice Jewish girl from Brooklyn" with ties to the community and no criminal record.

"There's nothing in this evidence to show she was anything but brave in the face of a tragedy that would strike most people speechless, that might dement a person," Ruiz told Warren.

Later she said Knoller "put her body on (Whipple) to protect her from this crazed, damned dog."

Prosecutor James Hammer bristled at the suggestion that Knoller valiantly fought to protect Whipple's life.

"If Marjorie Knoller's such a hero, why didn't she give first aid to Diane Whipple while she was dying?" Hammer said. "If Marjorie Knoller's such a hero, why didn't she call 911? And if Marjorie Knoller's such a hero, why did she go on national television and blame Diane Whipple for her own death?"

When he again stressed Knoller's failure to help Whipple, Knoller shouted, "I did too, you son of a bitch!" That brought a threat from the judge to remove her from court.

Much of the testimony in the hearing concerned the alleged ties the accused may have to the Aryan Brotherhood, in part through a Pelican Bay State Prison inmate they adopted.

The judge appeared to agree with the prosecution that there was cause for concern, saying, "The court does find that Aryan Brotherhood is a danger, that people are in danger and that witnesses in this case are in danger. . . . The Aryan Brotherhood is potentially a resource of some value to the defense."

He also noted prosecutors' argument on the couple's alleged flight risk. Prosecutors pointed out that the couple drove at high speeds while being followed by police after testifying before a grand jury that would later indict them.

That was not enough, however, for Warren to order Knoller's bail kept at $2 million.

Actually the mike it comes with is optimised for SSB, if you get the
SM-20 deskmike you get AM comparable to a good CB-AM radio. now that
mike is about 160-170 dollars.

I use SSB and never have to use the Clarifier (RIT) when changing channels but then again Im using a Icom so stability not SSB is the fault for using clarifier. unidens etc are not exactly stable radios

3767. Another (in Depth) explaination of antennas

Newsgroup: rec.radio.cb

It just came with the hand mic but not complaining. Has to be the best
bargain I ever came across. Actually ran across it listed in the local
classified section of our paper that stated miscellaneous "ham radio
equipment for sale" so I called to inquire. Evidently the former owner just
moved to the area before his passing and had the radio complete with manuals
nicely packed in the original box. Thought it would be nice to have since I
just passed my no-code and looking forward towards upgrading by summer.
Family members in charge of the estate sale obviously didn't know the value
of the equipment or simply were looking for a quick sale so I wasn't about
to quibble. They did have some other equipment including several pricier
Kenwood's and a 2M/220 handheld but figured my wife would throw a fit if I
purchased more than one! :oP

oh yeah,
then of course, you have people like 228 up in winslow arizona that
illegally modify radios to operate at substatially higher output power
and expanded frequency range (well outside of the radios original design
specifications!)

There are others I could probably drop the names of who routinely screw
up down here in phoenix and end up causing enough spectrum splatter to be
heard 3 or 4 megahertz away just from the amount of overdrive they stick
on their black-box linears.

I just wish the FCC would get off its collective ass and actually start
enforcing the rules that are still on the books.

> Tom W7WHY

I contacted the ARRL about that when it first appeared in the
Handbook! I was amazed to see it.

Steel wool baluns do not work. The ARRL has removed that balun
description from their books now, after testing and confirming.

The reason they do not work is the iron needs to be powdered in
insulated particles so small that eddy currents have no effect. A
solid steel slug, or even steel strands, will actually REDUCE the
inductance of any inductor a carrying HF signals.

>YOU are the one who spews what happens in a book. I tell people what has
>been found by reading, as well as going out and DOING it.

You tell people what you want, truth or not, just as long as you think
it will convince them that you are some kind of super-tech. But the
-truth- is that you are just a wannabe that doesn't understand half of
what you are pushing off on others. You claim that everything I say

comes out of a book, yet you whine when I don't provide a reference
that you didn't ask for. Or tell someone to use steel wool for a choke
because it was in a -book- and it's obvious that you have never had
any experience with rust. That's hypocritical, Toll. And you are wrong
once again: A lot of what I have to say -doesn't- come from the books,
a lot of it comes from experience. That experience comes from years
and years in the classroom, the lab, the field, and in my own shop.
And my experience has shown me that books are usually good
representations of what really happens. Why is that? Because they were
written based on the same kind of experience that I have gained over
the years. They were written using information provided by technicians
and engineers that have worked in the field since radio was invented.
These 'books' that you so hate are the combined education and
experience of all these people that have learned what they did through
both formal education, practical experience, and trial & error. Do you
honestly think that nobody ever experimented with different ideas? Or
pushed the envelope of practical application? Of course they did, and
they will continue to do so. Most will do it responsibly. They will
respect the lessons already learned, and they will learn those lessons
through books and formal education, and they will supplement that
learning with practical experience. They will learn the proper
language and terminology so others can understand and duplicate their
work. But you are not one of those people, Toll. You just want big
power with little effort and no responsibility. You don't even compare
to a real tech. You think you contribute to the radio community with
your amps and 'bird watts', but you don't. You are just pushing away
everything that has been learned and setting the radio field back into
the dark ages.

>Tell me. when you parallel two 1/4 wave antennas, spaced a quarter wave
>apart,
>both of them tuned individually for 1:1 swr, what happens?
>
>Not using a matching network, but just adding a T, using 50 ohm coaxial
>cable?

Where are these mounted? On a vehicle? What's the input impedance to
each antenna with and without the other antenna mounted? Is the
spacing the actual distance between the antennas or is it the
electrical length of the coax? What is the electrical length of the
coax? Where is the tee located along this coax? Are the antennas
in-phase or reverse-phased? Was the SWR checked with the other antenna
mounted? attached to a coax? Was the non-active antenna loaded or
open-circuit?

<snip>
>No, what I was trying to say was that you don't always get to use USB and
>LSB
>on the same frequency in common practice. That's all. YOU started in with
>the rest,
>that I was saying SSB was more inferior, et al.

Ok, let's review:

>A. Most people on CB radio are using inferior radios, that DON'T have the
>filtration necessary to accomodate this

I believe this was addressed. SSB uses much better filters than are
used for AM, and the point of SSB filters is to eliminate the other
sideband. If the filter is capable of eliminating the sideband on
transmit, you can bet it can do it with receive, too. And it does.

>B. Most people on CB are using wider radio transmistters, due to defeating
>or cranking up ALC.

And that is their problem for modifying their radio when it shouldn't
be modified. Regardless, those mods have no effect on the SSB filter.
But when others modify their radios like that it can cause a wider
signal to be transmitted (the harmonics generated past the SSB
filter), interfering with the reception of others.

>C. Quite a few people on CB insist of using "half channels" or 5Kc drops to
>escape the rest.

And again, an improper modification. There is also the practice of
'locking' the clarifier, which some claim to give an advantage. It
does not, because it shifts the transmit frequency into another
sideband or channel. Use of the clarifier (or BFO) is, and should be,
limited to receive only. When it is, it works fine, and both sidebands
can indeed be used on the same channel.

>ALL I was saying was that in common use, your statements don't always hold
>up. You
>where quoting textbook theory, when in fact, it doesn't ALWAYS work under
>real world
>conditions.

When 'common use' and 'real world conditions' describe a band clogged
with improperly (i.e, illegally) modified radios, I agree, and I
agreed with it before. I also provided the 'real world' condition that
when you can't get through on one sideband or channel the operator can
exercise the 'common use' practice of changing the channel. And with
SSB there are twice as many places to change it to. Fact.

<snip>
>> >> >C. Quite a few people on CB insist of using "half channels" or 5Kc

>
>Why? When a tree falls, but nobody is around to hear it, does it make
>noise?

That depends on your definition of a 'noise'. If a sound must be heard
in order for it to be a 'noise', then no, it makes no noise at all.
That's a very old lesson in semantics, and I'm suprised you even
brought it up. I really should put a spin on that like you do: What do
trees falling have to do with SSB? But, unlike you, I can comprehend
your point. You failed to realize that the standard for CB radio is
for the channels to be centered on specific frequencies, and NOT to be
slid 5kHz up or down.

<snip>
>> >> >Because of the 3 reasons listed above, and others, it makes it a

>
>
>No. I am friends with the majority of CB operators in the greater San Diego
>area.

HA! Now THAT'S rich! Let's do the math: There are 6 billion people in
the world, but we can trim that by 25% because China and some other
overpopulated, underdeveloped countries don't have much in the way of
CB radio. According to Jay there are 12 million CBers. So that means
one out of every 375 people is a CBer. Ok? Now the population of San
Diego is almost 2 million, and a conservative estimate of the
surrounding area would add another million to that (you did say "the
greater Sand Diego area", didn't you?). So that means that there are
at least 8000 CBers in the greater San Diego area. Ok? Now a majority,
in the most conservative calculation, is greater than half; or, in
this case, more than 4000 CBers. And these are all your friends? Wow,
Toll, I had no idea that you were so popular! And you know exactly
just how many of them have SSB capable radios? Damn, did you take a
memory course or something? Or do you have all these friends in your
database? Well, whether using a great memory or a database, I'm sure
you can list these friends, can't you? After all, they are your
friends, right? So let's see the list? Hell, I won't even hold you to
4000, just list a thousand or so, then I'll contact them and see if
they know who Toll Free is. How about it, Toll?

<snip>
>No, what I was saying (I keep having to reiterate the same thing here) is
>that
>in REAL WORLD PRACTICE, you CAN'T ALWAYS COUNT ON the 3Kc
>of bandwith of an SSB transmitter allowing you to use the same frequency for
>USB and LSB useage.... As well as the fact that SSB isn't the "cure all" for
>all
>our woes.

Who said it was? All I said was that it's better than AM, which is
true. What's your problem?

<snip>
>My "keydown clique"...? Please provide proof that most of the people I deal
>with
>are involved in keydowns now?

Actually, I had no idea you had SO MANY friends, and I don't suppose
most of those 4000+ friends attend keydowns, so I'll withdraw that
statement.

>And yes, most of the people I know use the 8719 chassis from Uniden. An SSB
>capable
>chassis.

So you know 2000+ people with an 8719 chassis? That's interesting,
since the 8719 (or, more specifically, the MB8719) is a PLL chip, not
a chassis. But then I had no idea that the MB8719 could only be used
by uniden, and then only for an SSB radio. How many of all those SSB
capable radios use a different PLL or other method of frequency
control?

> Please disprove this, or keep your assinine comments to yourself.

I just did.

How many points should be awarded for Marines killed or wounded
because of comm interference during a live-fire exercise? Do they get
extra points if those Marines were combat vets? or maybe by how many
kids they leave behind?

hi joe.
you don't need that much cable because the more cable you have the more loss you will get through the cable. you will get more gain out of a shorter cable as long as it is good quality coax (it must be 50ohm), and all of the connections must be done properly.
i hope i helped

Hi Craig, (Nice name. ;-))

Congratulations on one heckuva bargain. Like that receive, eh? I felt the same way about my FT-840. I remember "way back when"...all I wanted to do was get a FT-757GX to work 11-meters on. Thankfully, somebody talked me out of it. I read that you're going to get your Tech ticket and then work on upgrading over the upcoming summer, great! Lemme tell you, it's easy as pie. If you can, study the General questions along with the Technician's and take both writtens at the same time. That way, when you pass the code (And trust me, you WILL!) you're a General right on the spot. I did NOT follow this advice and concentrated solely on the code only to discover that the exam wasn't so hard after all. So I spent about two weeks as a Tech "plus."

Oh, why did I say thankfully above? Well, after passing the code and gaining all those new privileges, I realized something. I now had something that could be taken away from me if I got caught using a ham rig on 11-meters. (Legal 40 or freeband.) Heck, those are privileges I worked for...and so will you. (Although after all is said and done, it won't feel much like work as long as you like radio.) The ARRL website has a page where you can download and print the pool questions without paying a red cent. (Bargain #2!) The QRZ website lets you take practice exams and displays you progress as you answer each question. (Bargain #3!!) The AH0A website has Morse Academy that is also a free download and allows you to practice your Morse. (Bargain #4!!!) I'd also be happy to lend you my Gordon West Morse code cassettes. (Not a bargain, just a sincere offer.) You'll likely be nervous about the code, but please trust me on this...when the headphones go on and the actually test characters start coming and you realize that it's nowhere as difficult as you thought...you'll get the biggest $hit-eating grin on you face. Next thing you know, you're a

General and if you want a nice amp, you can grab a nice 1500 watt monster anywhere and they come with warrantees and they're built like tanks because they've nothing to hide. Try that with a "sweet-sixteen." (Personally, I'm not an amp kinda guy.)

At that point, don't risk your ticket. Could I turn down my Yaesu and run 15 watts on the "legal 40" indefinitely and probably never get caught?...yeah, probably. But why chance it? I chose to use a Grant XL with a Channel Guard and a SP-1a speech processor. If I need to be heard on CB, I get heard and if "Kilowatt Charlie" parks a few channels away, whatever gets past the Channel Guard is fed into the "bit bucket" courtesy of a DSP unit. That's the nice thing about multi-port ham gear, it shares nicely with you 11-meter equipment. Listen, I don't want to preach but you've got a real nice head start with that Icom. I'd love to see you enjoy the heck out of it. If I can help in any way, shape, or form...just drop me an e-mail. Take it easy now.

Why would you be thankful of this? I had a 757 GX for a number of years and
that radio had AM audio quality that would have people telling you to get
your hands off their coffee!
Train

3789. Re: Radio Shack stops selling diodes, res, caps (etc..) ????

Newsgroup: rec.radio.cb

Cross-posted to: alt.radio-shack,rec.radio.amateur.misc,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

Back to the topic of RS, I can recall an odd scene I witnessed in a Radio Shack store in Cypress, Texas (a suburb of Houston). I was just looking around when a couple of guys came into the store and purchased all of the resistors they could of a certain size. It turned out that they were from Compaq -- a startup computer company (the year was 1984) -- and that they needed the resistors to complete a production run on time.

The clerk told me that the Compaq guys used to come into his store for parts all of the time.

3790. Re: Japanese CB's were good, but cars were JUNK!

Please give us the "communist policies" that ran the US CB makers off.
Facts are facts, the US CB makers could not compete with either the quality
or price of the Japanese CBs. Yes there were some EXCELLENT US models but
they were expensive compared to comparable quality Japanese models. It's
called capitalizm and has nothing to do with "communist policies." By the
way, I have a "Japanese" car that I'll put up against any "American" car.
It's Mercury Topaz. No, it's not an American car. Sure, it was put
together here by union people making $50 per hour to screw in a screw but if
you look at the parts you'll see that the engine is Mitsubishi, the
transmission is Hitachi, the computer system is Mitsubishi and assembled in
Mexico. The instrument panel was made in Canada.....
So much for my "American" car. The same goes for my Mercury Villager, which
is just a Nisan Quest. My Chevy Suburban and Ford pickups? Nope, full of
foriegn components put together over here.

There are no American cars these day, just American assembled cars put
together from foreign parts.

If you want to see where the "communist plots" are just look at that good
old traditional American motorcycle Harley Davidson. Back in the '70s they
were just about to go under because of Japanese competition so what did they
do? They went crying to Congress and had stiff taxes put on all foriegn
cycles. All this did was make the Suzuki and Yamaha bikes more expensive
than the hogs. So what did Harley Davidson do? They jacked the prices WAY
up. That's the free market for you! I wonder how many Congressmen had
pockets lined to pull that off. I haven't ridden a hog since.

Kevin, WB5RUE
If you have no heart for those who are lost then you are a pharasee and not
a Christian.

THe "Communist policies" are the ones that PERMIT FOREIGN STEEL DUMPING in this country today, while the people have to pay the communist Income Tax on what they make, as well as the company, so we can't compete. The PEOPLE IN CONTROL (CFR, Trilateral Commission) control everyone with the debatched currency you have in yo pocket! I hear ya on the sins of the Union. The Govt.'s job is to act FOR OUR GOOD (Romans 13), and by running ALL the businesses to mexico, which you support (I try not to), we got some VERY serious problems in the country that will start a dangerous revolution when enough people lose their jobs because of Govt. & foreign meddling! I believe a founding Father said that the bankers power is more dangerous than standing armies!!!!!!!!!!!!!!!!

You mean the store that WALLY Mart put out of biziness? Better to support the small parts store, than the "state's parts shop," which is Rats Shack! Dave!!!!!!!!!!

Man are Galaxy radios that bad? I never used one, but my experience
even on the upper cb channels I pretty much just change channels and I
get them dead on without a problem. maybe in my area Galaxies are not
as popular.

so is Uniden better in stability for regular cb sideband than galaxy?

Have you programmed all the CB channels into it, the cool thing about the IC-718/IC-78 series is you can program all 40 channels and label the channels so when your on the road its just turn the knob to change channels just like a CB. I have channels 1-35 programmed as AM and 36-40 programmed as LSB. and they are labeled CB-1,CB-2,CB-3 etc.. Anyhow ICOMS are nice gear.

"Stagger 'TexASS TURD Douglas Jerry" Lee" <SLee@houston-hunks.com> wrote in
message news:Y48.88184$Y17.5656@houston-hunks.com...
>
> Back to <>

Anonymous coward and all-around fuckwit
"Stagger Lee" <SLee@houston-hunks.com>
revealed what a hypocrite he is and ironically admits he has no credibility
in message
<3C36FDCC.76EC185D@houston-hunks.com> :

"Therefore, I find your story difficult to believe. Your own anonymous
status makes the story even less credible."
--
Chickenshit COWARD Faggot Lee pathetically tries to justify his hiding
behind anonimity in <3B8FFFF5.143FA347@houston-hunks.com>:

"...readers have already had uninvited people show up at their
homes, have had people subscribe them to magazines and book clubs, have
received hang-up calls in the middle of the night, have had poison pen
letters written to their neighbors and employers, and have had poison
pen email sent to their ISPs in an attempt to get their accounts
canceled. That's not a "what if" scenario either: It has happened
repeatedly to certain members of these news groups, yours truly included
(one person has emailed repeated lies to Altopia in an attempt to learn
my identity). One of our readers has even had to go to the courts and
obtain an injunction against one of those nuts.
I choose not to give insane people like that any kind of edge in
physically locating me, and if you think that's "cowardice", you are
only demonstrating your profound ignorance of Usenet and of the kind of
people who read these posts."

Then the no-balls coward ends his feminine cuntly whining with:
"And do you know what else? I AM SICK TO DEATH OF THOSE WHO REPEAT YOUR
TIRED OLD, IGNORANT REFRAIN. Until you learn a few things, you ought to
shut your arrogant mouth."

Nuns & Holy Water

A train hits a bus load of nuns and they all perish. They are all in heaven trying to enter the pearly gates past St.Peter.

He asks the first nun Sister Karen have you ever had any contact with a penis???

The nun giggles and replies, Well, once I touched the head of one with the tip of my finger.
St Peter says OK, dip the tip of your finger in the holy water and pass through the gate.

St Peter asks the next nun the same question Sister Elizabeth have you ever had any contact with a penis..

The nun is a little reluctant but reply's Well I once fondled and stroked one..

St Peter says, OK dip your hand in the holy water and pass through the gate...

All of a sudden there is a lot of commotion in the line of nuns. One nun is pushing her way to the front of the line. When she reaches the front of the line St Peter says Sister, Sister what seems to be the rush???

The nun reply's If I'm going to have to gargle that holy water, I want to go before Sister Mary sticks her ass in it!!!

Bathroom Light Problems

A doctor is making a routine call to one of his elderly patients. He asks, ''And how are you doing today, Mr. Johnson?''

Mr. Johnson replies, ''I feel just fine, doc. But you know, it's the strangest thing. Every night when I get up to pee, the bathroom light goes on for me automatically when I open the door!''

The doctor is worried that the old guy is getting senile, so he phones the man's son, and the son's wife answers.

The doctor tells her, ''Mrs. Johnson, I'm a little concerned about your father-in-law. It seems that when he gets up to urinate at night and opens the bathroom door, the light somehow goes on...''

Mrs. Johnson yells, ''STEVEN! Daddy's peeing in the refrigerator again!''

Drugstore Condems

A young man walks into a drug store and asks the cashier for some condoms. The cashier says "Got a good one?"

"Yup, hot date tonight! This ones pretty much in the bag? she's sexy and givin' it up tonight!" the man replies.

A little while later the man goes to his girlfriends house and they sit down to eat dinner with her parents. They ask him to say grace. So he starts saying grace quickly and nervously. He prays and prays and prays some more.

The girl looks over to the young man and says to him "I didn't know that you were so religious!"

The young man says "I didn't know your father worked at a drugstore!"

3817. fourth good joke

Chest Letters

A girl goes to the doctor and takes off her shirt to be examined. On her chest she has a huge red "H."

The doctor asks, "How did you get that red 'H' on your chest?"

She replies, "My boyfriend goes to Harvard and he's so proud of his school that he never takes off his sweatshirt, even when we're making love."

So the next day the doctor has to examine another girl and she takes off her shirt and has a huge blue "Y" on her chest. The doctor asks, "How did you get that blue 'Y' on your chest?"

The girl replies, "My boyfriend goes to Yale and he's so proud of his school that he never takes off his sweatshirt, even when we're making love."

The next day the doctor has to examine another girl and she takes off her shirt and she has a huge green "M" on her chest. The doctor asks, "Do you have a boyfriend who goes to Michigan?" and the girl replies, "No, but I have a girlfriend who goes to Wisconsin. Why do you ask?"

Old Lady Farts

A little old lady goes to the doctor and says, "Doctor I have this problem with gas, but it really doesn't bother me too much. My farts never smell and are always silent. As a matter of fact, I've farted at least 20 times since I've been here in your office. You didn't know I was farting because they don't smell and are silent."

The doctor says, "I see, take these pills and come back to see me next week."

The next week the lady comes back. "Doctor," she says, "I don't know what the hell you gave me, but now my farts...although still silent...stink terribly."

The doctor says, "Good!!! Now that we've cleared up your sinuses, let's work on your hearing."

Head & Shoulders

A blonde and brunette are in an elevator. On the 3rd floor, a manager gets on who's perfect; 3 piece suit, great build and nice butt, the bad part is they both notice he has dandruff. The man got off on the 5th floor.

Once the doors closed, the brunette turned to the blonde and said, "Someone should give him Head and Shoulders".

To which the blonde replied, "How do you give Shoulders?"

So....does this mean that youre interested in the radio?

> sorry to rain on the parade there, but its *used* equipment and I pay no
> more than 50% new for such, regardless of condition<<

You are raining on my parade, and very good for you the fact that you wont pay over 50% for used equipment, that plus one dollar buys you coffee.

I personally think $100. is a good deal for this Cobra. You know nothing about my radio.

A question...do you also rain on everyones elses parade?

Common sense and being a gentleman tells me that if Im looking for an item to purchase or just "window shopping" if I run into something that does not interest me, I move on to the next.

>Why would you be thankful of this? I had a 757 GX for a number of years and
>that radio had AM audio quality that would have people telling you to get
>your hands off their coffee!
>Train

Well, at the time, the FT-757GX (...& GX II, for that matter!) had been out of production for a long time. The best I'd have gotten would've been a used example. (Plus I rarely, if ever, use AM.) Then my best friend told me that if those jerks who made me feel like $hit so many years earlier kept me off the ham bands for good, then they had won. So the best way to tell them to @%$# off was to get off my a$$ and take their precious spectrum. Actions speak louder than words.

So that Christmas I found a Yaesu FT-840, a Heil Goldline mic, and a Vibroplex straight key under the tree. The straight key had the receipt scotch-taped to it along with a note that read, "For this price you'd BETTER learn how to use this!" BTW, in case you haven't already guessed...my best friend was Santa Spouse. It would've been far easier on our budget to grab a $300 used FT-757 and let me play "freebander," but someone who gave a $hit about me wanted more for me. So if I EVER come across like I'm preaching, it's not because I think I'm holier than thou. I'm just passing along a favor. (Minus the gear though. :-)) Craig's got himself a kick-a$$ starter rig. A couple of easy writtens and an underwhelming 5-wpm code test...and the amateur HF spectrum's his oyster.

I'll fess up re. my favorite 11-meter rig though, Train. The Clear Channel AR-3500. I still have it. Now it serves me on 10-meters. ;-)

I've got a few radios that are surplus to my needs that I'd like to sell.

1- Uniden PC78XLW. Same radio as the Cobra 29 (only Uniden quality), with weather channels. Not DOA, $85 shipped.
1- RCI 2900 10M rig. Nonfunctional, but the face plate and knobs are beautiful. $40 shipped.
1- Cobra 25. Functional, except on the channel display a couple of the LED's are burnt out. Channel 18 is channel 18, but reads 19. $45 shipped.

Email me direct if interested.

Before the Federal Communications Commission Washington, D.C. 20554 In the Matter of)) Klaus D. Kramer) File No. EB-01-DL-0345) Oklahoma City, OK) NAL/Acct. No. 200132500001 FORFEITURE ORDER Adopted: November 8, 2001 Released: November 13, 2001 By the Chief, Enforcement Bureau: I. INTRODUCTION 1. In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of nine thousand five hundred dollars ($9,500) to Klaus D. Kramer ("Mr. Kramer") for willful and repeated violations of Section 301 of the Communications Act of 1934, as amended ("the Act"). The noted violations involve Mr. Kramer's operation of a radio station on Citizen's Band ("CB") frequencies without Commission authorization. 2. On July 13, 2001, the Commission's Dallas, Texas Field Office ("Dallas Office") issued a Notice of Apparent Liability for Forfeiture ("NAL") in the amount of nine thousand five hundred dollars ($9,500) to Mr. Kramer for the noted violations. Mr. Kramer filed a response to the NAL on August 14, 2001. II. BACKGROUND 3. In February 2001, in response to a complaint of a CB radio station operating with excessive power in Oklahoma City, Oklahoma, the Dallas Office sent agents to investigate and locate the source of the transmissions using direction finding equipment. In the course of two days, the agents observed a series of transmissions on CB channel 19, and traced the source of one of the signals to Mr. Kramer's residence. The agents traced the source of another one of the signals to a multiple story building. The source of the last observed signal was traced by the agents to Mike's Cycle Shop, a business owned by Mr. Kramer. The agents conducted inspections at the multiple story building and Mike's Cycle Shop. The inspections revealed that Mr. Kramer violated Section 301 of the Act by operating radio transmitters from both locations without authorization. Mr. Kramer admitted to making the transmissions at all three locations, and voluntarily relinquished the equipment from the multiple story building and Mike's Cycle Shop to the investigating agents. On March 12, 2001, the Dallas Office issued two Notices of Violation to Mr. Kramer. In response to the Notices of Violation, Mr. Kramer acknowledged the violations, and indicated that he would discontinue operating the station. In March 1998 and October 1999, agents monitored and inspected similar stations operated by Mr. Kramer. On each occasion, Mr. Kramer voluntarily surrendered the equipment. 4. On July 13, 2001, the Dallas Office issued the captioned NAL to Mr. Kramer for operating radio transmitters without Commission authorization in willful and repeated violation of Section 301 of the Act. In his response, Mr. Kramer requests an explanation as to how the amount of the NAL was determined, and contends that the forfeiture amount is excessive. Mr. Kramer states that he sent a letter indicating that he would discontinue operating the radio station equipment, and has disposed of his equipment. According to Mr. Kramer, the proposed forfeiture amount is unfair in light of the other CB radio operators in the area. III. DISCUSSION 5. As the NAL states, the forfeiture amount in this case was

assessed in accordance with Section 503(b) of the Act, Section 1.80 of the Commission's Rules ("the Rules"), and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999). In examining Mr. Kramer's response, Section 503(b) of the Act requires that the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require. 6. Mr. Kramer does not dispute the finding in the NAL that he committed the violation that led to the forfeiture. The base forfeiture amount for each occurrence of unauthorized or unlicensed operation is $10,000. 7. We are not persuaded by Mr. Kramer's arguments that the forfeiture amount is excessive and unfair. The Dallas Office has received complaints regarding his operations. Additionally, after inspections of similar operations by Mr. Kramer on two separate occasions in March 1998 and October 1999, Mr. Kramer voluntarily surrendered the offending equipment and on at least one occasion stated that the violations would not be repeated. Nonetheless, our investigation revealed that Mr. Kramer again violated our rules in February 2001. Thus, imposition of a forfeiture in at least the amount of $9,500 is warranted. IV. ORDERING CLAUSES 8. Accordingly, IT IS ORDERED that, pursuant to Section 503(b) of the Act, and Sections 0.111, 0.311 and 1.80(f)(4) of the Rules, Klaus D. Kramer IS LIABLE FOR A MONETARY FORFEITURE in the amount of nine thousand five hundred dollars ($9,500) for operating radio transmitters without Commission authorization in willful and repeated violation of Section 301 of the Act. 9. Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act. Payment shall be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission, to the Federal Communications Commission, Forfeiture Collection Section, Finance Branch, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should note the NAL/Acct. No. referenced above. Requests for full payment under an installment plan should be sent to: Chief, Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554. 10. IT IS FURTHER ORDERED that, a copy of this Order shall be sent by Certified Mail, Return Receipt Requested, to Klaus D. Kramer, 2212 SW 29th Street, Oklahoma City, Oklahoma 73119-2118. FEDERAL COMMUNICATIONS COMMISSION David H. Solomon Chief, Enforcement Bureau

Tim, the reason it is rarer is because of the golden screwdrivers that have been in the radios, guys tweak pots they have no idea what they are for, truth be told.

Dick, sometime you have to explain to the group why a single sideband radio made for amateur radio sounds 'lousy' on ancient modulation. Explain bandpass filters. Explain that not all of the filters fall in exactly the same place so that some transceivers sound 'muddy' whilst others almost totally lack in base. I just finished a 12 hour shift - it was so much fun I'm going in tomorrow (8 hours and 50 minutes from now) to do it again - and I'm too tired to explain it.

73 from Rochester, NY
Jim

ps - with high level modulated AM, all the filtering is in the audio line - man, you can get a 50 to 10 KHz response (almost hi-fi) if you want to. Let's not get into FM.

> Let's not get into FM.

There are several ways it can be done, all of them relatively half-vast compared with the effort expended for decent SSB and to some extent dependent on whether the parts are cheap in Guandong province China. It also depends on whether the receiver circuitry is also being sold separately and can stand some of the costs. Where one can listen to Gene Scott on his ham rig, a wide bandpass filter and some form of cheesy detector is a given; AGC derivation is another issue.

If the rig is going to be sold as a Marine or some other HF application it is wise to note that outside of CB, Ancient Modulation is not common and will be left off that rig and has to be for type acceptance; in fact it is

legal only on CB and the ham bands (6 kHz maximum width) and illegal everywhere else on HF. The lowest legal FM freq is 25 MHz and again is 6 kHz or about 1.5 kHz deviation legally on the ham bands where it possible but improbable. So it is a pretty fair bet no one is going to bust hump to take a giant leap backwards for Antique Modulation or fiddly fart with FM. He will do just enough to keep the marketing trolls happy while pleasing the Accounting gnomes.

Think for a moment why the Marketing trolls care. It is characteristic of modern manufactured items to have a very high front-end cost with fairly low unit costs. One Ford guy talking about the original Escort when asked what it cost to make them replied "The first one cost us $7 billion, from there on they are about 2500 each." So incremental sales are where the profits are and the illegal market is a biggie both directly and to improve the resalability of the rigs (study how Chevy overcame Ford's big cost advantage by stressing resale). So pure and simple the capabilities are there for the illegal market.

But the illegal market is not generally considered to be particularly bright and with reason so there is not a lot of money put into it; one does not cast real pearls before fake swine. There is no payoff in being the only sane man in the asylum.

Dick N BK

I'm assuming this is the age old topic of whether or not to lock/unlock the clarifier circuit in a cb or export unit.

If correct, I'll add my vote in favor of locking the clarifier circuits together between the tx and rx. This allows the rx and tx to track each other.

If this is done, no one will need to use a rit and all units in the same conversation will be as close to on freq. with each other as is humanly possible. The only variables at this point will be the human ear and poorly modified radios in which the clarifier voltages shift a few percent between tx and rx.

This mod does not change or fix the inherent drift of the xtal circuits used in the clarifier circuits.

Because of the differences in how each person hears SSB is why you need the clarifier unlocked. One person may like the pitch a bit higher or lower so will adjust his receive frequency. If the clarifier is locked, then the transmit frequency has also been moved so when he transmits, now the other station(s) hear him 'off frequency' and retunes his signal. Now they are 'off frequency' for the first station so he retunes again, and again moves his transmit frequency, ect., ect., ect. Now every one is chasing each other around the frequency. With the clarifier (Receiver Incremental Tuning) unlocked, everyone can adjust the received signal to their liking with out changing the transmit frequency. That is what the RIT is for.

Bill Eitner wrote:

I don't disagree with any of this, but I found my references for
the self-biasing design. If you want to explore that some more,
let me know. I think our previous disagreement was with Class C
in it's strictest sense. With self-biasing, the amp is only Class
C until a carrier based signal is applied to the input. Then, the
bias that develops is enough to cause the amp to run in a linear
fashion. I know it sounds strange, but I can back it up with ref-
erences and explanations of how it works. The proof is in the
pudding. The best way to know for sure would be to remove the
manufactured bias from an amp that's running in a carrier mode
(AM/FM) and see what happens to the harmonic content. My spectrum
analyzer is dowm right now, but as soon as it's back in operation
I'll try it. Anyone else reading this is welcome to do the same
thing and let us know your findings.

Bill <nospam> got to this before I did. Bill you explain it fine but it is
beyond
Eitner's understanding.

I believe Eitner is teaching a class of newbies and or taking one maybe.

He sure uses a lot of new talk for some BS explaining. He has to be
gettin' it
somewhere.

Look out for his self-biasing BS it's coming next. Hope he figgers out
that self-bias
is very misleading in a general sense since bias by its nature refers to
DC and is a constant.

An' you just wait til he gets his spectrum analyser, ?, workin'

If you plan on using your radio on one channel your LIL Wil will be fine. But if you want to take advantage of the rest get the 1000. As for swr meters i use a PDC 600. It is a little expensive but you also get a power meter and Modulation meter also. If it helps I am a licensed ham. Bill in Sacramento KF6WXJ

I *was* interested.
however, there are no guarantees that the radio hasn't been *worked* on
by "unqualified" persons (such work being to increase the power levels or
increase operational bandwidth).

in any case, you appear to be rather desperate to sell (given 3 price
changes in 4 days). bring it down about $30.00 and I'll *seriously*
consider it (but it has to be in WORKING condition).

heh.
that might work if their mailboxes start getting flooded (snail mail and
otherwise).

however, letters aren't enough. sometimes it takes a lot of pull from one
place or another (large organization, prominent political figure, etc).

I know Riley hollingsworth really has his hands full with some of the
commercial stuff, but still...

ok,
that I wasn't completely aware of.
thanks for the info.

meanwhile, back on the band.
anyone notice that the bands were in real heavy after about 1800 GMT?
I tuned around on the frg-7 and couldn't hear anything but static below
17 Mhz and it got progressively noisier above that (signals, heterodynes,
etc). 11 meters was absol;utely crowded and 10 had a real load of
foreighn dx on it.

sunspots perhaps?

>> > in it's strictest sense. With self-biasing, the amp is only Class
>> > C until a carrier based signal is applied to the input. Then, the
>> > bias that develops is enough to cause the amp to run in a linear
>> > fashion.

Here he is confused about the term "self-biasing". Self-biasing is NOT created by the input signal, it is created by the flow of current through the active device. It does NOT make the base of a ground-bias amp more positive with respect to the emitter by simply applying a signal to the base. The page Toll referenced does an excellent job of explaining what self-bias REALLY is.

>> > ....I know it sounds strange, but I can back it up with ref-
>> > erences and explanations of how it works.

He never does, not suprisingly.

>> > .....The proof is in the
>> > pudding. The best way to know for sure would be to remove the

> a much higher harmonic content to the signal when viewed on a
> spectrum analyzer. Once again, I don't recommend using a Class C
> amp for the amplification of SSB signals. It will work, but the
> output audio is distorted and the RF portion is harmonically rich.

His entire theory is garbage because his "pudding" is sour. If the
two-tone test does not provide full modulation then there won't be the
distortion he is looking for. As soon as you exceed the modulation
index where the modulation peaks below the bias potential (which does
not change), your spectrum analyzer is going to look like a bad acid
trip. And THAT'S a fact that anyone with the equipment can verify for

themselves simply by maxing out (but not clipping) the modulation.

Now I can see that this whole fallacy is based on the notion that because the BE junction acts like a rectifier, and because current flows when the base is positive, it will bring the base up to bias potential. ABSOLUTELY WRONG!

As BobC proved by practial example, the exact opposite is true. The base current will cause an excess of electrons to be developed at the base, and unless those electrons are quickly removed before the next cycle, the resulting negative charge pulls the signal more NEGATIVE, pulling the bias more NEGATIVE, DECREASING the conduction angle, and pushing the transistor's operation deeper into CLASS C!

DC-DC converters frequently use rectifier-capacitor circuits to get both positive and negative voltages, depending on which way the rectifier is pointed. And in the case of a bipolar NPN ground-bias common-emitter amp, the BE junction is pointed in the WRONG direction to develop a positive charge!

This is REALLY EASY to test: measure the base potential with a signal applied, just like BobC did!

Well, Toll, if you want to properly debate a subject, here you go.

That's the same page you provided before, and I have already addressed
it. Although after reading some of his other posts I can see that,
while he was technically correct on the issue of signal-biasing with a
constant carrier, he clearly didn't have any understanding as to why;
and his definition of "constant carrier" may have been, well, less
than accurate.

>As for the rest of your drivel, I will answer that at a later date. Work
>comes early tomorrow.

Take your time to explain why my comprehensive answers are drivel. You
might also explain why you haven't given any comprehensive answers to
anything, just bad references and unsupported opinions.

Sorry Train, I misread your post, thought you said "skip talking
on FM is also out of the question", did not see the "not".

I dunno, but you can ask the folks down on ch. 27. There's a pretty
large FM net there most nights of the week.

I'd personally support the creation of a shared 11-meter band from,
let's say, 27.4051 MHz through 27.6999 MHz. I agree with Dick and
Aaron re. the likelihood of this ever actually coming to
fruition...but alas, one can still hope. Power limit of 50 watts and
yes, clarifiers "unlocked." Licensed amateurs would be permitted to
use their amateur gear and help others, should they so request.

Perhaps the ONLY good thing that may come from the removal of the ITU
code requirement for HF is that those opposed to lifting the 155.3 mi.
limit on CB no longer have this as their crutch. But don't hold your
breath for any of this to actually occur.

I'd also support the immediate allowance of licensed amateurs (General
and higher) to use their equipment on the "legal 40." Frequency, mode,
and power limitations would still be observed though. Drop that
Kenwood or Icom down to 12 watts and don't "slide" all over the place

and no harm done. I know, I know...;-)

As stated by Chuck Dachis in his book Northrop was producing para-military eqip. much of it in El Paso, TX. For all practical purposes the last Ham radio item produced by the Northrop/Hallicrafters was the FPM-300 in 1972, and a few accessories through 1974. There were also some CB units and AM/FM sets of Japanese origin relesed under Hallicrafters name. At this point Northrop/Hallicrafters turned over to its partner, Wilcox. Then on On Dec 4,1975 Wilcox sold the Co. to Braker Corp of Dallas TX and they moved the supplies and biz to Grand Praire, TX . They set up shop with some former Hallicrafters employees of the late 60s and released a few more CB and other Japanese and Tiawan produced radios threw them. Then Braker went belly up around 1980. Then other aquired the Hallicrafters name.

I found at least 3 script errors on the first page alone. There is at least one on every page I looked at. No right click on the pictures was a nice touch no not as safe as you might think. Just migrating the pages from the old free site to a real server (if you're using one) requires a few things to be reset.
Nice Dave prices.....LOL
The lifted WAV file on the pages is also annoying to anyone who logs onto the site.
Good luck with it!
Mr NastyFinger

Dearest Middlefinger,

Please learn to post correctly to Usenet. I.e. Add your points
immediately below reposted articles that have been trimmed to salient
points.

I know Outlook Express users rightly consider themselves exempt from the
appropriate RFCs because scrolling and snipping is such an
intellectually challenging exercise that few are equal to, but if you
could at least give it a try...

It means moving your mouse about. It can be done if you apply yourself
and I promise that it won't bite!

Unless things have changed drastically in the last several yrs, I can't understand the problem.

The issue you've described only happened rarely and usually was the result of an improperly modified rig or a defective unit. Still more rare was the operator with a tin ear who just couldn't quite get it right on.

I can't vouch for the remainder of you but I've been tying the tx/rx circuits together since the early seventies. I do this for myself and for all the customers I've ever serviced for. I can't think of anyone who, with a little practice, couldn't master tuning a ssb rig to the remainder of the group.

In practice, I found it more irritating to have that one person with a untied clarifier tell the rest of us that we were the ones off frequency when we all sounded good to each other.

Having the rit and xit not tied together is ok when there's only two of you in the conversation. But, when a third person joins that's when the knob twisting starts. Invariably, the two original stations were probably not using the exact same tx frequency, due to sloppy alignment either at the factory or on a bench, and were compensating for this by using the rit.

I have the answer to all of this. Let's borrow a technique used in ACSB. Let's all tx a pilot tone at 1/10 of max output power and use it to automatically lock each other's rcvrs together. Not hard to do in practice and reduces or eliminates the necessity of learning how to use your radio's tuning knobs. What do ya think?

About the only thing I know is that Hallicrafters was once associated
with Radio Shack, but that was back when RS was based in Boston, not
Fort Worth.

Most of the glory years of Hallicrafter's were spent in the Chicago area. As I remember in the 50's National was in Malden, MA, Collins in Cedar Rapids[where Rockwell Collins has a significant presence today] Hammarlund was in Mars Hill, NC [I thought they originally were in NY.] Johnson Viking was in Waseca, MN, Globe King in Council Bluffs,IA [and associated with World Radio Store(Leo Meyerson). There was a small pioneering SSB firm called Lakeshore which was making SSB gear before any on the biggies...it was in my hometown of Manitowoc, WI. Their chief engineer was one of my hamming mentors when I was a kid, just licensed in 1956 at age 13. He later went with Gonset.

At the risk of shocking our colonial cousins, Usenet is a global
community with one set of common sense, easy-to-follow conventions,
designed to ensure that its essential forum nature is preserved
for people to freely exchange views and comments in a manner
understandable to the majority. Without conventions in communication we
would never be able to communicate. Usnet's conventions were evolved
primarily in America.

3.1 User Guidelines

3.1.1 General Guidelines for mailing lists and NetNews

If you are sending a reply to a message or a posting be sure
you summarize the *original at the top of the message*, or
include just enough text of the original to give a context.
This will make sure readers understand when they start to
read your response.

Since NetNews, especially, is proliferated by distributing
the postings from one host to another, it is possible to see
a response to a message before seeing the original. Giving
context helps everyone. But do not include the entire
original!

One problem is that many of the upside-down posters don't bother
to trim attributions; they stick their comment at the top and
leave everything trailing below so that one is never sure what
point in a multiple attribution repost they're actually responding
to.

The considerate poster, and there are many on these newsgroups,
will show a trimmed attribution and his or her comment below
after a white line separator.

You've no idea of the havoc that upside-down postings causes with text-
reading programs for the blind such as JAWS.

Visit one of the more academic newsgroups in which posts are
frequently responded to point by point, and you will see just
how important chronological posting is.

The Purp Leonion is a nobody. Just delete all "his" messages and just skip "George's" messages and anyone with "Google" in the header.

When I hit one of the asshole's messages, I just sort by sender and mark them all read. Then I change back to threaded view. This method kills about 1/3 of the messages and most of the trash.

Hurry and see if you can make the reserve price!

So 374 is only 51 less then 425.

Baltimore huh? Are you a 14'er?

I can email you a good addy.

Thanks for the warning... but I copy you loud & clear. If a tree falls in the forest and no one is around to hear it, does it make a noise? Voobner sounds to me like the type of character who would answer that yes, it does--- a mighty loud noise, and he can't STAND it!!! Yes, I have sneaked into that forbidden place---the Mind of the Censor. I know how it works... not a happy place to be. These types are prone to McCarthyism.

But I digress... how exactly does it detriment someone else if some guy says the F-word on CB, or on ham radio or network TV for that matter? (Don't give me that "protecting the children" excuse either, because most kids *I* know have a whole bunch of cusswords I NEVER read in any dirty-dictionaries.) I must be out of my tree or something, because I just don't get how on-the-air cussing can be so hurtful to some old geez who tunes in and hears it, even though I'm a ham and I don't cuss on the air (so much for evidence-gathering). Now, *threats* are another story... where I come from, you treat a threat as a promise---but you don't transmit it unless you're gonna do it. Amen!

Message-ID: <a3aagm$15puon$1@ID-20128.news.dfncis.de>
Source record: 114219

I feel the "lil-wil" is the best magnet mount antenna made, if you need to replace it
then replace it with the same. Magnet mount antennas have a base-loaded coil which is the worst performing of all the loaded antennas. Magnet-mount antennas use inductive coupling to obtain their counter-poise aka ground-plane aka reflector.
If performance is what you're after then you have to a change to a center-loaded,top-loaded or a 9' whip. Top-loaded antennas are better than center-loads and the 9' whip beats them all. The big factor determining loaded antennas performance is the placement of the coil. The top-loaded antenna has less signal attenuation because the loading coil is placed at the top or end of the antenna. Loading coils do not radiate RF energy, all they do is create heat and make the antenna electrically longer.
Loaded antennas are a compromise any way you look at it.
Magnet- mount is by far the worst of all the loaded antennas.

Looking for webpage's with info on the Emperor 5010, stuff with specs,
mic pinouts, mods, whatever you have or can email me the info.

Thanks

REMOVE the NOCRAP in my address to reply.

You know what is truely stupid? Flaming the newsgroups with no purpose other than feeding one's own ego. Frankly, I've had more fun bunny hunting with CB than almost anything else in the communications hobby. Seems some people (Voobner, et al) just enjoy causing problems. Of course, some CBers take a few loose cannons personally and then flame the hams. Of course, one could simply say 'live and let live', but the fact is there are good people out in cyberspace (along with a few loose cannons free on a weekend pass from Bellvue) - and wouldn't it be nicer to have a few more friends than a few more enemies? Just a thought .... Maybe we should let the spammers alone and then they just might get tired of not having responses.

73 from Rochester, NY

3940. Re: Hamboz sent to CB NewsGroup to recruit!

Newsgroup: rec.radio.cb
Date: 2002-01-31 04:05:49 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <_z368.709$E4.176907@e3500-atl2.usenetserver.com>
Source record: 114238

Hmm,

I wonder why it was that they called upon the HAMS to assist the Disaster relief efforts during 9/11? I wonder why it is that when there is a hurricane in the Carribean, it is the HAMS that get the word out and pass traffic for the authorities. I wonder why it is the HAMS that do the phone patches for the soldiers overseas instead of CBers? One of the funniest things I ever read on the newsgroup was this quote (more or less accurate), "We didn't git no traffic to pass fer the author'ties, but we wuz a-standin' by on 27.555 fer e-mer-gencee traffic". LOL! I wonder why he never got anything to pass? Because the hams had already handled it! LOL!

(Sorry, I couldn't resist taking the bait!) It's all in fun!

> Magnet- mount is by far the worst of all the loaded antennas.
> --
> 714 Sandpile,

With a single exception you got it right. Because there is more current
at the bottom of the antenna a given inductance will have more effect at
the base than anywhere else. Center loading for a given length requires
twice the inductance that a base loading which can give you some
interesting mechanical problems at 80 mph or so.

Top loading is not done with coils because the inductance would have to be
enormous, theoretically infinite in fact. The oldest top-loaded vertical
is the Marconi which might give you some idea of its age; this is the many
horizontal wires you see in old movies with a single feedline against
ground. What looks like the feedline is a vertical radiator with all the
wires being a 'capacity hat' to extend its electrical length. There is a
related antenna developed by a Bell telco engineer that featured a single
top hat fed off center; to this day off-center feeds are called 'Windoms'
even when there are dual feedlines and a center insulator. Point of all
this is that top loading is done with capacity hats.

The advantage of loading further up the antenna is that it does not
disturb current flow and it is the current that does most of the useful
radiation. You also get better bandwidth. The advantage of base loading

is that you can tap the coil for impedence matching which in CB circles is a major fetish. Top loading is indeed the best of all worlds but can be a mechanical nitemare in a mobile not to mention getting you attacked by the anti-alien squad.

Continuous loading produces helical dummy loads.

I actually worked in the Grand Prairie Plant then, dam what a bunch of screw ups, they seamed to have some connection with Peterson Scanners also, one of the first scanners on the market. They keep building some old gear for the military and the only engineer they had tried to develop a CB ,and keep having problems with the modulator circuit, He was a Ass hole from the north east and hated Texas. They tried to get into the fire alarm, antenna market, and what ever else came in.

The first thing you should do is contact the FCC and CISPR. They have
literally thousands of reports of RFI disrupting emergency services,
and much of it caused by unauthorized transmissions. Then check out
the FAA:

http://www.faa.gov/ats/aaf/asr/asr100/rfi.htm
http://www.faa.gov/avr/air/asw/fadecplcy3.jrc.drft-memo.htm
...and a couple hundred more articles on EMI and RFI. The FAA also has
piles of RFI and EMI reports on file, available on request.

Here's a few more pages for ya, both directly and indirectly related
to harmful radio interference:

http://www.rvs.uni-bielefeld.de/publications/Reports/EMI.html
http://www.info.gov.hk/gia/general/199901/22/0122063.htm
http://cyberskies.com/feb1998/holding.html

THAT'S why there are specific frequency allocations!

THAT'S why there are power limitations!

THAT'S why there are such strict standards for specral purity!

THAT'S why an FCC violation can cost you $17,000!

Because IT AIN'T JAYWALKING!!!

Source record: 114229

Let me quote one just for you, twistie:

http://www.yorkemc.co.uk/Technical/Papers/Docs/Emv99/emv99.htm

"EMC of Medical Equipment
Dr Martin P. Robinson University of York, Heslington, York

N. J. Wainwright York EMC Services Ltd., University of York,
Heslington, York

EMV'99 Dusseldorf, Germany

1 Introduction

Is EMC of medical equipment a problem? Although electrical
interference is often no more than a minor nuisance, some EMI-induced
failures have certainly lead to injury or death. Some examples:

In 1992, a patient attached to a monitor-defibrillator in an ambulance
died because interference from the ambulance radio prevented the
machine from working [1].

In 1987, patient monitoring systems failed to sound alarms because of
interference; two patients died as a result [2]

In 1993, a patient fitted with a pacemaker went into ventricular
fibrillation shortly after being scanned with a metal detector outside
a courtroom [2].

In the USA, the Food and Drug Administration (FDA) collects reports of
medical equipment failure. Jeffrey Silberberg of the FDA's Centre for
Devices and Radiological Health states that between 1979 and 1993
there were over 100 reports attributed to EMI [2]. These include
interference to a wide range of devices, including ECG, ventilators,
infusion pumps and apnoea monitors, from a variety of sources
including electrosurgery, fluorescent lights and radio transmitters.
The EMI reports form only a small portion of the 95,000 incidents
reported to the FDA each year. However Silberberg and others believe
there is widespread under-reporting of EMI incidents.

..."

Is that enough proof for you? Do you want more?

Here's another one, twist:

http://catless.ncl.ac.uk/Risks/5.56.html#subj1

" News article on EMI affecting Black Hawk helicopter
John Woods <jfw@EDDIE.MIT.EDU2>
Sun, 8 Nov 87 20:18:27 EST
(Well, after the reports of the President's plane affecting people's
garage
doors, I guess it is appropriate that we are able to return the
"favor"...)

Radio waves reportedly can down copter
By Mark Thompson, Knight-Ridder Service
(From the Boston Globe, 8 November 1987)

WASHINGTON - The Army's most advanced helicopter to carry troops into
battle
can be knocked out of the sky by routine radio waves from microwave
towers, radio antennas, and radars, according to Pentagon officials
and
documents.
Investigators believe such radio waves made five of the Army's
UH-60 Black
Hawks nosedive into the ground since 1982, killing 22 servicemen. The
problem could be even more devastating in wartime, they said, because
the Soviets are perfecting a radio-wave weapon to exploit the
vulnerability.
"We've got a very sophisticated electronic aircraft, and if the
radiation we're putting up in peacetime -- microwaves, antennas, TVs
--
is causing the aircraft to flutter and wobble, then -- and I don't
like
to talk about this because it is kind of a breach of security -- we're
going to have problems in wartime," said Jerry A. McVey, a former
Army
major who led the investigation into a still-unexplained Black Hawk
crash last year.
Radio waves in the air can enter the helicopter's wiring and
electrical components and generate false commands that can range from
simply flashing the warning lights to sending the craft into a fatal
dive.
The Army recently warned its Black Hawk pilots that flight near
radio
towers can cause unexpected dives that could endanger the $6 million

aircraft.
"Pilots should be made aware that flights near microwave antennas or shipboard radar may cause uncommanded attitude changes," the Army told its pilots in August following extensive tests earlier this year.
..."

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

The Hallicrafters Company was bought out by Braker Corporation of Dallas, Texas in 1975 and the whole company was moved to Grand Prairie, Texas. They made a few CB's and put the Hallicrafters name on various portable Japanese radios. The Braker Corp. went belly up in 1980, and the Great name and legacy of Hallicrafters along with it. I hope this sheds a little light for you.

You want to see a "censor" in action on this NG? Mention that
freebanders steal frequencies or amps are illegal on CB. You will get
"censored" you so fast your head will spin.

Let me anticipate Twisty's response. RFI to emergency services from CBers does not exist because:

a) he's never heard anyone talk about it on freeband
b) if it did exist it would spoil his fun
c) "bird watts" don't interfere
d) no one ever complained to him personally

Try providing proof that EMI from a particular source is killing people and
then you will be getting somewhere. Until you can provide indisputable proof
of the ORIGIN of the EMI, you're just blowing smoke up the collective asses
of those stupid enough to go along.....You ought to know by now I'm not
part of that group nor am I going to get into some bullshit argument over
semantics you're so fond of starting.

Get a 5000.. Much better antenna by the same company. I run a 5000, my dad got a lil wil so it would scratch the ceiling under the garage when he pulled in. Never worked nearly as good as my 5000 did, receive or transmit.

.....
I feel the "lil-wil" is the best magnet mount antenna made, if you need to replace it
then replace it with the same. Magnet mount antennas have a base-loaded coil which is the worst performing of all the loaded antennas. Magnet-mount antennas use inductive coupling to obtain their counter-poise aka ground-plane aka reflector.

I have lots of CB Radio equipment for sale..... Just sitting there and not being use. All for $300.00 but you also have to pay for shipping.

Here we go :

Emperor TS- 5010 with matching Power Supply TS-5011

D104 Silver & Black Eagle... Plus 1104C Desk Mic. Yes...3 Mic's !!

Astron MS-35A, Samlex RPS 12 15 amps. Yes 2 Power Supplies !!

RMS International SWR/Watt Meter with Match Box

RF Limited TV Low Pass Filter

Bonus !!!!

Uniden 800xlt scanner radio !!

All Must Be Sold Together !

What a coincidence. This is the same contact info to debunk your lies
concerning cb interfering with emergency communications. As you said,
you have neither substantiated NOR provided a single reference that
backs anything you say. That's because it's 100% bullshit.
-
The first thing you should do is contact the FCC and CISPR. They have
literally thousands of reports of RFI disrupting emergency services, and
much of it caused by unauthorized transmissions. Then check out the FAA:
-
Never disputed that. What I disputed was the claim that CB is
interfering with emergency communications..such as the lies given here.
You did a quick back jump, as nobody claimed RF interference didn't
exist. Cb interference to emergency comms hasn't happened in quite a
long time (you should know why if you are up to date).
Bottom line is the FCC will get involved if it occurs. They have made it
more than clear that they usually will not get involved with cb problems
unless it is a safety issue, an example being interference to emergency
comms. Protocols exist (such as with the state police) that as soon as
the source of interference is determined to be of origin other than with
the depts. equipment, a report and case number is assigned and it goes
to the FCC. To hear you repeat something over and over just 'cause you
want it to be true so bad doesn't make it so. You're links don' show any
of the examples you claimed happen? Why is that? Now reach way down and
tell us why the FCC has no clue concerning these cb interference
complaints of late. Because they didn't happen. I'll even permit you to
search the last year for an example and you still won't find anything.

Let me quote one just for you, twistie:
http://www.yorkemc.co.uk/Technical/Papers/Docs/Emv99/emv99.htm
"EMC of Medical Equipment
Dr Martin P. Robinson University of York, Heslington, York
N. J. Wainwright York EMC Services Ltd., University of York, Heslington, York
EMV'99 Dusseldorf, Germany
1 Introduction
Is EMC of medical equipment a problem? Although electrical interference is often no more than a minor nuisance, some EMI-induced failures have certainly lead to injury or death. Some examples:
In 1992, a patient attached to a monitor-defibrillator in an ambulance died because interference from the ambulance radio prevented the machine from working [1].
In 1987, patient monitoring systems failed to sound alarms because of interference; two patients died as a result [2]
In 1993, a patient fitted with a pacemaker went into ventricular fibrillation shortly after being scanned with a metal detector outside a courtroom [2].
In the USA, the Food and Drug Administration (FDA) collects reports of medical equipment failure. Jeffrey Silberberg of the FDA's Centre for Devices and Radiological Health states that between 1979 and 1993 there were over 100 reports attributed to EMI [2]. These include interference to a wide range of devices, including ECG, ventilators, infusion pumps and apnoea monitors, from a variety of sources including electrosurgery, fluorescent lights and radio transmitters. The EMI reports form only a small portion of the 95,000 incidents reported to the FDA each year. However Silberberg and others believe there is widespread under-reporting of EMI incidents.
.."
Is that enough proof for you? Do you want more?
-
-How about quoting just one that lends credibilty to anything you said concerning cb interference to helicopters or emergency comms? You can't.

" News article on EMI affecting Black Hawk helicopter John Woods
<jfw@EDDIE.MIT.EDU2>
Sun, 8 Nov 87 20:18:27 EST
(Well, after the reports of the President's plane affecting people's
garage
doors, I guess it is appropriate that we are able to return the
"favor"...)
Radio waves reportedly can down copter
By Mark Thompson, Knight-Ridder Service
(From the Boston Globe, 8 November 1987)
WASHINGTON - The Army's most advanced helicopter to carry troops into
battle
can be knocked out of the sky by routine radio waves from microwave
towers, radio antennas, and radars, according to Pentagon officials and
documents.
Investigators believe such radio waves made five of
the Army's UH-60 Black
Hawks nosedive into the ground since 1982, killing 22 servicemen. The
problem could be even more devastating in wartime, they said, because
the Soviets are perfecting a radio-wave weapon to exploit the
vulnerability.
"We've got a very sophisticated electronic aircraft,
and if the radiation we're putting up in peacetime -- microwaves,
antennas, TVs
--
is causing the aircraft to flutter and wobble, then -- and I don't
like
to talk about this because it is kind of a breach of security -- we're
going to have problems in wartime," said Jerry A. McVey, a former Army
major who led the investigation into a still-unexplained Black Hawk
crash last year.
Radio waves in the air can enter the helicopter's
wiring and electrical components and generate false commands that can
range from simply flashing the warning lights to sending the craft into
a fatal dive.
The Army recently warned its Black Hawk pilots that
flight near radio
towers can cause unexpected dives that could endanger the $6 million
aircraft.
"Pilots should be made aware that flights near microwave antennas or
shipboard radar may cause uncommanded attitude changes," the Army told

its pilots in August following extensive tests earlier this year.
.."
Need some more?
-
More? Hahaha! No, just one mentioning cb and interference to emergency comms would do it. Having problems backing what you say again, Sparky?

I come up with proof that radio interference can and does kill people,
and that's all you got to say? I need to set the RTC on my computer?
You're a real prize, Train!

-
Where? We all missed the part about a cb doing it, which was your
original claim. You apear to have dropped the word "cb" from your poor
examples you are attemtping to put forth as validity for your bullshit.
Referring to that comical piece about the army helicopter (comical ONLY
because you find something concerning radio waves and attempt to blame
it on cb) only serves to reinforce the frequency of your lies.

I don't sweat the small stuff. Each forge of me confirms the magnitude of what I wrote in the original Sporadic Waves article. Without question the article hit it's mark and then some. It stung some so bad as you can see, that it actually became an ingrained part of their lives. As we also see, it so incensed a few that they can think of nothing else. The pattern is always the same..someone makes a bogus claim and when it happens to be me that debunks it, the forges come out in an effort to divert away from the original thread. Nothing is as good as unparalleled success, and I must admit to a guilty pleasure I experience whenever the semi-challenged among us act up and unintentionally become my PR committee. What more could I ask for than someone trying to make me look bad by posting that article but achieving the polar opposite? <g>

Moped, what is this you are trying to prove, that I posted from my
@home
thru mailgate?
Of course I did using my same @home account that i always post from,
In case
you are wondering the info on this account was emailed to me. And
since you
know @home's NG are suffering from the transition to Comcast.
From what I gathered it sounds like it may be a group account since
whoever
BadBoy1 is he must have signed on with it too. But like I said earlier
I
havent posted from google or aol, unlike you that is. Yes indeed do a
google
search by al means, bring to light all these posts of mine.

Is this all you have got for a guy(me) who supposedly screwed up the
NG for
months. Is this the best you can do?

Dennis #12 is the one they want, not me. However you can't even give
out his email you're so paranoid about his illegal dealings.

Besides, you have MY name. You have my family home page. You could get
my phone number. It isn't my fault you are too lazy to try.

>search the last year for an example and you still won't find anything.

Here's a really simple logical argument for you, twist. Let's see if
you can fill in the blank:

Fact: CB amps cause RFI;
Fact: RFI causes problems, even death;
Conclusion: .....?

Are you so detached from reality that even after those examples you
can't even acknowledge the seriousness of the issue? Are you so
conceited that you think it's ok to risk the lives of other people
just so you can see some "swing" and "bird watts"? Are those the

things that are important to you, twist? How does a person get to be so desocialized that innocent lives become trivial? Even if I came up with rock-solid, undisputable proof that somebody died because of someone using an illegal CB amp, you would still try and pick it apart, or complain that enough people didn't die to justify making such a claim.

You and train have shown your true nature by your responses in this thread, that you are a couple of antisocials that have nothing but contempt for the government and apathy for anyone else. So I guess my posts really did make a very good point, and there is no point in going any further. Enjoy your newfound popularity.

Are you saying that it was Hams that brought down those Blackhawk
helicoptors? Let's put this into perspective, twist. We were talking
about illegal operators, people that have no respect for the law,
other operators, or people's lives. Or didn't you read those
references I cited just a couple posts ago?

Why the hell not? An illogical assertion can logically be countered by the
same.

Let's put this into perspective, twist. We were talking
> about illegal operators, people that have no respect for the law,
> other operators, or people's lives.

No we're not asshole, we're talking about EMI (Elecrto Magnetic
Interference) and possible origins. You alledge it to be CB Radio and we can
alledge it to be Ham Operators. No proof of either has been shown!

Or didn't you read those
> references I cited just a couple posts ago?

Sure I did. Not a single fucking word of it said CB Radio in it anywhere!
Train

FYI, the Don Quixote-like personal crusade routine ultimately is no
more effective now than it was in Cervantes' time. What the rest of
the group are trying to tell you is, sometimes you have to give up on
a lost cause... if they want to rip up the CB channels with high power
and cussing, that's their business. Believe me, it's much worse on 2m
ham band---just listen in on SoCal's 435ers. Eventually, most will get
tired of the stomping, jamming, etc. and find another pastime. That's
why I haven't worked 2m for 6 years, or CB for 7!

More to the point, if the segment between 27.407 to 29 MHz is so holy,
the legitimate users should have made a more agressive effort in the
first place to take better care of their freqs by DFing the
freebanders and threatening to turn them in *to their faces*.

Mopar, serious question If I was aaron or all the people you guys give me all the credit, and if i posted from google and al the places you guys give me credit for for dont you think they would have shit canned me already? @home has been in touch with me when Twisty complained to them and when Landshark complained, other than that they have not contacted me. This should tell you a few things, either I am falsley accused, and there is no proof at my isp of me doing what you guys are saying. I know your not dumb, surely you can figure this out on your own.

And if mr handjob replys to this please don't quote her. I got her blocked 10-4?

No, the article said that the potential for interference was greatest around cell phone, broadcast transmitters and paging towers. It mentioned nothing about lower powered transmitters. Lets face it, high power CB is a very small percentage of users. High power would be something bigger then a 4 pill.

There is no need to go to anyones house and tell them they are causing interference, that's why the Federal Government has passed Laws so that the local police can take care of it. Why get your hands dirty when you don't have to? Lot's of the Keyclowns are in mobiles anyhow. It is easier to pickem off in the Ng Just like target practice. capeche. There is nothing unholy about Federal Law and 27.405 to 28 megs are not part of the legitimate 10 meter band. But the interference imposed on 10 meters is illegitimate.
btw, the guys causing the hate and discontent in so Cal on 2 meters are probably Terminal techs "take that as CBers who haven't or cannot pass the code" I wouldn't doubt there are many non hams jamming the repeaters. There are many illegally modded radios floating around the Cb chatrooms and this NG.

Scott are you saying there are not many amps bigger than a 4 pill out there? What about at Camp Lejune? there will be people from all over competing to see who's dick is the smallest. And who can put out the most RFI/EMI, but you guys have no lives and think this is something cool. Would you like a Ham in your neighborhood bleeding your telephone, stereo, TV or baby monitor toaster oven etc etc when you were trying to use any of them? Please give an honest answer only. would you think of this as an inconvenience or problem for you?

That's capacitive coupling.

> Loaded antennas are a compromise any way you look at it.

The problem with a loading coil is the inductance in it. This "chokes"
the current flowing along the radiator. Since power is current times
voltage, this decreases the antenna's efficiency.

> Magnet- mount is by far the worst of all the loaded antennas.

A magnet mount just decreases an antenna's efficiency. I properly
mounted antenna will outperform one with a poor ground or
insufficient groundplane.

From :Sparky@cet.com
Fact: CB amps cause RFI;
Fact: RFI causes problems, even death;
Conclusion: .....?
-
Conclusion remains the same: Your claims of cb interfering to emergency comms are bunk.

Are you saying that it was Hams that brought down those Blackhawk helicoptors? Let's put this into perspective, twist. We were talking about illegal operators, people that have no respect for the law, other operators, or people's lives. Or didn't you read those references I cited just a couple posts ago?
-
I usually don't read any of your references for the same reasons others don't..they're usually bullshit and have nothing to do with your original claims....Your claim was that cb interferes with emergency comms. Not illegalities or bootleg ops. Your claim is still wrong.
